

fischer 

Catalogue Fixing systems

Foreword

Dear partners,

many topics move the fixing industry. These include changes in construction methods, new and more frequently used building materials, and digitalization. As one of the world's leading companies in the fixing industry, we are therefore looking firmly ahead to continue to provide you with the best and most economical solution for your application. Our innovative strength and technological expertise from more than 70 years flow into the continuous further development of our products and services.

We place particular emphasis on the safety, quality and processing comfort of our products. Our product range includes plastic fixings, steel anchors, chemical systems, embedded fixing solutions such as cast-in elements and much more. We also have a broad range of screws, drills, adhesives, sealants and foams. Assortments tailored to applications, such as façade and thermal insulation composite systems, or sanitary, heating, ventilation and electrical installation complete the program.

With our wide range of services, we support you in all your fixing projects. Our sales representatives and application engineers guarantee personal and professional support. Our 50 companies in 38 countries bring us even closer to our customers. With our FiXperience design software and data for software applications (BIM, 3D), we support you in project planning.

Digital services, such as our plug finder apps, simplify the selection and use of our products. With a wide range of online and face-to-face training courses from our fischer Academy, you can always stay up to date with the latest fixing solutions and regulations.

We hope you enjoy discovering and using our products!

Armin Heß

Speaker of the Management Board Fixing Systems and Managing Director Sales and Marketing of the fischer group of companies

„Whoever chooses fischer receives more than a range of safe products. The aim is to always develop the best solutions for our customers across the globe.“

Besides the innovative products, this predominantly concerns support that is focused on the customer, and services designed to improve customer benefit.

A brand and its promise to perform.

Continious improvement

The fischer ProzessSystem (fPS) we ensure that we readapt and optimising our processes in line with customer requirements in a fl exible manner and on a continuous basis. Thus we are glad having been awarded with the 1. place “Excellence in Operations” within the challenging contest “Factory of the Year”.

Award 2015
Excellence in
Operations

Safety that connects. Decisive quality

We don't make any compromises when it comes to the safety of our products. A whole host of our products are distinguished by comprehensive, up-to-date and international approvals. The fischer product range is well-positioned in all sectors of fixing technology – Steel, Nylon and Chemical fixings. In awardwinning quality which continues to impress both professional clients and private customers with equal measure.

See ICC-ES
Evaluation Report
at www.icc-es.org

International approvals characterise many of our products.

Always on the pulse of time

At fischer, innovation is more than just a sum of the patents. We are open to new things and are prepared for change – always with the aim of offering our customers the greatest possible benefits. Over the years, our own development and production sites have been developing numerous fixing solutions for the most wide-ranging applications. Be it new production procedures or materials, such as renewable raw materials: We are carrying out the research for your safety and will continue to do so in the future. This gives us such great flexibility that we can even develop tailor-made customer solutions. This power to innovate has seen fischer become market leader in anchor technology and the fixing industry.

Our service to you

We are a reliable partner, one that will stand at your side and address your individual requirements with advice and action:

- Our products range from **chemical systems to steel anchors** through to plastic anchors.
- **Competence and innovation** through own research, development and production.
- **Global presence** and active sales service in over 100 countries.
- **Qualified technical consulting** for economical and compliant fastening solutions. Also on-site at the construction site requested.
- **Training sessions**, some with accreditation, at your premises or at the fischer academy.
- **Design and construction software** for demanding applications.

We take responsibility

Our active environment management policy means that we are helping to maintain an intact environment for our generation and for those that follow. The environment management policy at the Tumlingen site has been certified in line with DIN EN ISO 14001. It fills us with particular pride that in 2020 we have received the most important and largest award in Europe in the field of sustainability: the German Sustainability Award - category large companies. This was in recognition of our holistic approach and the strategic anchoring of our sustainability management. With our greenline products we have launched the first range of fixings on the market that is based on renewable raw materials to more than 50%.

Greenline assortment based on 50% regrowing raw materials

German Sustainability Award

Innovations to inspire professionals.

01 fischer bolt anchor FAZ II

For highest demands. Powerful and flexible.

Page 198

03 fischer adjusting washer FSW 10

To easily install wooden beams and timber sleepers.

Page 230

02 fischer concrete screw UltraCut FBS II 8-14

The high-performance concrete screw for absolute installation ease.

Page 224

04 fischer gas actuated fastening tool FGC 100

Quick and easy fastening in concrete and steel.

Page 638

05 fischer injection mortar FIS V Plus

The powerful universal mortar for concrete and masonry.

Page 90

06 fischer DuoLine assortment

Clever combinations for more power and intelligence.

Sustainable building

With the introduction of its greenline products, fischer is the first manufacturer worldwide to offer a range of bio-based fixing systems.

We are adapting to the demands of processors and builders who greatly value sustainability when building and renovating, even when it comes to installation.

Grown naturally

All greenline products are produced with at least 50 % renewable raw materials. These do not compete with food and feed products or with corresponding cultivation areas. The regenerative material percentage is always confirmed by independent testing and certification by the DIN CERTCO / TÜV Rheinland. All products are in the „BIOBASED 50 - 85%“ class.

Durably secure

We do not make any compromises when it comes to the security of greenline products. They have the same features and load-bearing capacity as the grey coloured originals. Just 100% fischer nylon quality - made in Germany!

Ecological proof of performance

The FIS Green has been classified in the best possible emission class: A+ „very low emission“ for volatile substances as per the French VOC directive. Ecological advantages that also pay dividends in competition.

We take responsibility

For decades fischer has been actively practising environmental protection and taking on responsibility so that the environment remains intact for future generations.

We have an environmental management system certified according to DIN ISO 14001 and are a member of the German Sustainable Building Council (DGNB).

The first range of fixing products with renewable resources.

General fixings

Universal plug UX Green
The nylon plug for all construction materials **28** 

Chemical fixings

Injection mortar FIS Green 300 T
Injection mortar for high loads **42** 

Special fixings

Expansion plug SX Green
The powerful nylon plug with 4-way expansion **31** 

Plasterboard fixing GK Green
The fastest installation in gypsum plasterboard **34** 

Hammerfix N Green
The hammer-in plug for simple, fast and economic installation **36** 

Aircrete anchor GB Green
Secure in aerated concrete **38** 

Insulation fixing FID Green
Thermal bridgefree installation in insulation materials **40** 

The fischer greenline product line has a green solution for every building material.

Universal plug UX Green

The nylon plug for all building materials

2

Mirror fixings

Pictures

Applications

- Pictures
- Lighting
- Skirting
- Light cabinets
- Towel rails
- Mirror cabinets
- Curtain rails
- Wash basin fixings
- TV consoles
- Plumbing and heating fixings

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- Just as effective, secure and durable as regular UX plugs.
- The universal operating principle (knotting or expanding) allows for use in all solid,

hollow and board building materials. Thus the UX Green is the correct choice for unknown base materials.

- Plug collar for anti-slip safety and saw tooth sides as turning lock ensure the highest installation safety.

Certificates

Building materials

- Concrete
- Gypsum plasterboard and gypsum fibreboards
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone
- Aerated concrete
- Chipboard
- Solid panel made from gypsum
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The Universal plug UX with rim is suitable for pre-positioned installation; the UX without rim is suitable for push-through installation.
- When screwing in the screw, the UX GREEN expands in solid building materials and knots itself into cavities.
- Suitable for wood and chipboard screws, as well as stud screws.
- The required screw length is given by: the plug length + fixture thickness + 1 x screw diameter.
- In the case of board building materials, the threadless part of the screw must not be longer than the fixture.
- The edge distance must be at least one plug length.

Installation UX Green

2

Gypsum block	$\rho \geq 0.9 \text{ kg/dm}^3$	[kN]	-	-	0.15	0.35	0.45

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

Expansion plug SX Green

The powerful nylon plug with 4-way expansion

Mirror fixings

Wall consoles

2

Applications

- Lighting
- Wardrobes
- Motion detectors
- Skirting
- Light shelves
- Mirror cabinets
- Letter boxes
- TV consoles
- Trellis
- Folding shutters
- Bath and toilet installations

Certificates

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- Just as effective, secure and durable as regular SX plugs.
- The powerful 4-way expansion provides optimum force transmission in the building material, thus enabling high load values and security.
- The anti-rotation lock prevents the plug

- from spinning in the drill hole.
- The expansion-free plug neck prevents the creation of expansion forces on the material whilst screwing in the screw. This helps to prevent damage to tiles and plaster.
- Fast and easy push-through installation reduces installation time.

Building materials

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete or similar
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone with dense structure
- Aerated concrete
- Solid panel made from gypsum
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The SX GREEN is suitable for pre-positioned and push-through installation.
- When screwing in the screw, the SX GREEN expands in four directions, thus providing a secure anchoring in the building material.
- The required screw length is given by the plug length + fixture thickness + 1 x screw diameter.
- Suitable for wood, chipboard and spacing screws.

Installation SX Green

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

Plasterboard fixing GK Green

The fastest installation in gypsum plasterboard

2

Wall lamps

Pictures

Applications

- Pictures
- Lighting
- Electrical installations
- Fitting accessories
- Series installations

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- Just as effective, secure and durable as regular GK plugs.
- The included setting tool combine the functions of drilling and setting fixings for direct and easy installation.
- Sharp, self-tapping thread for a posi-

tive-fit connection with a high load-bearing capacity.

- The cross-drive recess in the head of the fixing means that the GK Green can also easily be screwed out like a screw.
- The GK Green can be used with various screws, hooks and eye screws, making it very versatile in its applications.

Certificates

Building materials

- Gypsum plasterboard, single and double-planked

Functioning

- The gypsum plasterboard fixing GK Green is suitable for pre-positioned installation.
- The GK Green is screwed flush into the gypsum plasterboard using the setting tool provided. Avoid manual and machine-aided overtightening.
- For board thicknesses greater than 15 mm, drill a hole first by using the setting tool.
- Adapted for wood, sheet metal and chipboard screws with a diameter of 4.0 to 5.0 mm.
- Not suitable for gypsum fibreboard and tiled plasterboard.

Installation GK Green

2

Technical data

Plasterboard fixing GK Green

GK Green

GK Green S

Item	Item No.	Anchor length l [mm]	Min. thickness to first supporting layer t [mm]	Max. fixture thick- ness t_{fix} [mm]	Screw $d_s \times l_s$ [mm]	Drive	Sales unit [pcs]
GK Green	524868 ¹⁾²⁾	22	25	—	4,0 - 5,0 x Ls	—	90
GK Green S	524869 ¹⁾³⁾	22	25	13	4,5 x 35	PZ2	45

1) Including installation tool GKW.

2) Min. screw length = length of plug 22 mm + thickness of building component.

3) Supplied with plasterboard screw.

Loads

Plasterboard fixing GK Green

Recommended loads¹⁾ for a single anchor.

Type		GK
Chipboard screw	[mm]	4.0 - 5.0
Recommended loads in the respective base material F_{rec} ²⁾		
Gypsum plasterboard	9,5 mm	[kN] 0.07
Gypsum plasterboard	12,5 mm	[kN] 0.08
Gypsum plasterboard	2 x 12,5 mm	[kN] 0.11

¹⁾ Required safety factors are considered. The given loads are valid for chipboard screws with the specified diameters.²⁾ Valid for tensile load, shear load and oblique load under any angle.

Hammerfix N Green

The hammer-in plug for simple, fast and economic installation

2

Cable fixing

Timber substructures

Applications

- Substructures made of wood and metal
- Wall connection or plaster profiles
- Slides
- Sheets
- Cable and pipe clips
- Perforated tapes

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- Just as effective, secure and durable as regular hammerfix N plugs.
- The rapid push-through and hammer-set installation reduces the amount of work required and allows for economic series

installation.

- The integrated hammer-in stop prevents the plug from expanding prematurely, thus enabling problem-free installation.
- Together with the cross-slot recess, the thread of the nail screw allows the screw to be removed, thus allowing for subsequent dismantling.

Certificates

Building materials

- Concrete
- Solid sand-lime brick
- Building brick
- Natural stone
- Solid brick made from lightweight concrete
- Aerated concrete
- Solid panel made from gypsum
- Vertically perforated brick
- Perforated sand-lime brick
- Hollow blocks made from lightweight concrete

Functioning

- The hammerfix N Green is suitable for push-through installation.
- The easiest installation: drill, knock in and you're done.
- When being hammered in, the nail screw causes the plug to expand in two directions, thus providing a secure anchoring in the building material.

Installation N Green

Aircrete anchor GB Green

Secure in aerated concrete

Radiators

Suspended ceilings

2

Applications

- Suspended ceilings
- Cable trays
- Pipelines
- Guard rails
- Façade and roof constructions made of wood and metal
- Anopy brackets
- Letter boxes
- Trellis

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- The spiral-shaped outer ribs cut a positive fit in the soft building material, thus

ensuring best pressure distribution and load-bearing capacity.

- Can be applied with a hammer – there is no need for special tools, thus saving time and money for the installation.

Certificates

Building materials

Suitable for:

- Aerated concrete \geq AAC 2
- Aerated concrete and ceiling panels of compressive strength \geq 3.3

Functioning

- The aircrete anchor GB Green is suitable for pre-positioned installation.
- The spiral-shaped outer ribs cut a positive fit into the soft building material when knocked in, thus ensuring optimal pressure distribution and load-bearing capacity.
- The required screw length is given by the plug length + fixture thickness + 1 x screw diameter.
- Rotary drilling of the hole is required.
- Can be used in unplastered aerated concrete.

Installation GB Green

2

Technical data

Aircrete anchor GB Green

GB Green

Item	Item No.	Drill hole diameter	Min. drill hole depth	Plug length = min. anchorage depth	fischer safety screw	Sales unit
		d_0 [mm]	h_1 [mm]	$l = h_{ef}$ [mm]	$d_s \times l_s$ [mm]	[pcs]

GB Green 10	524871	10	65	55	7	18

Loads

Aircrete anchor GB Green

Recommended loads¹⁾ for a single anchor in aerated concrete.
Load values apply when using fischer safety screws²⁾ according to selection table.

Type			GB Green 8	GB Green 10
Diameter fischer safety screw		[mm]	5	7
Minimum spacing ³⁾	s_{min}	[mm]	150 (100) ⁵⁾	100
Minimum edge distance ⁴⁾	c_{min}	[mm]	100 (75) ⁵⁾	100
Minimum member thickness	h_{min}	[mm]	75	120
Nominal embedment depth	h_{nom}	[mm]	50	55
Recommended load (F_{red}) in the respective base material				
AAC 2	$\rho \geq 0,35$ [kg/dm ³]	[kN]	0.18	0.21
AAC 4	$\rho \geq 0,50$ [kg/dm ³]	[kN]	0.40	0.54 (0,71) ⁶⁾

¹⁾ Required safety factors are considered. Valid for tension load, shear load and oblique load under any angle.

²⁾ Galvanised steel (gvz) and stainless steel (R).

³⁾ Minimum possible axial spacing while reducing the permissible load.

⁴⁾ Minimum possible edge distance.

⁵⁾ Values in brackets apply to AAC 2.

⁶⁾ The values in brackets are decisive for member thickness ≥ 150 mm.

Insulation fixing FID Green

Thermal bridge-free installation in insulation materials

2

External lighting

Letterbox

Applications

To fix lightweight attachments on ETICS façades.

The application areas are ETICS façades made of:

- Polystyrene
- Mineral wool
- Soft wood fibre
- Alternative ecological insulation

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- Just as effective, secure and durable as regular FID plugs. To fix lightweight fixtures in plastered and non-plastered

- insulating boards.
- Thermal bridge-free mounting when exclusively set in insulation material.
- Installation without pre-drilling even through thin plaster layers, thus saving a work step.
- Easy to set using a standard bit.

Certificates

Building materials

- Non-plastered, pressure-resistant insulating boards
- Plastered, pressure-resistant insulating boards
- ETICS insulating boards

Functioning

- The FID GREEN can be set in pre-positioned installation with a cordless screwdriver or by hand.
- With its strong drill tip, the insulation fixing FID GREEN breaks through thin plaster layers and cuts a positive fit into the insulation panel with its specially shaped spiral thread.
- From a plaster thickness of 5 mm, we recommend to create a 6 mm hole. This serves for better guidance of the fastener in the setting process.
- Water ingress in the insulation material can be prevented by sealing the plug collar after successful installation.
- Attachment parts can be easily attached with screws.
- We recommend to predrill an 6 mm hole in ETICS rendering.

Injection mortar FIS Green

The first approved injection mortar made with renewable raw materials

2

Building renovation

Bonding in interior construction

Applications

Injection mortar for use with:

- Threaded rods FIS A, see page 129
- Internal threaded anchor RG MI, see page 141
- Rebar anchor FRA, see page 169
- Concrete steel bars, see page 176
- Injection anchor sleeves FIS H, see page 148
- NSF certificate verifies its suitability for applications in drinking water

Advantages

- The worldwide first injection mortar with renewable raw materials. The share of renewable raw materials is certified by DIN CERTCO / TÜV Rheinland.
- Because of the European Technical Assessment it is possible to use the injection system in the area of public buildings.
- The low content of volatile organic compounds (VOC) has a positive effect for the evaluation of fixings in “Green Build-

- ing”-projects.
- Biobased raw materials increase the residential and workplace quality and preserve valuable resources for future generations.
- The injection system is not mandatory for indication and thus reduces risks for installers and the environment.
- FIS Green is suitable for the use with the complete fischer injection accessories.

Certificates

ETA-14/0408, for non-cracked concrete

ETA-14/0471, for masonry

Fire resistance classification R120

Certified to NSF/ANSI 61

Building materials

Approved for anchorings in:

- Concrete C20/25 to C50/60, non-cracked
- Solid brick
- Vertically perforated brick
- Solid sand-lime brick
- Perforated sand-lime brick
- Aerated concrete

Functioning

- FIS Green is a 2-component injection mortar.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the static mixer.
- The injection cartridges are quick and easy to use with the fischer dispensers.
- Partially used cartridges can be reused by changing the static mixer.
- Related accessories for the various applications can be found on pages “non-cracked concrete” and “masonry”.

Installation in concrete with FIS Green and FIS A / RG M

Installation in concrete with FIS Green and RG M I

Installation in solid brick with FIS Green and FIS A / RG M

Installation in hollow blocks with FIS Green and FIS HK + FIS A / RG M

Installation in aerated concrete with FIS Green and FIS A / RG M

Curing times

FIS Green Cartridge temperature (mortar) [°C]	Maximum processing time t_{work} [min.]	Temperature at anchoring base		Minimum curing time ¹⁾	
		[°C]		t_{cure} [hrs.]	[min.]
+5	13	±0 – +5		6	–
+10	9	> +5 – +10		4	–
+20	5	> +10 – +20		–	90
+30	4	> +20 – +30		–	60
+40	2	> +30 – +40		–	30

1) In damp concrete and water-filled holes, the curing time is to be doubled.

Loads

Injection system FIS Green with threaded rod FIS A resp. RG M

Permissible loads of a single anchor^{1) 2)} in normal concrete of strength class C20/25.
For the design the complete current assessment ETA-14/0408 has to be considered.

Type	Material / surface ³⁾	Effective anchorage depth h_{ef} [mm]	Minimum member thickness h_{min} [mm]	Maximum Installation torque $T_{inst, max}$ [Nm]	Non-cracked concrete

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 80 °C). Drill hole cleaning as per specification in the ETA. The factor Ψ_{sus} for sustained load was taken into account with 1.0.

³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Loads

Injection system FIS Green with internal threaded anchor RG M I

Permissible loads of a single anchor^{1) 2)} in normal concrete of strength class C20/25.
For the design the complete current assessment ETA-14/0408 has to be considered.

M16	≥ 4	≥ 0.50	-	≥ 100	130	4	1.07	0.54	240 / 115	80

¹⁾ The required partial safety factors for material resistance as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. Load values are valid for zinc-plated steel, stainless steel R and highly corrosion-resistant steel HCR. In perforated bricks and hollow blocks threaded rod FIS A in combination with anchor sleeve FIS H K.

²⁾ The given loads are valid for installation and use of fixations in dry masonry - use category d/d - for temperatures in the substrate up to 50 °C (resp. short term up to 80 °C) and drill hole cleaning according to assessment. The given brick types in combination with the permissible loads are an extract of the assessment.

³⁾ More information about, e.g. hole patterns, assortment of anchor sleeves FIS H K see assessment.

⁴⁾ In the case of combinations of tensile and shear loads, bending moments and reduced edge and axial spacings (anchor groups), the design must be carried out in accordance with the provisions of the complete assessment.

⁵⁾ Minimum feasible spacing resp. edge distance. Details as well as to the distances to joints see assessment.

⁶⁾ Cylindrical drill hole.

Highbond system FHB II

The best performance in cracked concrete

3

Banisters

Steel girders

Applications

- Guard rails
- Façades
- Staircases
- Steel brackets
- Machines
- Silo installations
- Masts
- Rash protection
- Steelwork constructions
- Timber constructions

Advantages

- The Highbond system FHB II achieves the highest load values in cracked concrete. Thus fewer fixing points and smaller anchor plates are required.
- The injection mortar FIS HB and the capsules FHB II-P/PF offer the same performance and can be used with the FHB II-A S (short version) or L (long version) anchor rods. Thus, you can select the most economical solution based on requirements.
- The large cartridge size of the injection

- mortar FIS HB is ideally suited for serial installation.
- The pre-portioned resin capsule FHB II-P / PF HIGH SPEED is the economical solution for single applications or under water. A cleaning of the borehole during processing with capsule is not required.
- The special formulation used in the capsule FHB II-PF HIGH SPEED ensures especially fast curing and allows installation without waiting times.

Certificates

ETA-05/0164, for cracked concrete

shock-tested; BZS approval for shockproof fixings in civilian shelters.

Fire resistance classification R120

ZTV

Building materials

- Approved for:
- Concrete C20/25 to C50/60, cracked and non-cracked
- Also suitable for:
- Concrete C12/15

Versions

- Zinc-plated steel
- Stainless steel
- Highly corrosion-resistant steel

Functioning

- The FHB II is a bonded anchor with torque-controlled expansion for pre-positioned and push-through installation.
- The anchor rod can be set either with injection mortar FIS HB or with the capsule FHB II-P / FHB II-PF HIGH SPEED, and is fully bonded in the drill hole.
- When tightening the hexagon nut, the anchor rod cones are pulled into the mortar shell, which expands against the drill hole wall.
- The styrene-free vinyl ester mortar fully seals the drill hole.
- When using the resin capsule, set the anchor rod through rotating and hitting motions with a hammer drill. The RA-SDS setting tool, item no. 62420 is used.

For use with

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 80 °C). Drill hole cleaning as per specification in the ETA.

³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Highbond system FHB II Inject

The economical solution in cracked concrete

3

Bridge railings

Steel constructions

Applications

- Bridge railings
- Façades
- Staircases
- Steel constructions
- Masts

Advantages

- The Highbond system FHB II Inject achieves high load values in cracked concrete.
- The combination of injection mortar FIS HB and anchor rod FHB II-AS Inject R (short version) or FHB II-AL Inject R (long version) is ideally suited for serial installa-

tion outdoors.

- The low drill hole depth minimizes the drilling effort, which saves time and ensures economical installation.
- When using hollow drills with extraction, no drill hole cleaning is required.

Certificates

ETA-16/0637, for cracked concrete

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked and non-cracked

Also suitable for:

- Concrete C12/15

Versions

- Stainless steel

Functioning

- The FHB II Inject is a bonded anchor with torque-controlled expansion for pre-positioned and push-through installation.
- For FHB II-AL Inject, the annular gap must be filled with Highbond special mortar FIS HB in case of push-through installation.
- The anchor rod is set with the Highbond special motor FIS HB and is fully bonded in the drill hole.
- When tightening the hexagon nut, the anchor rod cones are pulled in the mortar shell, which expands against the drill hole wall.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 80 °C). Drill hole cleaning as per specification in the ETA.

³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Superbond system FSB

The concrete all-rounder

Bridges for traffic signs

Steel girders

Applications

- Heavy steel constructions
- Silo installations
- Tall shelving
- Sound barriers
- Guard rails
- Staircases
- Reinforcing steel (only FIS SB)
- Overhead installations
- Water-filled drill holes
- Diamond drilled holes

Advantages

- The Superbond system is a combined capsule and injection system for cracked and non-cracked concrete. The injection mortar FIS SB and resin capsule RSB perform the same as each other at the same anchorage depth. This gives the installer maximum flexibility.
- Variable anchorage depths from $4 \times d_s$ to $20 \times d_s$ enable ideal adaptation to the load to be applied, and thus ensure an optimised installation time and use of

materials.

- Maximum application temperatures of up to $+150 \text{ }^\circ\text{C}$ open up new areas of use for bonded anchors.
- Superbond is even approved for installation at frosty temperatures of $-30 \text{ }^\circ\text{C}$.
- The approval-compliant use for seismic applications (performance category C1, C2) as well as in waterfilled and diamond drill holes ensures safety even in extreme conditions.

Certificates

ETA-12/0258, for cracked concrete
 ETA-13/0651, for post-installed rebar connection
 ETA-19/0501, for concrete under fatigue cyclic loading

Fire resistance classification
 R120

Building materials

Approved for anchorings in:

- Concrete C20/25 to C50/60, cracked and non-cracked

Also suitable for:

- Natural stone with dense structure

Functioning

- Superbond is a bonded anchor system based on a vinyl ester hybrid with silane technology.
- The threaded rod FIS A can only be set with injection mortar FIS SB (Standard and HIGH SPEED); the threaded rod RG M with oblique edge can be optionally set with injection mortar FIS SB (Standard and HIGH SPEED) or resin capsule RSB.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the injection cartridge in the static mixer or destruction of the capsule during the setting procedure.
- The mortar bonds the entire surface of the fastening element with the drill hole wall and seals the drill hole.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{\text{ef}}$ and an edge distance $c \geq 1.5 \times h_{\text{ef}}$. Accurate data see ETA.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 80 °C). Drill hole cleaning as per specification in the ETA. The factor Ψ_{sus} for sustained load was taken into account with 1.0.

³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Loads

Superbond-System: Injection mortar FIS SB with threaded rod FIS A or RG M

Permissible loads of a single anchor^{1) 2)} in normal concrete of strength class C20/25.
For the design the complete current assessment ETA-12/0258 has to be considered.

Resin anchor RM II

The bonded anchor for cracked concrete with threaded rod RG M without drill hole cleaning

Crash barriers

Collision protection

3

Applications

- Steel constructions
- Guard rails
- Staircases
- Column bases
- Machines
- Masts

Ideal for:

- Overhead installations
- Water-filled drill holes

Advantages

- RM II is the first bonded anchor with threaded rod RG M for cracked and non-cracked concrete that does not require drill hole cleaning. This allows for a rapid working progress and an economic installation.
- Moreover, there is a reduced exposition

to drill dust on the building site. This increases the safety for the user.

- The pre-portioned resin capsule is easy to install and especially suitable for individual applications and overhead installations.

Certificates

ETA-16/0340, for cracked concrete

Fire resistance classification R120

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked and non-cracked

Also suitable for:

- Natural stone with dense structure

Versions

- Zinc-plated steel
- Stainless steel
- Highly corrosion-resistant steel
- Hot-dip galvanised steel

Functioning

- The resin anchor RM II is suitable for pre-positioned installation when combined with the threaded rod RG M.
- The 2-component resin capsule RM II contains styrene-free vinyl ester resin and hardener.
- The threaded rod RG M is set using a hammer drill and the accompanying setting tool in rotating and hitting motions.
- During setting, the oblique edge of the RG M destroys the capsule, and mixes and activates the mortar.
- The mortar bonds the entire surface of the threaded rod with the drill hole wall and seals the drill hole.

For use with

Anchors & sleeves page

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.
²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 80 °C). Drill hole cleaning as per specification in the ETA. The factor Ψ_{sus} for sustained load was taken into account with 1.0.
³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).
⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Epoxy mortar FIS EM Plus

The powerful injection mortar for rebar connections and cracked concrete

Rail fastenings

Rebar connections

3

Applications

- Post-installed rebar connections
- Jointers for concrete layers
- Rim beam anchorings
- Seismic applications
- Anchorings in diamond-drilled or in waterfilled drill holes
- Heavy steel constructions
- Silo installations
- Tall shelving
- Sound barriers
- Temporary or removable fixings (with internal threaded anchor RG M I)

Advantages

- The ETA assessment guarantees a service life of 100 years. The expert report of IEA Stuttgart even confirms a working life up to 120 years and thus underlines the reliability and durability of the FIS EM Plus.
- The optimised formulation of the epoxy resin mortar FIS EM Plus leads to improved load values in cracked and non-cracked concrete.
- The mortar can be used for rebar connections from diameter 8 to 40, including

seismic applications.

- With the threaded rod FIS A, the loads to be applied can be designed variably by selecting the anchorage depth. The mortar is approved for diamond drilled and water-filled drillholes as well as seismic applications and thus offers safety under extreme conditions.
- For practical use on the building site, FIS EM Plus can be processed at low temperatures down to -5 °C.

Certificates

ETA-17/0979, for cracked concrete
ETA-17/1056, Post-installed rebar connections

Approved for anchorings in:

- Concrete C20/25 to C50/60, cracked and non-cracked

Also suitable for:

- Natural stone with dense structure

Fire resistance classification
R240

Functioning

- The epoxy mortar FIS EM Plus combined with the FIS A threaded rod, is suitable for pre-positioned and push-through installation.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the injection capsule in the static mixer.
- The mortar is injected bubble-free from the drill hole base.
- The mortar bonds the entire surface of the anchor with the drill hole wall and seals off the drill hole.
- The anchor is set manually by lightly rotating it until it reaches the drill hole base.
- During push-through installation, the annular gap between the threaded rod and attachment is filled with FIS EM Plus.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 72 °C). Drill hole cleaning as per specification in the ETA. The factor ψ_{sus} for sustained load was taken into account with 1.0.

³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Epoxy mortar FIS EB

The basic epoxy mortar for applications in concrete

3

Crash barriers and sound insulation walls

Post-installed rebar connections

Applications

- Heavy steel constructions
- Consoles
- Silo installations
- Tall shelving
- Post-installed rebar connections

Advantages

- FIS EB is approved for post-installed rebar connections according to ETA and for use in cracked concrete according to ETA and ICC.
- The injection mortar achieves a reliable performance in many applications which

enables economical use.

- FIS EB can be used under various installation conditions and is approved for seismic applications, making it a safe system.
- Variable anchorage depths allow ideal adaptation to the load to be transmitted.

Certificates

ETA-15/0440, for cracked concrete
ETA-15/0771, for post-installed rebar connection

Fire resistance classification
R240

Building materials

Approved for anchorings in:

- Concrete C20/20 to C50/60, cracked and noncracked

Functioning

- The epoxy mortar FIS EB combined with the threaded rod FIS A is suitable for pre-positioned and push-through installation.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the injection capsule in the static mixer.
- The mortar is injected bubble-free from the drill hole base.
- The mortar bonds the entire surface of the threaded rod with the drill hole wall and seals off the drill hole.
- The threaded rod is set manually by slightly rotating it until it reached the drill hole base.
- During push-through installation, the annular gap between the threaded rod and the attachment is filled with FIS EB.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 80 °C). Drill hole cleaning as per specification in the ETA. The factor Ψ_{sus} for sustained load was taken into account with 1.0.

³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (guz); for damp interiors and for outdoor use, stainless steel (R).

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Epoxy mortar FIS EP

The cost-efficient epoxy mortar for applications in concrete

Column bases

Steel girders

3

Applications

- Columns
- Beams
- Shear dowels
- Starter bars
- Polders

Advantages

- FIS EP is the economical epoxy resin mortar for applications in concrete that do not require approval.
- The epoxy mortar FIS EP can also be used in cracked concrete for construction site convenient installation.
- With the anchor rod FIS A, the loads to be

introduced can be selected variably by choosing the anchorage depth.

- FIS EP can be used for smooth installation with the standard fischer accessories.

Building materials

Suitable for:

- Concrete C20/25 to C50/60, non-cracked and cracked

Functioning

- The epoxy mortar FIS EP combined with the FIS A threaded rod is suitable for pre-positioned and push-through installation.
- Resin and hardener are stored in two separate chambers, thus are not mixed and activated until extrusion through the static mixer.
- The mortar bonds the entire surface of the anchor with the drill hole wall and seals off the drill hole.
- The anchor is set manually by slightly rotating it until the anchor reaches the drill hole base.
- During push-through installation, the annular gap is filled with FIS EP.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance and a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 43 °C (resp. short term up to 55 °C). Drill hole cleaning according to installation instructions. The factor Ψ_{sus} for sustained load was taken into account with 1.0.

³⁾ For dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R). Further steel grades by request.

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance the provisions of the EN 1992-4:2018.

Injection mortar FIS V Plus

The powerful universal mortar for concrete and masonry

3

Steel constructions

Rescue ladders

Applications

Injection mortar for use with:

- Threaded rods FIS A, see page 128
- Internal threaded anchor RG MI, see page 142
- Rebar anchor FRA, see page 170
- Concrete steel bars, see page 177
- Injection anchor sleeves FIS H, see page 149
- Aerated concrete centring sleeve PBZ, see page 194
- Remedial wall tie VBS 8, see page 179
- Weather facing reconstruction system FWS II, see page 181

Advantages

- The FIS V Plus injection mortar has numerous system approvals, such as in cracked and non-cracked concrete, masonry and for special applications.
- The ETA assessment for a service life of 100 years offers permanent safety for all applications.
- The approved use in water-filled drill holes enables a wide range of applications, even under harsh environmental conditions.
- FIS VW Plus High Speed has a significantly shorter curing time than FIS V Plus, thus also ensuring swift work progress even at low temperatures.
- Due to the possible installation temperature of -10° to 40°C the universal mortar can be applied all year long.
- FIS VS Plus Low Speed with extended gelling time prevents premature curing of the mortar at higher temperatures and is ideally suited to large drill hole depths.
- The extensive range of accessories is ideally suited to the FIS V Plus injection mortar family, increases the great flexibility of the system and thus allows for a broad range of applications.

Certificates

ETA-20/0603, for concrete

ETA-20/0728, for post-installed rebar connections

ETA-20/0729, for masonry

Fire resistance classification R120

100 Years

Building materials

Approved for anchorings in:

- Concrete C20/25 to C50/60, cracked and non-cracked
- Hollow blocks made from lightweight concrete
- Hollow blocks made from concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Solid sand-lime brick
- Aerated concrete
- Solid brick

Approved for:

- Rebar connections
- Remedial wall tie VBS 8
- Weather facing reconstruction system FWS II
- Stand-off installation TherMax

Functioning

- The FIS V Plus is a 2-component injection mortar based on vinyl ester hybrid.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the static mixer.
- The injection cartridges are quick and easy to use with the fischer dispensers.
- Partially used cartridges can be reused, simply by changing the static mixer.

1) In wet concrete or water filled holes the curing times must be doubled.

2) Minimal cartridge temperature +5 °C

Loads

Injection system FIS V Plus with internal threaded anchor RG M I

Permissible loads of a single anchor^{1) 2)} in normal concrete of strength class C20/25.

For the design the complete current assessment ETA-20/0603 has to be considered.

Type	Screw Material ³⁾	Effective anchor- age depth h_{ef} [mm]	Minimum member thickness h_{min} [mm]	Maximum installa- tion torque $T_{inst, max}$ [Nm]	Non-cracked concrete			
					Permissible tension (N_{perm}) and shear loads (V_{perm}); minimum spacing (s_{min}) and edge distances (c_{min}) with reduced loads			
					N_{perm} ⁴⁾ [kN]	V_{perm} ⁴⁾ [kN]	s_{min} ⁴⁾ [mm]	c_{min} ⁴⁾ [mm]

	R-70	200	260	120	65.7	39.4	125	125

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 80 °C). Drill hole cleaning as per specification in the ETA. The factor Ψ_{SUS} for sustained load was taken into account with 1.0.

³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Loads

Injection system FIS V Plus with threaded rod FIS A resp. RG M

Permissible loads of a single anchor^{1) 2)} in normal concrete of strength class C20/25.
For the design the complete current assessment ETA-20/0603 has to be considered.

¹⁾ The required partial safety factors for material resistance as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. Load values are valid for zinc-plated steel, stainless steel R and highly corrosion-resistant steel HCR. In perforated bricks and hollow blocks threaded rod FIS A in combination with anchor sleeve FIS H K.

²⁾ The given loads are valid for installation and use of fixations in dry masonry - use category d/d - for temperatures in the substrate up to 50 °C (resp. short term up to 80 °C) and drill hole cleaning according to assessment. The given brick types in combination with the permissible loads are an extract of the assessment.

³⁾ More information about, e.g. hole patterns, assortment of anchor sleeves FIS H K see assessment.

⁴⁾ In the case of combinations of tensile and shear loads, bending moments and reduced edge and axial spacings (anchor groups), the design must be carried out in accordance with the provisions of the complete assessment.

⁵⁾ Minimum feasible spacing resp. edge distance. Details as well as to the distances to joints see assessment.

⁶⁾ Cylindrical drill hole.

Injection mortar FIS V

The versatile injection mortar for anchorings in masonry and cracked concrete

Rescue ladders

Column bases

3

Applications

Injection mortar for use with:

- Threaded rods FIS A, see page 128
- Internal threaded anchor RG MI, see page 142
- Rebar anchor FRA, see page 170
- Concrete steel bars, see page 177
- Injection anchor sleeves FIS H, see page 149
- Aerated concrete centring sleeve PBZ, see page 194
- Remedial wall tie VBS 8, see page 179
- Weather facing reconstruction system FWS II, see page 181
- Anchorings in waterfilled drill holes (only FIS V 410 C)

Advantages

- The FIS V injection mortar has numerous system approvals, such as in cracked and non-cracked concrete, masonry and for special applications. FIS V is thus the universal injection mortar family with guaranteed reliability for practically all areas of application.
- FIS VW HIGH SPEED has a significantly shorter curing time than FIS V, thus also ensuring swift work progress even at low

temperatures.

- FIS VS LOW SPEED with extended gelling time prevents premature curing of the mortar at higher temperatures and is ideally suited to large drill hole depths.
- The extensive range of accessories is ideally suited to the FIS V injection mortar family, increases the great flexibility of the system and thus allows for a broad range of applications.

Certificates

ETA-02/0024, for cracked concrete

See ICC-ES Evaluation Report at www.icc-es.org

ETA-08/0266, Post-installed rebar connections

ETA-10/0383, for masonry

Fire resistance classification R120

Building materials

Approved for anchorings in:

- Concrete C20/25 to C50/60, cracked and non-cracked
- Hollow blocks made from lightweight concrete
- Hollow blocks made from concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Solid sand-lime brick
- Aerated concrete
- Solid brick

Approved for:

- Rebar connections
- Remedial wall tie VBS 8
- Weather facing reconstruction system FWS II
- Stand-off installation TherMax

Functioning

- The FIS V is a 2-component injection mortar based on vinyl ester hybrid.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the static mixer.
- The injection cartridges are quick and easy to use with the fischer dispensers.
- Partially used cartridges can be reused, simply by changing the static mixer.

For use with

¹⁾ The required partial safety factors for material resistance as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. Load values are valid for zinc-plated steel, stainless steel R and highly corrosion-resistant steel HCR. In perforated bricks and hollow blocks threaded rod FIS A in combination with anchor sleeve FIS H K.

²⁾ The given loads are valid for installation and use of fixations in dry masonry - use category d/d - for temperatures in the substrate up to 50 °C (resp. short term up to 80 °C) and drill hole cleaning according to assessment. The given brick types in combination with the permissible loads are an extract of the assessment.

³⁾ More information about, e.g. hole patterns, assortment of anchor sleeves FIS H K see assessment.

⁴⁾ In the case of combinations of tensile and shear loads, bending moments and reduced edge and axial spacings (anchor groups), the design must be carried out in accordance with the provisions of the complete assessment.

⁵⁾ Minimum feasible spacing resp. edge distance. Details as well as to the distances to joints see assessment.

⁶⁾ Cylindrical drill hole.

Loads

Injection system FIS V with threaded rod FIS A

Permissible loads of a single anchor^{1) 2)} in normal concrete of strength class C20/25.
For the design the complete current assessment ETA-02/0024 has to be considered.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 80 °C). Drill hole cleaning as per specification in the ETA. The factor Ψ_{sus} for sustained load was taken into account with 1.0.

³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Loads

Injection mortar FIS VL

The solid injection mortar for standard applications in cracked concrete and masonry

High-bay warehouses

3

Applications

- Cable trays
- Air conditioning units
- Consoles
- Gratings
- Satellite antennas

Advantages

- The FIS VL is approved for use in cracked concrete and masonry, and achieves a high load-bearing capacity in these conditions.
- The injection mortar, based on vinylester resin, allows for anchorings in water-filled drill holes (410 ml cartridges only), thus allowing for rapid progress.
- The temperature resistance of the FIS VL

injection mortar of -40 °C to $+120\text{ °C}$ allows for a solid load level even when subjected to high temperature demands, thus providing great flexibility.

- FIS VL HIGH SPEED has a significantly shorter curing time than FIS VL, thus also ensuring swift work progress even at low temperatures.

Certificates

ETA-10/0352, for cracked concrete

ETA-15/0263, for masonry

Fire resistance classification R120

ETA-15/0539, Post-installed rebar connections

Building materials

Approved for anchorings in:

- Concrete C20/25 to C50/60, cracked
- Hollow blocks made from lightweight concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Solid sand-lime brick
- Solid brick
- Rebar connections
- Aerated concrete

Also suitable for:

- Concrete C12/15
- Hollow blocks made from concrete

Functioning

- The FIS VL is a 2-component injection mortar based on vinylester.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the static mixer.
- The 410 ml coaxial cartridge can be easily used with the fischer FIS AC dispenser.
- Partially used cartridges can be reused, simply by changing the static mixer.
- Related accessories for use in concrete and masonry can be found on page 128.

¹⁾ The required partial safety factors for material resistance as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. Load values are valid for zinc-plated steel, stainless steel R and highly corrosion-resistant steel HCR. In perforated bricks and hollow blocks threaded rod FIS A in combination with anchor sleeve FIS H K.

²⁾ The given loads are valid for installation and use of fixations in dry masonry - use category d/d - for temperatures in the substrate up to 50 °C (resp. short term up to 80 °C) and drill hole cleaning according to assessment. The given brick types in combination with the permissible loads are an extract of the assessment.

³⁾ More information about, e.g. hole patterns, assortment of anchor sleeves FIS H K see assessment.

⁴⁾ In the case of combinations of tensile and shear loads, bending moments and reduced edge and axial spacings (anchor groups), the design must be carried out in accordance with the provisions of the complete assessment.

⁵⁾ Minimum feasible spacing resp. edge distance. Details as well as to the distances to joints see assessment.

⁶⁾ Cylindrical drill hole.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 80 °C). Drill hole cleaning as per specification in the ETA. The factor ψ_{sus} for sustained load was taken into account with 1.0.

³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Loads

Injection system FIS VL with internal threaded anchor RG M I

Permissible loads of a single anchor^{1) 2)} in normal concrete of strength class C20/25.
For the design the complete current assessment ETA-10/0352 has to be considered.

Injection mortar FIS Green

The first approved injection mortar made with renewable raw materials

Building renovation

Bonding in interior construction

3

Applications

Injection mortar for use with:

- Threaded rods FIS A, see page 128
- Internal threaded anchor RG MI, see page 142
- Rebar anchor FRA, see page 170
- Concrete steel bars, see page 177
- Injection anchor sleeves FIS H, see page 149
- NSF certificate verifies its suitability for applications in drinking water

Certificates

ETA-14/0408, for non-cracked concrete

ETA-14/0471, for masonry

Fire resistance classification R120

Certified to NSF/ANSI 61

Advantages

- The worldwide first injection mortar with renewable raw materials. The share of renewable raw materials is certified by DIN CERTCO / TÜV Rheinland.
- Because of the European Technical Assessment it is possible to use the injection system in the area of public buildings.
- The low content of volatile organic compounds (VOC) has a positive effect for the evaluation of fixings in “GREEN Build-

ing”-projects.

- Biobased raw materials increase the residential and workplace quality and preserve valuable resources for future generations.
- The injection system is not mandatory for indication and thus reduces risks for installers and the environment.
- FIS GREEN is suitable for the use with the complete fischer injection accessories.

Building materials

Approved for anchorings in:

- Concrete C20/25 to C50/60, non-cracked
- Solid brick
- Vertically perforated brick
- Solid sand-lime brick
- Perforated sand-lime brick
- Aerated concrete

Functioning

- FIS GREEN is a 2-component injection mortar.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the static mixer.
- The injection cartridges are quick and easy to use with the fischer dispensers.
- Partially used cartridges can be reused by changing the static mixer.
- Related accessories for the various applications can be found on pages “non-cracked concrete” and “masonry”.

¹⁾ The required partial safety factors for material resistance as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. Load values are valid for zinc-plated steel, stainless steel R and highly corrosion-resistant steel HCR. In perforated bricks and hollow blocks threaded rod FIS A in combination with anchor sleeve FIS H K.

²⁾ The given loads are valid for installation and use of fixations in dry masonry - use category d/d - for temperatures in the substrate up to 50 °C (resp. short term up to 80 °C) and drill hole cleaning according to assessment. The given brick types in combination with the permissible loads are an extract of the assessment.

³⁾ More information about, e.g. hole patterns, assortment of anchor sleeves FIS H K see assessment.

⁴⁾ In the case of combinations of tensile and shear loads, bending moments and reduced edge and axial spacings (anchor groups), the design must be carried out in accordance with the provisions of the complete assessment.

⁵⁾ Minimum feasible spacing resp. edge distance. Details as well as to the distances to joints see assessment.

⁶⁾ Cylindrical drill hole.

Loads

Injection system FIS Green with threaded rod FIS A resp. RG M

Permissible loads of a single anchor^{1) 2)} in normal concrete of strength class C20/25.
For the design the complete current assessment ETA-14/0408 has to be considered.

	R-70	400	450	120	64.8	39.4	85	85

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ The specified loads are valid for anchorages in dry and damp concrete. For temperatures in the anchoring substrate up to 50 °C (resp. short term up to 80 °C). Drill hole cleaning as per specification in the ETA. The factor Ψ_{sus} for sustained load was taken into account with 1.0.

³⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

⁴⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Loads

Injection system FIS Green with internal threaded anchor RG M I

Permissible loads of a single anchor^{1) 2)} in normal concrete of strength class C20/25.
For the design the complete current assessment ETA-14/0408 has to be considered.

Type	Screw Material ³⁾	Effective anchorage depth h_{ef} [mm]	Minimum member thickness h_{min} [mm]	Maximum Installation torque $T_{inst, max}$ [Nm]	Non-cracked concrete

Injection mortar FIS P Plus

The approved injection mortar for anchorings in masonry and non-cracked concrete

Cable duct

Air conditioning units

3

Applications

Injection mortar for use in masonry and non-cracked concrete with:

- Threaded rods FIS A, see pages 128
- Injection anchor sleeves FIS H K, see page 149
- Injection push-through anchor sleeve FIS H K, see page 149

Assessment/Approval

ETA-11/0419, for masonry

ETA-18/0383, for non-cracked concrete

Advantages

- With FIS P Plus, anchorings in masonry and non-cracked concrete for which approval is relevant can be realised in a particularly economical manner.
- FIS P Plus 300 T can be used with stable,

standard silicone injection dispensers. No special equipment is required. As a result, procurement costs can be reduced on the basis of polyester resin.

Building materials

- Concrete C20/25 to C50/60, non-cracked
 - Vertically perforated brick
 - Perforated sand-lime brick
 - Solid sand-lime brick
 - Perforated blocks made from lightweight concrete
 - Solid brick
 - Aerated concrete
- Also suitable for:
- Solid brick made from lightweight concrete

Functioning

- FIS P Plus is a 2-component injection mortar based on polyester resin.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the static mixer.
- Partially used cartridges can be reused, simply by changing the static mixer.
- Related accessories for use in masonry and non-cracked concrete can be found on page 128.

Injection mortar FIS P

The reliable injection mortar for anchorings in masonry

Gates

Wall consoles

3

Applications

Injection mortar for use in masonry and aerated concrete with:

- Threaded rods FIS A, see page 128
- Internal threaded anchor FIS E, see page 144
- Injection anchor sleeves FIS H, see page 149
- Aerated concrete centring sleeve PBZ, see page 195

Advantages

- The FIS P is the economical solution for anchorings in masonry that do not require approvals.
- The FIS P 300 T can be used with stable,

standard silicone injection dispensers. No special equipment is required. This helps to reduce procurement costs.

Building materials

- Vertically perforated brick
- Hollow block
- Perforated sand-lime brick
- Solid sand-lime brick
- Aerated concrete
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The FIS P is a 2-component injection mortar based on polyester resin.
- Resin and hardener are stored in two separate chambers and are not mixed and activated until extrusion through the static mixer.
- Partially used cartridges can be reused, simply by changing the static mixer.
- Related accessories for use in masonry and aerated concrete can be found on page 149 or page 194.

Threaded rod FIS A

3

Bridges for traffic signs

Steel constructions

Advantages

- The system of anchor rod FIS A and an injection mortar for cracked concrete (M8 to M30) and non-cracked concrete (M6 to M30) can be individually selected based on requirements, thus allowing for a wide range of applications.
- Variable anchorage depths allow for ideal adaptation to the load to be applied, and ensure an optimised installation time and use of materials.
- Push-through installation is possible without any special parts through filling the annular gap with injection mortar.
- The wide range of approved steel types allows for use in all corrosion resistance classes and offers maximum application safety.

Versions

- Zinc-plated steel
- Stainless steel

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked and non-cracked

Also suitable for:

- Concrete C12/15

Functioning

- The system of threaded rod FIS A and an injection mortar for cracked concrete (M8 to M30) and non-cracked concrete (M6 to M30) can be individually selected based on requirements, thus allowing for a wide range of applications.
- The mortar is extruded bubble free from the drill hole base.
- The mortar bonds the entire surface of the threaded rod with the drill hole wall and seals the drill hole.
- The threaded rod is set manually, by lightly rotating it until it reaches the drill hole base.

Threaded rod RG M

Steel constructions

Underwater applications

3

Advantages

- The wide range of the RG M from M8 to M30 opens up a wide range of applications and therefore offers great flexibility.
- The wide range of approved steel types for RG M allows for use in all corrosion

resistance classes and offers the best possible application safety.

- Please refer to the approvals for the resin capsules and mortar used.

Building materials

Approved for anchorings in:

- Concrete C20/25 to C50/60, cracked and non-cracked

Also suitable for:

- Natural stone with dense structure

Versions

- Zinc-plated steel
- Stainless steel R
- Hot-dip galvanised steel
- Highly corrosion-resistant steel HCR

Functioning

- Due to its oblique edge, the threaded rod RG M is particularly suitable for use in conjunction with resin capsules.
- The threaded rod RG M is set using a hammer drill and the accompanying setting tool in rotating and hitting motions.
- During setting, the oblique edge of the RG M destroys the capsule, and mixes and activates the mortar.
- Use with injection mortar is also possible. Here, the threaded rod is manually inserted into the drill hole with a light rotating movement until it reaches the base of the hole.

Threaded rod RG M

Internal-threaded anchor RG M I

3

Column bases

Pumps

Advantages

- The system internal threaded anchor RG M I and an injection mortar for concrete can be individually selected based on requirements, thus allowing for a wide range of applications.
- The internal threaded anchor RG M I allows for surface flush removal and reuse of the fixing point, and therefore offers the best possible flexibility.
- The metric internal thread allows for the use of standard screws or threaded rods for the ideal adaptation to suit the intended use.

Versions

- Zinc-plated steel
- Stainless steel

Building materials

Approved for:

- Concrete C20/25 to C50/60, non-cracked

Also suitable for:

- Concrete C12/15, non-cracked

Functioning

- The injection system is suitable for pre-positioned installation when combined with the internal threaded anchor RG M I.
- The mortar is extruded bubble free from the drill hole base.
- The mortar bonds the entire surface of the internal threaded anchor with the drill hole wall and seals the drill hole.
- The internal threaded anchor is set manually, by lightly rotating it until it reaches the drill hole base.

Approval Seismic C1/C2 only with maximum embedment depth

Internal threaded sockets FIS E

3

Cable duct

Advantages

- The fixing system threaded rod FIS A and an injection mortar can be individually selected based on requirements, thus allowing for a wide range of applications.
- The wide range of approved threaded rods FIS A from M6 to M16 allows for various applications.
- The internal threaded anchor FIS E allows for surface flush removal and reuse of the fixing point, and therefore offers the best possible flexibility.

Versions

- Zinc-plated steel
- Stainless steel

Building materials

Approved for:

- Solid sand-lime brick
- Solid brick

Also suitable for:

- Solid and lightweight concrete blocks
- Solid pumice and other solid building materials

Functioning

- FIS E is suitable for pre-positioned installation, whilst FIS A is suitable for pre-positioned and push-through installation.
- The mortar bonds the entire surface of the anchor with the drill hole wall and seals the drill hole.
- The anchor is set manually, by lightly rotating it until it reaches the drill hole base.

Accessories for push-through installation

Simple push-through installation in masonry

Car ports

Detail: Wood constructions in push-through installation

3

Applications

- Timber constructions
- Awnings
- Canopies
- Car ports
- Gates

Advantages

- The direct installation through the fixture reduces preliminary work wherever there are several fixing points for each fixture, and guarantees a significantly simpler installation process.
- The design of the push-through anchor sleeve FIS H K allows for a range of usable lengths with just one product, thus providing maximum flexibility and

cost-effectiveness.

- The movable edge, in combination with the scale, makes it easier to adapt the anchor sleeve to suit the desired usable length.
- The grating structure of the push-through anchor sleeve is adapted for the injection mortars FIS V Plus, FIS V, FIS GREEN and FIS P Plus, and ensures sparing mortar use with the best interlock.

Certificates

ETA-10/0383, for masonry

ETA-11/0419, for masonry

ETA-14/0471, for masonry

ETA-20/0729, for masonry

Building materials

Approved for:

- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Hollow blocks made from concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Solid brick

Also suitable for:

- Hollow pumice slabs
- Slabs made of hollow brick and other perforated brick
- Solid pumice and other solid building materials

Versions

- Zinc-plated steel
- Stainless steel

Functioning

- The system can be used with any of the following injection mortars: FIS V Plus, FIS V, FIS GREEN and FIS P Plus can be used but does not have approvals.
- The injection system is suitable for push-through installation when combined with the push-through anchor sleeve FIS H K.
- The push-through anchor sleeve is adapted to suit the fixture thickness using the scale and the movable edge, and cut as required.
- The anchor sleeve is placed in the drill hole, and filled with injection mortar from the anchor sleeve base. It should be ensured that the anchor sleeve is completely filled, including in the fixture region.
- Turning in the anchor causes the mortar to be pushed through the anchor sleeve's grating structure, so that it fits the base material perfectly. The load is borne by the interlock.

Installation with FIS V and FIS HK

Injection anchor sleeves

FIS H K

Advantages

- The grating structure of the FIS H K anchor sleeve is adapted for the injection mortars FIS V Plus, FIS V, FIS VL, FIS GREEN, FIS P Plus and FIS P, and ensures sparing mortar use with the best interlock.
- The centring blades perfectly align the anchor in the anchor sleeve, and allow for use with various threaded rod diameters.
- The barbed hooks secure the anchor sleeve in the drill hole and allow for a trouble-free overhead installation.
- The geometry of the anchor sleeves allows for the bridging of non-bearing layers for a simple and convenient installation.

Functioning

- The system can be used with any of the following injection mortars: FIS V Plus, FIS VW Plus High Speed, FIS VS Plus Low Speed, [... FIS V], FIS VL, FIS GREEN or FIS P Plus. FIS P can be used but does not have approvals.
- The system is suitable for pre-positioned installation when combined with injection anchor sleeves and threaded rods FIS A or internal threaded anchors FIS E.
- The anchor sleeve is placed in the drill hole, and filled with injection mortar from the anchor sleeve base.
- Turning in the anchor causes the mortar to be pushed through the anchor sleeve's grating structure, so that it fits the base material perfectly. The load is borne by the interlock.

FIS H L

Advantages

- The metal anchor sleeve can be cut to the required length and thus allows for a range of usable lengths with just one produce, providing flexibility and cost-effectiveness.
- The grating structure of the anchor sleeve allows for uniform distribution of mortar in the drill hole and thus for secure hold.

Functioning

- The anchor sleeve is at first cut to the required length.
- The anchor sleeve is placed in the drill hole, and filled with injection mortar from the anchor sleeve base.
- Turning in the anchor causes the mortar to be pushed through the anchor sleeve's grating structure, so that it fits the base material perfectly.
- The load is borne by the interlock.

FIS H N

Advantage

- The net structure of the anchor sleeve allows for uniform distribution of mortar in the drill hole and thus for secure hold.

Functioning

- The anchor sleeve is placed in the drill hole, and filled with injection mortar from the anchor sleeve base.
- Turning in the anchor causes the mortar to be pushed through the anchor sleeve's grating structure, so that it fits the base material perfectly.
- The load is borne by the interlock.

Highbond anchor dynamic FHB dyn

The performance class amongst dynamic anchors

Tunnel ventilators

Production robots

3

Applications

- Jib cranes
- Gantry and overhead cranes
- Guide rails for elevators
- Tunnel ventilators (jet fans)
- Gantries in road construction
- Antennas and transmitter masts
- Industrial robots

Advantages

- During the setting process, the injection mortar FIS HB fills the annular gap in the fixture, and ensures optimum load distribution. This allows for the absorption of dynamic alternating loads.
- The cone shape of the FHB-A dyn anchor rod ensures a controlled expansion under dynamic stress, thus allowing for use in cracked concrete.
- The anchor rod FHB-A dyn is also availa-

ble made from highly corrosion-resistant steel. This makes it suitable for use in aggressive atmospheres, for example in tunnels.

- The Highbond anchor dynamic system can achieve even greater shear loads thanks to the additional sleeve of the anchor rod FHB-A dyn V, and therefore provides an increased level of safety.

Certificates

Fire resistance classification
R120

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked and non-cracked

Versions

- Zinc-plated steel
- Highly corrosion-resistant steel

Functioning

- The injection system suitable for tensile zones consists of the Highbond dynamic anchor rod FHB-A dyn and the injection mortar FIS HB.
- FHB dyn is approved for pre-positioned and push-through installation.
- Extruding the mortar causes the two components to be mixed and activated in the static mixer.
- The mortar bonds the entire surface of the anchor rod with the drill hole wall and seals the drill hole.
- The centring sleeve centres the anchor in the fixture, thus ensuring a safe load application.
- The lock nut prevents the nut from becoming loose.

	HCR / 1.4529	100	200	40	11.3	4.4	100	100 ⁵⁾
FHB dyn 12 x 100 V	gvz	105	130	40	14.1	9.6	100	200 ⁵⁾
	gvz	105	200	40	14.1	9.6	100	100
FHB dyn 16 x 125	gvz	125	160	60	23.0	11.9	100	200 ⁵⁾
	gvz	125	250	60	23.0	11.9	100	100
	HCR / 1.4529	125	160	60	15.6	11.9	100	200 ⁵⁾
	HCR / 1.4529	125	250	60	15.6	11.9	100	100 ⁵⁾
FHB dyn 16 x 125 V	gvz	130	160	60	23.0	17.0	100	200 ⁵⁾
	gvz	130	250	60	23.0	17.0	100	100
FHB dyn 20 x 170	gvz	170	220	100	28.4	17.0	80	80
FHB dyn 24 x 220	gvz	220	440	120	28.9	22.2	180	180 ⁵⁾

¹⁾ The design values of the cyclic fatigue loading apply for load cycles $\geq 5 \times 10^6$ in accordance with design method I - for unknown static lower load. If the static lower load is known and / or for lower number of load cycles higher load values are possible. The partial safety factors as regulated in the design standard are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$. The given load values apply for anchorages in dry and wet concrete and temperatures in the base material up to 50 °C (resp. short-term up to 80 °C) and drill hole cleaning acc. to approval.

²⁾ For higher concrete strength classes up to C50/60 higher permissible loads may be possible, see approval. The concrete is assumed to be standard-reinforced.

³⁾ In the case of combinations of tensile loads, shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups) the design must be carried out in accordance with the provisions of the complete approval.

⁴⁾ Valid for pulsating loads. For alternating loads see approval.

⁵⁾ Without reduction of the tension and shear load. For details see approval.

Superbond dynamic FSB dyn

Dynamic fixation for FIS A and RG M with Superbond-System FSB

3

Pumps

Guide rails for elevators

Applications

- Small road sign
- Promotional sign
- Guide rails for elevators
- Pumps
- Conveyor belts
- Gates and doors
- Machines, components exposed to vibration

Advantages

- The system is the first to offer lightweight, dynamic load specifications in an ETA for fischer FIS A 8.8 and RG M threaded rods using the filling set. The ETA covers zinc-plated steel in sizes M12 and M16, and stainless steel R in sizes M12 to M24. FIS A threaded rods must be mounted with FIS SB injection mortar and RG M threaded rods must be mounted with RSB mortar capsules or FIS SB injection

- mortar.
- Variable anchoring depth enables ideal adaption to the load and ensures optimised installation and material use.
- The version with RG M threaded rods and RSB capsules is ideal for accessories kits or applications with diamond drill holes.
- Approved threaded rods in stainless steel R can be used outdoors.

Certificates

ETA-12/0258, for cracked concrete
 ETA-13/0651, for post-installed rebar connection
 ETA-19/0501, for concrete under fatigue cyclic loading

Building materials

- Approved for:
- Concrete C20/25 to C50/60, cracked and non-cracked

Version

- Zinc-plated, steel grade 8.8
- Stainless steel R

Functioning

- Threaded rod FIS A in combination with injection mortar FIS SB is approved for pre-positioned and push-through installation.
- Threaded rod RG M in combination with the resin capsule RSB is approved for pre-positioned and push-through installation.
- The injection system ensures a full-surface bonding between the fixing element and wall of the drill hole and seals the drill hole.
- The filling disc ensures that the annular gap is filled seamlessly in pre-positioned installation, thereby ensuring reliable load transmission.
- The centering sleeve centres the threaded rod in the fixture, thus ensuring a safe load application.
- The lock nut prevents the hexagonal nut from becoming loose.

¹⁾ The design values of the cyclic fatigue loading apply for load cycles $> 10^6$ in accordance with design method I acc. to TR061 - for unknown static lower load. If the static lower load is known and / or for lower number of load cycles higher load values are possible. The partial safety factors as regulated in the design standard are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$. The given load values apply for anchorages in dry and wet concrete and temperatures in the base material up to 50 °C (resp. short-term up to 80 °C) and drill hole cleaning acc. to assessment.

²⁾ For higher concrete strength classes up to C50/60 higher permissible loads may be possible, see assessment. The concrete is assumed to be standard-reinforced.

³⁾ In the case of combinations of tension loads, shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups) the design must be carried out in accordance with the provisions of the complete assessment.

Loads

Superbond dynamic with Superbond capsule RSB and threaded rod RG M

Design values for cyclic fatigue loading¹⁾ of a single anchor normal concrete of strength class C20/25²⁾.
For the design the complete current assessment ETA-19/0501 has to be considered.

¹⁾ The design values of the cyclic fatigue loading apply for load cycles $> 10^8$ in accordance with design method I acc. to TR061 - for unknown static lower load. If the static lower load is known and / or for lower number of load cycles higher load values are possible. The partial safety factors as regulated in the design standard are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$. The given load values apply for anchorages in dry and wet concrete and temperatures in the base material up to 50 °C (resp. short-term up to 80 °C) and drill hole cleaning acc. to assessment.

²⁾ For higher concrete strength classes up to C50/60 higher permissible loads may be possible, see assessment. The concrete is assumed to be standard-reinforced.

³⁾ In the case of combinations of tension loads, shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups) the design must be carried out in accordance with the provisions of the complete assessment.

Dynamic anchor FDA

The dynamic push-through anchor for an economical serial installation at medium load level

Platform lifts

Applications

- hydraulic ramps
- Conveyor belts
- Industrial robots
- cooperation robots and -parts
- Guide rails for elevators

Certificates

ETA-20/0206

Advantages

- Medium load level for a variety of applications.
- Pre-assembled anchor rod for fast installation.
- Assessed safety acc. to ETA for endless numbers of load cycles.
- Easy push-through installation leads to

cost effectiveness – especially for serial installations.

- Tight assortment with the size.
- Less spacings and edge distances.
- Drill holes are sealed.

Building materials

- Concrete C20/25 to C50/60, cracked and non-cracked

Versions

- Zinc-plated steel

Functioning

- The injection system suitable for tensile zones consists of the fischer dynamic anchor rod FDA-A dyn and the injection mortar FIS HB.
- FDA is approved for push-through installation.
- Extruding the mortar causes the two components to be mixed and activated in the static mixer.
- The mortar bonds the entire surface of the anchor rod with the drill hole wall and seals the drill hole.
- The centring sleeve centres the anchor in the fixture, thus ensuring a safe load application.
- During the setting process, the injection mortar FIS HB fills the annular gap in the fixture, and ensures optimum load distribution. This allows for the absorption of dynamic alternating loads.

Installation in concrete with FIS HB and FDA

¹⁾ The design values of the cyclic fatigue loading apply for load cycles $\geq 5 \times 10^6$ in accordance with design method I acc. to TR061 - for unknown static lower load. If the static lower load is known and / or for lower number of load cycles higher load values are possible. The partial safety factors as regulated in the design standard are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$. The given load values apply for anchorages in dry and wet concrete and temperatures in the base material up to 50 °C (resp. short-term up to 80 °C) and drill hole cleaning acc. to assessment.

²⁾ For higher concrete strength classes up to C50/60 higher permissible loads may be possible, see assessment. The concrete is assumed to be standard-reinforced.

³⁾ In the case of combinations of tension loads, shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups) the design must be carried out in accordance with the provisions of the complete assessment.

⁴⁾ Valid for pulsating loads. For alternating loads see assessment.

⁵⁾ Without reduction of the tension and shear load. Details see assessment.

Post-installed rebar connections

Professional rebar connections

3

Post-installed rebar connections

Post-installed rebar connections

Applications

- Post-installed concrete steel bars, e.g. for overlap connections, end anchorings, starter bars, crack stitching etc.
- Rebar anchor FRA
- Concrete-Concrete Shear Connector FCC

Advantages

- The injection mortars FIS V Plus, FIS V and FIS VS LOW SPEED allow for rebar connections from Ø8 to 28 mm, whilst injection mortar FIS EM Plus allows for rebar connections up to Ø40 mm to be carried out. This offers maximum flexibility.
- The injection mortar FIS SB allows the user for realizing rebar connections from Ø 8 to 32 mm in combination with a simple and thus user-friendly cleaning of the drill hole.
- FIS EM Plus also allows for the execution of rebar connections in diamond-drilled holes without additional roughening of

the drillhole.

- The fischer rebar anchor FRA with connecting thread in stainless steel R fully utilises the load-bearing capacity of the concrete. This means that extremely high tensile loads can be introduced into the base material.
- Accessories in line with building site requirements, such as injection adapters and extension tubes, ensure rapid progress.
- The FIS rebar case contains all of the individual components required, thus ensuring a convenient installation.

Certificates

ETA-08/0266, Post-installed rebar connections
ETA-15/0539, Post-installed rebar connections
ETA-20/0728, Post-installed rebar connections
ETA-17/1056, Post-installed rebar connections

Building materials

Approved for:

- Concrete C12/15 to C50/60, cracked and non-cracked

Functioning

- Anchoring as with cast-in reinforcement bars in line with Eurocode 2 and DIN 1045-1.
- The mortar is extruded bubble free into the drill hole using the injection adapter. The geometry causes a build-up of pressure in the drill hole, which pushes the injection adapter and extension tube automatically out of the drill hole.
- The mortar bonds the entire surface of the reinforcement bar with the drill hole wall.
- A special certification is necessary for installation according to approval in Germany. The fischer Academy offers the relevant training courses.

Loads

Rebar anchor FRA with injection systems FIS EM Plus, FIS SB, FIS V Plus und FIS VS Plus LOW SPEED in accordance with rebar theory

Design resistances and permissible loads^{1) 2)} of single, post-installed Rebar anchor in cracked or non-cracked normal concrete of the strength class C20/25³⁾.

Type	Basic value for anchorage length $l_{b,reqd}$ ⁴⁾ [mm]	Maximum anchorage depth $l_{v,max}$ [mm]	Maximum embedment depth $l_{e,ges,max}$ [mm]	Maximum installation torque T_{inst} [Nm]	Maximum design resistance for axial tension load $N_{Rd,s}$ ⁵⁾ [kN]	Maximum permissible tension load $N_{zul,s}$ ⁵⁾ [kN]
FRA 12/900 M12	567	800	900	≤ 50	49.2	35.1
FRA 16/1100 M16	756	1000	1100	≤ 100	87.4	62.4
FRA 20/1400 M20	945	1300	1400	≤ 150	136.6	97.6

For planning and design the complete European Technical Assessments ETA-17/1056 (FIS EM Plus), ETA-13/0651 (FIS SB) or ETA-20/0728 (FIS V Plus resp. FIS VS Plus LOW SPEED) have to be considered. For determination of the installation parameters (minimum concrete cover distances, etc.) as well as required transverse reinforcement see EN 1992-1-1 and general installation rules of the assessments.

- ¹⁾ The partial safety factors for resistance taken from the European standard EN 1992-1-1 as well as a partial safety factor for action of $\gamma_t = 1.4$ are considered.
- ²⁾ With FIS EM Plus, FIS SB or FIS V Plus and FIS V Plus LOW SPEED post-installed Rebar anchors are approved in dry or wet concrete with temperatures up to +50 °C (resp. short term up to +80 °C) and drill hole cleaning in accordance with ETA.
- ³⁾ The ETAs for FIS EM Plus, FIS SB, FIS V Plus and FIS V Plus LOW SPEED permit post-installed rebar connections in concrete C12/15 up to C50/60. The above mentioned basic value for anchorage length changes depending on the relevant concrete strength class.
- ⁴⁾ Basic value of the anchorage length in accordance with EN 1992-1-1, section 8.4.3 for concrete strength class C20/25 and good bond conditions.
- ⁵⁾ For utilisation of the full steel capacity.

General rules of construction

- The Rebar anchor FRA is permitted to transfer tension loads in direction of the axis of the rebar only.
- l_v and l_0 is according to approval.
- According to approval it has to be proved that sufficient transverse reinforcement is available.

¹⁾ If the clear distance of the lapped bars is larger than $4 \times \phi$, EC2 must be applied.

- c Concrete cover of the post-installed rebar anchor
- c_1 Concrete cover of the front side of the existing rebar
- l_e Concrete cover above the welding
- c_{min} Minimum concrete cover acc. to approval
- ϕ Diameter of the post-installed rebar anchor
- l_0 Lap length
- l_v Effective anchorage depth of the rebar anchor
- $l_{e,ges}$ Embedment depth of the rebar anchor
- d_0 Nominal drill diameter

For planning and design the complete European Technical Assessments ETA-17/1056 (FIS EM Plus), ETA-13/0651 (FIS SB) or resp. ETA-20/0728 (FIS V Plus und FIS VS Plus LOW SPEED) have to be considered. For determination of the installation parameters (minimum concrete cover distances, etc.) as well as required transverse reinforcement see EN 1992-1-1 and general installation rules of the assessments.

- ¹⁾ The partial safety factors for resistance taken from the European standard EN 1992-1-1 as well as a partial safety factor for action of $\gamma_L = 1.4$ are considered.
- ²⁾ The ETAs for FIS EM Plus, FIS SB, FIS V Plus and FIS VS Plus LOW SPEED permit post-installed rebar connections in concrete C12/15 up to C50/60. The above mentioned basic value for anchorage length changes depending on the relevant concrete strength class.
- ³⁾ For utilisation of the full steel capacity.
- ⁴⁾ Basic value of the anchorage length in accordance with EN 1992-1-1, section 8.4.3 for concrete strength class C20/25 and good bond conditions.
- ⁵⁾ All reinforcing steels with characteristic yield strength $f_{yk} = 400 - 600 \text{ N/mm}^2$ in accordance with EN 1992-1-1 Annex C, Table C.1 and C.2N. The above-mentioned basic value for the anchorage length as well as maximum steel resistance (see footnote 3) will change accordingly.
- ⁶⁾ With FIS EM Plus, FIS SB, FIS V Plus or FIS VS Plus LOW SPEED post-installed rebars are approved in dry or wet concrete with temperatures up to +50 °C (resp. short term up to +80 °C) and drill hole cleaning in accordance with ETA.
- ⁷⁾ Only FIS EM Plus.
- ⁸⁾ Values in brackets apply for FIS SB.
- ⁹⁾ Only FIS EM Plus or FIS SB.

¹⁾ If the clear distance of the lapped bars is larger than $4 \times \phi$, EC2 must be applied.

Concrete-concrete shear connector FCC

The approved system for building renovation

Upgrade of bridges

Reinforcement of ceilings

3

Applications

- Bridge repairs
- Increasing load capacity of bridges
- Increasing loads of ceilings during conversion, for example
- Reinforcement of foundations, piers, columns and walls
- Renovation of car park ceilings following corrosion damage

Certificates

Advantages

- Due to its geometry and ease of installation, FCC is the rapid and economic alternative compared to the conventional installation method with bent iron.
- Dimensioning of the anchorage is possible thanks to the building approval. Thus, the system offers maximum security.
- Variable anchoring depths allow for ideal adaptation to the load to be applied, and

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked and non-cracked
- Fixing in old concrete B 25 to B 55

Versions

- Zinc-plated concrete steel bar B500B

ensure an optimised installation time and use of materials.

- Depending on site conditions, the FCC can be anchored, in compliance with the approval, with the injection mortars FIS SB or FIS EM Plus.
- In conjunction with FIS EM Plus, FCC is also approved for use in diamond-drilled drill holes.

Functioning

- The system consists of injection mortar (FIS SB or FIS EM Plus) and the concrete-concrete shear connector FCC.
- The mortar is injected bubble-free from the drill hole base.
- The mortar adheres the drill hole wall to the shear connector FCC.
- The shear connector is set manually, by lightly rotating it until it reaches the drill hole base.
- The tensile and shear forces arising in the joints between the old and new concrete are absorbed by the FCC-H and safely redirected.

Installation in concrete with FIS SB or FIS EM Plus and FCC-H

3

Remedial wall tie VBS 8

The professional façade repair for two-leaf cavity walls

Detail: Repairing outer leaves

Applications

- Post-installation needling of two-skin cavity walls

Certificates

Advantages

- The expansion-force-free fixing prevents splitting and cracks. This means that VBS 8 can be used even in old and sensitive masonry.
- The drill bit diameter of just 8 mm means that a minimal amount of mortar is required for each fixing point. Thus VBS 8 is

particularly economical.

- The installation is approved anywhere along the entire bed joint, thus ensuring a high level of installation safety.
- The grey colour of the injection mortar is similar to the colour of the bed joint. This means that the fixing is almost invisible to the eye.

Building materials

- Facing masonry with and without an air layer

Versions

- Stainless steel

Functioning

- The remedial wall tie VBS 8 comprises a perforated plastic sleeve and a profiled stainless steel tie Ø 4 mm.
- VBS 8 is used together with the injection mortar FIS V Plus.
- The anchor is inserted in the bed joint of the outer leaf using push-through installation.

Installation in facing masonry with FIS V Plus and VBS 8

Weather facing reconstruction system FWS II

The economical solution for the repair of triple-skin outer wall panels

Repairing weather shells

Detail: Repairing weather shells

3

Applications

- For post-installation securing of triple-skin outer wall panels
- Strengthening outer wall panels for additional exterior insulation

Certificates

Advantages

- The FWS II achieves a high shear load-bearing capacity due to its large anchor diameter. This reduces the number of reconstruction anchors needed for each plate to a minimum, thus saving costs.
- The drill hole can be drilled in one step using standard diamond drill bits. This

ensures quick progress is made.

- Installation is already approved from a sub-base thickness ≥ 80 mm.
- Approval with a new measuring strategy allows a safer and economically static calculation while making it possible to document loads from temperature changes.

Building materials

- Triple-skin outer wall panels made of concrete $\geq C12/15$

Versions

- Stainless steel

Functioning

- The FWS II weather facing reconstruction anchors can be bedded in mortar into the load-bearing skin and weather shell with the FIS V Plus, FIS VW Plus or FIS VS Plus / FIS V, FIS VW or FIS VS injection mortar.
- The red plastic coating protects the insulation from being penetrated with mortar.
- You can see the correct anchor filling with the weather shell through the inspection openings on the head of the anchor.

Installation in triple skin outer wall panels with FIS V Plus and FWS II-A

Loads

Weather facing reconstruction system FWS II

Permissible shear loads^{1) 2)} for a single anchor in a load-bearing skin made of concrete \geq C12/15.
For the design the complete approval Z-21.8-2029 has to be considered.

Type	Effective anchorage depth in the load-bearing skin	Thickness of load-bearing layer	Thickness of - thermal insulation ³⁾	Thickness of- outer leaf	Permissible bending moment	Cracked and non-cracked concrete	
	$h_{ef} \geq$ [mm]	$h_T \geq$ [mm]	$h_D \leq$ [mm]	$h_w \geq$ [mm]		Permissible shear load ⁴⁾	Mindestrand-abstand ⁵⁾
					M_{zul} [Nm]	V_{zul} [kN]	$c_{min} (c_w, c_T)$ [mm]
FWS II - A 180	70	80	70	40	1310	11.5	150
FWS II - A 205	70	80	95	40	1310	9.5	150
FWS II - A 230	70	80	120	40	1310	8.1	150

¹⁾ Required safety factors are considered. The given loads are valid under the pre-condition that an additional thermal insulation will be applied on the weather facing.

²⁾ The given loads are valid for fixations in dry and humid concrete for temperatures in the substrate up to +50 °C (resp. short term up to 80 °C) and drillhole cleaning according to approval.

³⁾ For bigger insulation thicknesses special lengths are possible.

⁴⁾ The determination of the permissible shear load for special lengths is done according Annex 3 and 4 of the approval.

⁵⁾ For exact arrangement of the bolts as well as for eventually needed additional proofs see approval.

Can system FCS

The epoxy resin for repair work

3

Filling cracks

Reconstructing corners and edges

Applications

- Filling holes and cracks in concrete and similar surfaces
- Reconstructing chipped corners and edges

Advantages

- The FCS based on epoxy resin has a high bond strength and a low shrinkage value. This guarantees a high performance and opens up a wide range of applications.
- The two product variants, FCS Liquid

(low viscosity = liquid) and FCS (high viscosity = paste-like), allow for use both in horizontal situations and on walls and ceilings. Therefore, there is always the right product for every occasion.

Building materials

- Suitable for:
- Concrete

Functioning

- The resin and hardener are stored in two separate containers.
- The hardener is added to the resin and mixed thoroughly until the material is the same colour throughout.
- Note: The quality of the mixing of components and the proper filling of the holes (without air pockets) has an effect on the load-bearing capacity of the system!
- FCS Liquid can be poured into holes or cracks, or applied using a brush.
- FCS can be applied with a palette knife.
- Once mixed, the material can be used until the maximum open time is reached.

Installation FCS

Installation FCS Liquid

3

Technical data

Can system FCS

FCS

FCS liquid

Item	Item No.	Languages on the can	Sales unit [pcs]
FCS - fischer Can System	043676 ¹⁾	EN, ES, PT	12
FCS Liquid - fischer Can System	043917 ¹⁾	EN, ES, PT	12

¹⁾ Dangerous goods - no express shipping possible.

Curing times

FCS Temperature [°C]	Processing time [min.]	Curing time [hrs.]
+5	70	60
+10	60	30
+20	45	24
-30	30	20
+40	15	16

The gelling time starts when the components get in contact. Stir the components thoroughly until the colour of the mortar is evenly. This is essential to achieve the full performance of the mortar.

Fill & Fix injection fixing

Liquid plugs and repair compounds for serious cases

3

Repairing damaged drill holes

Repairing damaged hinges

Applications

- Repairing cracked or over-sized drill holes
- Repairing broken furniture hinges etc.
- Fixing lightweight objects in difficult or damaged building materials (old buildings)
- Fixing lightweight objects in internal and UV-protected external areas

Advantages

- The Fill & Fix injection fixing works whatever the drill hole size and building material. As a result, a number of applications can be completed with just one product.
- Wood screws can be screwed directly into the hardened injection fixing. This allows for a fast and simple installation.
- Due to the special formulation, the screw

can be screwed into the injection fixing and removed. Thus, components can be reattached to the same point.

- Fill & Fix can be sanded and painted, and is suitable for filling drill holes that are no longer needed prior to painting.

Building materials

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete
- Wooden materials
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone with dense structure
- Panel building materials
- Aerated concrete
- Solid panel made from gypsum
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- Fill & Fix is a 2-component, solvent-free injection compound based on polyurethane. It is applied into the drill hole, where it foams lightly and sets quickly.
- The increase in volume during the setting process guarantees a secure hold, even in dilapidated or difficult building materials.
- After approx. 2 minutes, screws, hooks, eye screws etc. with a diameter of up to 6 mm that are normally used in wood can be screwed into and removed from the set material without pre-drilling.
- Use the perforated sleeves (included) for hollow and board building materials.

Installation in solid building materials

Dispenser

FIS DMS (511118)

3

Applications

- Shuttle cartridges with 360 and 390 ml content
- Cartridges with 150 ml content
- Multibond cartridges with 300 ml content
- Standard silicone cartridges

Advantages

- The 3-fold push rod distributes the extrusion forces equal over the cartridge and prevents the cartridge from tearing up.
- The robust glass fiber reinforced plastic housing increases the breaking strength of the dispenser and offers a long service life.
- The ergonomic design of the FIS DMS ensures a good balance and allows fatigue-free working.

FIS AM (58000)

Applications

- Shuttle cartridges with 360 and 390 ml content
- Cartridges with 150 ml content
- Multibond cartridges with 300 ml content
- Standard silicone cartridges

Advantages

- The robust design can withstand the high requirements of the job site and thus offers a long life.
- The infinitely variable feed allows the exact dosing and thus ensures easy handling.

KP M1 (53115)

Applications

- Cartridges with 150 ml content
- Multibond cartridges with 300 ml content
- Standard silicone cartridges

Advantages

- The handy, robust solid metal construction for standard cartridges up to 310 ml bears up against requirements on the construction site and, as such, is also suitable for professional use.
- The continuous in-feed allows for a precise dosage, making it easy to use.
- The slim shape of the device allows for an exact application, even in difficult to reach spots, thus offering a high level of flexibility

Dispenser

KP M2 (53117)

Applications

- Cartridges with 150 ml content
- Multibond cartridges with 300 ml content
- Standard silicone cartridges

Advantages

- The 18:1 transmission ratio enables the fast, low-energy application of even highly viscous materials, thus ensuring stress-free work.
- The robust design with the special, hardened drive block meets the tough requirements of a construction site and thus offers a long lifespan.
- The freely accessible cartridge makes it possible to perfectly align the extrusion nozzle, guaranteeing application-oriented work.

FIS AC (96497)

Applications

- Coaxial cartridges with 380 and 410 ml content

Advantages

- The robust design can withstand the high requirements of the job site and thus offers a long life.
- The infinitely variable feed allows the exact dosing and thus ensures easy handling.

FIS DMS-L (510992)

Applications

- Cartridges with 585 ml content

Advantages

- The patented parallel lever of the FIS DM S-L allows a large and even force transmission and ensures fatigue-free working.
- The dropout protection on the cartridge holder provides a secure hold of the cartridge in the dispenser.

Dispenser

FIS DCD S (543629)

3

Applications

- Shuttle cartridges with 360 and 390 ml content
- Multibond cartridges with 300 ml content

Advantages

- The FIS DCD S has a dosing function which is controlled by a setting wheel. This allows for optimal adaptation to the processing conditions and ensures fast work progress.
- The robust battery dispenser is very light, fits comfortably in the hand and allows fatigue-free working.
- Additional battery pack for FIS DCD S available (#543946)

FIS AP (58027)

Applications

- Shuttle cartridges with 360 and 390 ml content
- Cartridges with 150 ml content
- Multibond cartridges with 300 ml content
- Standard silicone cartridges

Advantages

- The fast venting minimises cartridge after-run, which facilitates clean work at the site.
- The reducing valve in the handle enables the optimum adjustment of the volume flow in line with the processing conditions.
- Due to the ergonomically formed handle, the dispensers fit nicely in your hand and make work less tiring.

FIS DP-S L (511125)

Applications

- Cartridges with 585 ml content

Advantages

- The fast venting minimises cartridge after-run, which facilitates clean work at the site.
- The reducing valve in the handle enables the optimum adjustment of the volume flow in line with the processing conditions.
- Due to the ergonomically formed handle, the dispensers fit nicely in your hand and make work less tiring.

Dispenser

FIS DP-S L (511125)

Applications

- Cartridges with 1500 ml content

Advantages

- The fast venting minimises cartridge after-run, which facilitates clean work at the site.
- The reducing valve in the handle enables the optimum adjustment of the volume flow in line with the processing conditions.
- Due to the ergonomically formed handle, the dispensers fit nicely in your hand.
- In addition the dispenser has a carrying strap around which make work less tiring.

Balcony railings

Steel girders

4

Applications

- Steel constructions
- Guard rails
- Consoles
- Ladders
- Cable trays
- Machines
- Staircases
- Gates
- Façades
- Timber constructions

Advantages

- According to the new assessment (ETA) the tensile load capacities are decisively increased. This requires less anchors.
- The variable anchorage depths for the sizes M8 to M16 allow for the first time a millimeter-accurate adjustment to the loads.
- The design with cap nut offers a visually attractive anchoring and protects against

- injuries due to the round head shape.
- The first bolt anchor M6 with ETA Assessment for Option 1, for secure and approved anchorage.
- The international approvals guarantees maximum safety and the best performance.
- Approved for diamond-drilled holes.

- Zinc-plated steel
- Stainless steel R
- Highly corrosion-resistant steel HCR

Functioning

- The FAZ II is suitable for pre-positioned and push-through installation and is also ideal for stand-off installation thanks to the long thread.
- When applying the torque, the cone bolt is pulled into the expansion sleeve and expand it against the drill hole wall.
- The anchor is set in line with the approval once the preset installation torque is achieved.
- In the case of series installation, we recommend using the FABS anchor bolt setting tool or our setting tool FA-ST.

Push-through installation with hexagon nut

Push-through installation of the cup nut version with setting gauge

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

High performance anchor FH II

Strong, secure and aesthetic anchoring

Steel girders

Banisters

Applications

- Guard rails
- Staircases
- Consoles
- Steel constructions
- Ladders
- Cable trays
- Machines
- Gates
- Façades
- Gratings

Advantages

- The international approvals guarantee maximum safety and the best performance. These approvals even cover use in earthquake zones (seismic C1 and C2).
- The anchor is designed with different head styles for fixing points with aesthetic design.
- The design between the bolt and the

- sleeve ensures high shear load-bearing capacity. Thus, fewer fixing points are required.
- The optimised geometry minimises the energy required for installation and thus allows for fast installation.
- The use of hollow drills is included in the approval.

Certificates

ETA-07/0025, for cracked concrete

from M10

Fire resistance classification R120

ICC ESR-2691

INOX STAINLESS STEEL

M8 - M20

Building materials

- Concrete C20/25, cracked and non-cracked

Versions

- Zinc-plated steel
- Stainless steel R

Functioning

- The FH II is suitable for push-through installation.
- When the torque is applied, the cone is pulled into the expansion sleeve which is forced against the drill hole wall.
- The black plastic ring prevents rotation when tightening the anchor and acts as a crumple zone to take the torque slip-page, so that the fixture of pulled onto the substrate.
- Alternative head designs for flexible design solutions:
Hexagon head (type S), countersunk head (type SK), bolt version with nut and washer (type B) and cap nut (type H).

Installation FH II

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

High performance anchor FH II-I

Strong, secure and aesthetic with internal thread for the removal option of the attachment

Stadium seating

Air conditioning units

Applications

- Steel constructions
- Guard rails
- Consoles
- Ladders
- Cable trays
- Machines
- Staircases
- Pipeline routes
- Ventilation systems
- Sprinkler systems

Advantages

- The international approvals guarantee maximum safety and the best performance.
- The internal threaded anchor allows the removal of the attachment and the fixing point can be reused.
- The design between the bolt and the

sleeve ensures high shear load-bearing capacity. Thus, fewer fixing points are required.

- The optimised geometry intelligently reduces the energy required for assembly.
- The approval regulates the use of hollow drills.

Certificates

ETA-07/0025, for cracked concrete

Fire resistance classification R120

INOX STAINLESS STEEL

M8 - M12

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked and non-cracked

Also suitable for:

- Concrete C12/15
- Natural stone with dense structure

Versions

- Zinc-plated steel
- Stainless steel R

Functioning

- The FH II-I is suitable for pre-positioned installation.
- When a hexagon wrench is used for installation, the internal thread bolt starts to rotate. This pulls the cone into the expansion sleeve and expands it against the drill-hole wall. At the same time, the anchor is tightened through compression of the black plastic ring. A gap U to the concrete surface is created (see image 4).
- The anchor is set according to the approval when the gap U is 3-5 mm. Alternatively, an installation torque of T_{inst} can also be applied.

Installation FH II-I

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

ZYKON undercut anchor FZA

The fixing system with the highest safety in cracked concrete

Steel girders

Installations in tunnels

4

Applications

- Steelwork constructions
- Guard rails
- Consoles
- Step irons (FZA-ST)
- Ladders
- Cable trays
- Machines
- Staircases
- Gates
- Façades

Advantages

- The special ZYKON undercut technology allows for a positive fit connection and ensures maximum safety, even in large cracks.
- The almost expansion-free installation of the anchor allows small edge distances and axial spacing, and thereby enables flexible use.
- The FZUB special drill allows for a fast in-

stallation by creating the undercut without having to change tools.

- The drill hole geometry allows for a very low setting energy, thus reducing the energy required for installation.
- The ideal interaction of threaded bolts and sleeve with FZA-D allows for a high shear load and therefore fewer fixing points.

Certificates

ETA-98/0004, for cracked concrete

INOX STAINLESS STEEL

from M8

from M10

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked and non-cracked

Also suitable for:

- Concrete C12/15
- Natural stone with dense structure

Versions

- Zinc-plated steel
- Stainless steel R

Functioning

- The FZA and FZA-I is suitable for pre-positioned installation, whereas the FZA-D is suitable for push-through installation.
- The undercut drill hole is created using the special FZUB drill.
- Once the anchor has been placed in the drill hole, the expansion sleeve is driven over the cone using the FZE Plus setting tool, and the undercut drill hole is filled with a positive fit.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

We recommend using our anchor design software C-FIX.

Loads

ZYKON undercut anchor FZA-D

Permissible loads of a single anchor¹⁾ in normal concrete of strength class C20/25.
For the design the complete current assessment ETA-98/0004 has to be considered.

Type	Material/ surface ²⁾	Effective anchorage depth h _{ef} [mm]	Minimum member thickness h _{min} [mm]	Instal- lation torque T _{inst} [Nm]	Cracked concrete				Non-cracked concrete			
					Permissible tension (N _{perm}) and shear loads (V _{perm}); minimum spacing (s _{min}) and edge distances (c _{min}) with reduced loads				Permissible tension (N _{perm}) and shear loads (V _{perm}); minimum spacing (s _{min}) and edge distances (c _{min}) with reduced loads			
					N _{perm} ³⁾ [kN]	V _{perm} ³⁾ [kN]	s _{min} ³⁾ [mm]	c _{min} ³⁾ [mm]	N _{perm} ³⁾ [kN]	V _{perm} ³⁾ [kN]	s _{min} ³⁾ [mm]	c _{min} ³⁾ [mm]

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

ZYKON hammerset anchor FZEA II

The internally threaded anchor with low anchoring depth for individual fixings in cracked concrete

Emergency exit signs in tunnels

Air conditioning units

Applications

- Pipelines
- Ventilation systems
- Sprinkler systems
- Cable trays
- Suspended ceilings

Advantages

- Hammerset anchor with Zykon undercut technology for individual fixings in cracked and non-cracked concrete.
- The combination of hammerset and ZYKON undercut anchor allows for individual fixings in cracked concrete.
- The special ZYKON undercut technology reduces the energy required for installation.
- The FZUB special drill allows for a fast in-

stallation by creating the undercut without having to change tools.

- The embossing that is applied when expanding the anchor secures the simple control of the anchoring.
- The almost expansion-free installation of the anchor allows small edge distances and axial spacing, thereby enabling flexible use.

Certificates

ETA-06/0271, for cracked concrete

Fire resistance classification R120

from M10

INOX STAINLESS STEEL

M8 - M20

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked and non-cracked

Also suitable for:

- Concrete C12/15
- Natural stone with dense structure

Versions

- Zinc-plated steel
- Stainless steel R
- Highly corrosion-resistant steel HCR

Functioning

- The FZEA II is suitable for pre-positioned installation.
- The undercut drill hole is created using the special FZUB drill.
- Once the anchor has been placed in the drill hole, the expansion sleeve is expanded by the driving in of the internal expansion pin with the FZED Plus setting tool, and the undercut drill hole is filled with a positive fit.

Installation FZEA II

We recommend using our anchor design software C-FIX.

Concrete screw UltraCut FBS II 8-14

The high-performance concrete screw for absolute installation ease

4

Banisters

Inclined supports

Applications

- Guard rails
- Consoles/base plates
- Metal profiles
- Steel constructions
- Façades
- Protection barriers
- Results/beam anchors
- Shuttering props (only FBS II zinc-plated steel)
- Temporary anchoring, e.g. of building site equipment (only FBS II zinc-plated steel)
- Concrete-concrete connections (e.g. strengthening of bridges, parking garages or renovation of buildings)

Advantages

- With up to 3 embedment depths, the UltraCut FBS II allows for the same screw to be used for different component thicknesses.
- Unique saw-tooth geometry cuts quickly into the concrete - also in multiple use and reinforced concrete.
- The performance categories seismic C1 and C2 ensure that the strictest of safety standards and earthquake specifications can be fulfilled.
- In comparison to the usually available systems (with mortar) for the reinforcement

of existing concrete structures, the ETA-certified FBS II system with the optional setting tool SC-ST saves time and costs.

- The high coating quality of the FBS II CP is proved through the salt spray chamber test over 2,000h.
- For the zinc-plated steel version the checking gauge allows for reuse covered by the approval.
- The specially hardened red tip of the stainless steel R version provides faster and more secure installation.

Certificates

ETA-15/0352, for cracked concrete
ETA-17/0740, for cracked concrete
ETA-20/0321, for strengthening of existing concrete structures by concrete overlay

Fire resistance classification R120

INOX STAINLESS STEEL

Building materials

- Approved for:
- Concrete C20/25 to C50/60, cracked and non-cracked
 - Strengthening of existing concrete structures with top layer concrete
- Also suitable for:
- Concrete C12/15
 - Solid building materials
 - Masonry with dense structure

Versions

- Zinc-plated steel
- Stainless steel R
- Corrosion protection coating (CP)

Functioning

- The UltraCut FBS II is recommended for the push-through installation.
- Drill holes do not need to be cleaned during vertical installation (ceiling and floor). For floor fixings the hole must be drilled 3x drill hole diameter deeper.
- The approved adjustment for the concrete screws allows the screw to be unscrewed twice for a total length of 20 mm, to place maximum 10 mm packing below the base plates or to align the attached part.
- We recommend using the fischer impact wrench FSS 18V with a suitable impact screwdriver socket or an internal torx drive.
- The screw is installed correctly when the screw head sits flush on the fixture (visual setting control).
- For the installation of restructuring of existing concrete structures by concrete overlay, the setting tool SC-ST can be used for a faster installation.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ Maximum allowable torque for installation with any tangential impact screw driver. Further technical data see ETA.

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Loads

Concrete screw UltraCut FBS II US R hexagon head with integral washer and FBS II SK R countersunk head

Permissible loads of a single anchor¹⁾ in normal concrete of strength class C20/25.
For the design the complete current assessment ETA-17/0740 has to be considered.

We recommend using our anchor design software C-FIX.

Loads

Concrete screw UltraCut FBS II

Recommended loads^{1) 3)} for a single anchor or a fixing point^{4) 5) 6)} in solid brick masonry.

Type			FBS II 8	FBS II 10
Anchorage depth	h_{nom}	[mm]	65	85
Recommended loads (F_{rec}) in the respective base material ^{2) 3)}				
Solid clay brick (EN771-1) $\geq 240 \times 113 \times 115$ mm	$f_b \geq 12$	[kN]	1.1 ¹⁰⁾	1.4 ¹⁰⁾
Solid clay brick (EN771-1) $\geq 240 \times 113 \times 115$ mm	$f_b \geq 20$	[kN]	1.6 ⁷⁾¹⁰⁾	1.6 ⁷⁾¹⁰⁾
Solid sand-lime brick (EN771-2) $\geq 240 \times 71 \times 115$ mm	$f_b \geq 12$	[kN]	1.2 ⁷⁾¹⁰⁾	1.2 ⁷⁾¹⁰⁾
Aerated concrete (EN771-4) $\geq 499 \times 249 \times 120$ mm	$f_b \geq 6$	[kN]	0.7	0.9
Minimum spacing (s_{min}) and edge distances (c_{min})				
Minimum spacing within anchor groups of 2 or 4 anchors	s_{min}	[mm]	80	80
Minimum spacing between single anchors or anchor groups	s_{min}	[mm]	80	80
Minimum distance to the horizontal joint	$c_{min,v}$ ⁸⁾	[mm]	20	20
Minimum distance to the vertical joint	$c_{min,h}$ ⁸⁾	[mm]	40	40
Minimum distance to the free edge	$c_{min, free edge}$ ⁸⁾	[mm]	200	200
Tightening torque ⁹⁾ ($T_{tighten}$) in respective base material				
Solid clay brick ¹⁰⁾	$T_{tighten}$	[Nm]	10	10
Solid sandlime brick ¹⁰⁾	$T_{tighten}$	[Nm]	15	15
Aerated concrete	$T_{tighten}$	[Nm]	5	5

¹⁾ An appropriate safety factor is considered.

²⁾ The given loads apply to the given brick measures for masonry with superimposed load. Larger brick formats are at least equivalent in case of the loads. Base material f_b in [N/mm²].

³⁾ The loads only apply to multiple fixings of non-load-bearing systems and are valid for tensile load, shear load and oblique load under any angle.

⁴⁾ To confirm the given technical data, it is recommended to carry out tests on the construction site. In case of not visible joints a 100% testing of the anchors is recommended as the concrete screws only work in the brick but not in mortar joints.

⁵⁾ A fixing point can be a single anchor, 2 anchors or 4 anchors with a minimum spacing s_{min} . Anchor groups of 4 anchors are arranged in rectangular disposition.

⁶⁾ The fixing points have to be arranged in this way that there will be always maximum one fixing point arranged in one brick.

⁷⁾ Brick pull-out is decisive.

⁸⁾ The values $c_{min,v}$ and $c_{min,h}$ are only valid if the mortar joints are filled proper. Otherwise the joints has to be considered as free edges and $c_{min, free edge}$ is decisive. Minimum mortar strenght is M 2.5.

⁹⁾ The screw is screwed in with a cordless screwdriver, an impact screwdriver or by hand. The screwing process must be finished immediately when the screw head is in contact with the assembled object. The specified tightening torque must then be applied with a torque wrench.

¹⁰⁾ The values are valid for unperforated solid bricks.

Loads

Concrete screw UltraCut FBS II for temporary fastening

Permissible loads of a single anchor¹⁾ in normal concrete of strength class C20/25 to C50/60.
For the design the complete current assessment Z-21.8-2049 has to be considered.

¹⁾ Material safety factor as well as a partial safety factor for load actions of $\gamma_L = 1.4$ is considered. The screw may be used in the concrete member before the characteristic compressive strength $f_{ck, cube}$ is reached. In this case, the concrete compressive strength $f_{c, cube}$ must have reached a value of at least 10 N/mm^2 . Only intended for temporary use and one-time screwing into the same drill hole. Conditions for reuse of the screw see, approval.

²⁾ Values for impulse wrenches with tangential impact and automatic stop device.

³⁾ In case of combined action of shear load and installation close to the edge, the edge distance must be $\geq c_{min} \times 1.5$. Detail see approval.

⁴⁾ Values valid for all load directions.

Concrete screw UltraCut FBS II 6

The high-performance concrete screw for absolute installation ease

4

Suspended air-conditioners

Light, suspended pipelines

Applications

- Pipeline routes
- Suspension for individual pipes
- Suspended mounting rails
- Prestressed concrete hollow core ceilings
- Cable trays
- Ventilation ducts
- Perforated tapes
- Air conditioning units

Advantages

- The first concrete screw with diameter 6 with variable embedment depth offers a flexible adaption of the embedment depth to the loads.
- The ETA assessment includes the use in cracked and non-cracked concrete for highest safety requirements.
- The first 6 mm diameter concrete screw with an ETA for the C1 seismic performance category for additional safety

- standards.
- Different head designs offer a maximum of flexibility and a perfect adaptation to the application.
- The UltraCut FBS II 6 is approved for multiple use of non-load bearing systems and thereby ideal for the installation of pipe routes, cable trays and prestressed hollow concrete ceilings.

Certificates

ETA-15/0352, for cracked concrete
ETA-18/0242, for non-structural applications in concrete

Fire resistance classification
R120

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked and non-cracked
- Prestressed hollow concrete ceilings C30/37 to C50/60 for the multiple use of non-load bearing systems

Also suitable for:

- Concrete C12/15
- Solid building materials
- Masonry with dense structure

Versions

- Zinc-plated steel

Functioning

- The UltraCut FBS II is recommended for the push-through / pre-positioned installation.
- Drill holes do not need to be cleaned during vertical installation (ceiling and floor). For floor fixings the hole must be drilled 3x drill hole diameter deeper.
- The approved adjustment for the concrete screws allows the screw to be unscrewed twice for a total length of 20 mm, to place maximum 10 mm packing below the base plates or to align the attached part, and then to tighten the screw again.
- We recommend using a fischer impact wrench FSS 18V with a suitable impact screwdriver socket or an internal torx drive.
- The screw is installed correctly when the screw head sits flush on the fixture (visual setting control).

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ Maximum allowable torque for installation with any tangential impact screw driver. Further technical data see ETA.

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Loads

Concrete screw UltraCut FBS II 6

Permissible loads for a single anchor¹⁾ for multiple use of redundant non-structural applications* in normal concrete C20/25. For the design the complete current assessment ETA - 18/0242 has to be considered.

* In addition to the load table above, the following must be considered for multiple fastening of non-structural redundant systems:

- A multiple fixing (redundant system) according to EN 1992-4 and CEN/TR 17079 is defined by
 - at least 3 fixing points (per attached element) with at least one anchor at each fixing point and a permissible load per fixing point of 1.4 kN
 - or by at least 4 fixing points with at least one anchor each fixing point and a permissible load per fixing point of 2.1 kN
- Additionally, it has to be proven that the stiffness of the attached element shall be large enough to ensure that in case of excessive slip or failure of a fastener the load on this fastener or fixing point can be transferred to neighbouring fixing points without significantly violating the requirements on the attached element in the serviceability and ultimate limit state. For further details see EN 1992-4 section 7.3 and CEN/TR 17079.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of γ_L = 1.4 are considered.

²⁾ Further technical information for installation see ETA.

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimal edge and axial spacings (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018.

Loads

Concrete screw UltraCut FBS II 6

Permissible loads for a single anchor¹⁾ for multiple use of redundant non-structural applications* in pre-stressed hollow-core concrete slabs of concrete strength C30/37. For the design the complete current assessment ETA - 18/0242 has to be considered.

²⁾ Further technical information for installation see ETA.

³⁾ Valid for tensile load, shear load and oblique load under any angle. In the case of combinations of tensile, shear loads and bending moments, the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018.

Concrete screw FBS N

The powerful inch concrete screw for a fast and simple installation

High-bay warehouses

Steel girders

4

Applications

- Guard rails
- Consoles/Base plates
- Metal profiles
- Shelving systems
- Beam anchorage steel

Advantages

- The special thread geometry enables fast cutting into the concrete and allow higher loads.
- The expansion-free anchorage (undercut) ensures low edge and axial clearances.
- The ribs under the head prevent acciden-

tal loosening of the concrete screw and making the system more secure.

- The hexagonal head for a visually aesthetic installation.

Building materials

- Concrete from 2.500psi until 8.000psi, non-cracked

Version

- Zinc-plated steel

Functioning

- The concrete screw FBS-N US is suitable for push-through installation.
- For the installation, we recommend the fischer impact wrench FSS 18V with a compatible socket.
- If the screw head is in contact with the fixture, the correct installation of the screw is ensured (visual setting check).

¹⁾ Safety Factor of 4 is considered.

²⁾ Concrete compressive strength must be at the specified minimum at the time of installation. In the case of combinations of tensile and shear loads, bending moments and reduced edge and axial spacing (anchor groups), the design must be carried out in accordance to the provisions of the valid standard.

³⁾ Minimum drill hole depth h_0 at pre-positioned installation.

Hammerset anchor EA II

The internally threaded anchor with rim for simple hammerset installation

4

Pipelines

Sprinklers

Applications

- Pipelines and ventilation ducts
- Sprinkler systems
- Cable conduits and wires
- Gratings
- Steel constructions
- Machines
- Consoles
- Shuttering props
- Diamond or core drilling devices (EA II M12 D)

Advantages

- The embossed rim prevents the anchor sleeve from slipping, thus ensuring a trouble-free hammerset installation.
- The metric internal thread means that it is possible to use standard screws or threaded rods for the ideal adaptation to suit the intended use.
- The EMS machine setting tool allows for effortless installation, particularly in the case of series installations.
- The embossing that is applied when

- expanding with the EHS Plus setting tool offers a simple control of the anchoring and provides increased safety.
- Fixing point at h_{ef} 25 mm prevents anchor of falling out of the drill hole before being expanded.
- The black fixing point prevents the anchor from falling out of the drill hole during overhead installation.

Certificates

ETA-07/0135, for non-cracked concrete
ETA-07/0142, for non-structural applications in concrete

Fire resistance classification R120

from M10

INOX STAINLESS STEEL

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked, for the multiple fixings of non-load-bearing systems
- Concrete C20/25 to C50/60, non-cracked

Also suitable for:

- Concrete C12/15
- Natural stone with dense structure

Versions

- Zinc-plated steel
- Stainless steel R

Functioning

- The EA II is suitable for pre-positioned installation.
- Position the hammerset anchor in the drill hole and drive in flush to the surface of the anchor base using the hammer.
- The sleeve is then expanded by driving in the internal bolt with the EHS Plus setting tool (alternative: EMS machine setting tool), and expanded against the drill hole wall.
- The setting tools must sit on the rim of the anchor to ensure correct expansion.
- Use the special EA II M12 x 50 D / EA M 12 x 50 N D with thicker sleeve for fixing diamond and core drilling devices.

Installation EA II

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ For technical data on steel grade and variants, see ETA.

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Loads

Hammerset anchor EA II

Permissible loads for a single anchor¹⁾ for multiple use of redundant non-structural applications* in normal concrete C20/25 up to C50/60. For the design the complete current assessment ETA-07/0142 has to be considered.

Type	Material/surface ²⁾	Screw material	Effective anchorage depth h_{ef} [mm]	Minimum member thickness $h_{min}^{3)}$ [mm]	Maximum installation torque $T_{inst,max}$ [Nm]	Cracked and non-cracked concrete		
						Permissible load ($F_{perm}^{4)}$; minimum spacing (s_{min}) and edge distances (c_{min}) with reduced loads	F_{perm} [kN]	s_{min} [mm]
EA II M6 x 25	gvz	4.6	25	80	4	1.0	30	60

EA II M10 x 40	gvz	4.6	40	80	15	3.0	200	150
EA II M12 x 25	gvz	4.6	25	80	35	1.9	100	130
EA II M12 x 50	gvz	4.6	50	100	35	4.3	200	200

* In addition to the load table above, the following must be considered for multiple fastening of non-structural redundant systems:

A multiple fixing (redundant system) according to EN 1992-4 and CEN/TR 17079 is defined by

- at least 3 fixing points (per attached element) with at least one anchor at each fixing point and a permissible load per fixing point of 1.4 kN
- or by at least 4 fixing points with at least one anchor each fixing point and a permissible load per fixing point of 2.1 kN

- Additionally, it has to be proven that the stiffness of the attached element shall be large enough to ensure that in case of excessive slip or failure of a fastener the load on this fastener or fixing point can be transferred to neighbouring fixing points without significantly violating the requirements on the attached element in the serviceability and ultimate limit state.

For further details see EN 1992-4 section 7.3 and CEN/TR 17079.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered.

²⁾ For details of steel grade, variants and further concrete classes, see ETA.

³⁾ Minimum possible member thickness while increasing the spacing and edge distances at the same time. The combination of minimum spacing and edge distances with the minimum member thickness is not possible. Exact data see ETA.

⁴⁾ Valid for tensile load, shear load and oblique load under any angle. In the case of combinations of tensile, shear loads and bending moments, the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018.

Loads

Hammerset anchor EA II

Permissible loads for a single anchor¹⁾ for multiple use of redundant non-structural applications* in pre-stressed hollow core slabs of concrete C30/37 up to C50/60. For the design the complete current assessment ETA-07/0142 has to be considered.

Type	Material/surface ²⁾	Screw material	Effective anchorage depth h_{ef} [mm]	Bottom flange thickness ⁴⁾ d_b [mm]	Maximum installation torque $T_{inst,max}$ [Nm]	Cracked and non-cracked concrete		
						Permissible load ($F_{perm}^{3)}$; minimum spacing (s_{min}) and edge distances (c_{min}) with reduced loads	F_{perm} [kN]	s_{min} [mm]
EA II M6 x 25	gvz	4.6	25	≥ 35	4	1.0	200	150
EA II M8 x 25	gvz	4.6	25	≥ 35	8	1.4	200	150
EA II M10 x 25	gvz	4.6	25	≥ 35	15	1.9	200	150
EA II M12 x 25	gvz	4.6	25	≥ 35	35	1.9	200	150

* In addition to the load table above, the following must be considered for multiple fastening of non-structural redundant systems:

A multiple fixing (redundant system) according to EN 1992-4 and CEN/TR 17079 is defined by

- at least 3 fixing points (per attached element) with at least one anchor at each fixing point and a permissible load per fixing point of 1.4 kN
- or by at least 4 fixing points with at least one anchor each fixing point and a permissible load per fixing point of 2.1 kN

- Additionally, it has to be proven that the stiffness of the attached element shall be large enough to ensure that in case of excessive slip or failure of a fastener the load on this fastener or fixing point can be transferred to neighbouring fixing points without significantly violating the requirements on the attached element in the serviceability and ultimate limit state.

For further details see EN 1992-4 section 7.3 and CEN/TR 17079.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered.

²⁾ For details of steel grade and variants, see ETA.

³⁾ Valid for tensile load, shear load and oblique load under any angle. In the case of combinations of tensile, shear loads and bending moments, the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018.

⁴⁾ The anchor may be used in a flange thickness $d_b = 30$ mm with the same characteristic resistance, but the drill hole must not cut a cavity.

Hammerset anchor EA Plus

The cost-efficient and certified hammerset anchor for simple installation

Cable duct

Light pipeline routes

4

Applications

- Light pipeline routes
- Cable ducts
- Pipeline routes

Advantages

- The ETA-certified hammerset anchor EA Plus offers a high degree of safety in the non-cracked concrete.
- The EA-ST Plus setting tool guarantees a simple and quick installation.
- The hammerset anchor with internal thread enables an easy pre-positioned installation.
- The metric thread of the EA Plus allows

- the usage of all standard screws and therefore offers high flexibility.
- The large range of internal thread diameters of 6 to 12 mm offers a wide range of different applications.
- The EA Plus has an ETA assessment for multiple fixing. This ensures a safe installation of pipe routes or cable trays.

Certificates

ETA 19/0168, for non-cracked concrete

Fire resistance classification R120

ETA 19/0169, for redundant non-structural systems in concrete

Building materials

- Concrete C20/25 to C50/60, non-cracked

Version

- Zinc-plated steel

Funktionsweise

- Position the hammerset anchor in the drill hole and drive in the anchor flush to the surface of the base material by using the hammer.
- The fischer setting tool EA-ST Plus is then used to expand the sleeve against the drill hole wall by driving in the internal pin.
- The setting tool must sit on the edge of the anchor to ensure correct expansion.

Hammerset anchor EA-N

The cost-efficient hammerset anchor for an easy installation

4

Height adjustable pipe installation

Pipelines

Applications

- Pipeline routes
- Cable trays
- Consoles

Advantages

- The hammerset anchor with internal thread is suitable for pre-positioned installation.
- The EA-N fits for all standard screws with

metric/inch – thread.

- The available internal thread diameter from 6 mm to 20 mm provides flexibility in the application.

Building materials

- Concrete C12/15 to C50/60, non-cracked

Versions

- Zinc-plated steel

Functioning

- Put the hammerset anchor in the drill hole and get it flush to the surface by hammering in.
- With the hammerset tool EA-ST the capsule will spread due to hammering in the internal bolt and tensed up against the drill hole wall.
- The hammerset tools must be set up on the edge of the anchor for a correct expansion.

Installation EA-N

Loads

Hammerset anchor EA-N

Recommended loads¹⁾ of a single anchor in normal concrete of strength class C20/25.

Type	Material/ surface ²⁾	Screw material	Effective anchorage depth h_{ef} [mm]	Minimum member thickness h_{min} [mm]	Maximum installation torque $T_{inst,max}$ [Nm]	Non-cracked concrete		
						Recommended tension load (N_{rec}); minimum spacing (s_{min}) and edge distances (c_{min}) with reduced loads	N_{rec} [kN]	$s_{min}^{2)}$ [mm]
EA M6 x 25 N ³⁾	gvz	≥ 4.6	25	100	4	2.0	65	115
EA M8 x 30 N ³⁾	gvz	≥ 4.6	30	100	8	2.5	95	140
EA M10 x 40 N	gvz	≥ 4.6	40	100	15	4.5	150	180
EA M12 x 50 N	gvz	≥ 4.6	50	120	35	6.0	145	200
EA M12 x 50 N D	gvz	≥ 4.6	50	120	35	6.0	145	200
EA M16 x 65 N	gvz	≥ 4.6	65	160	60	11.5	180	240
EA M20 x 80 N	gvz	≥ 4.6	80	200	120	16.0	190	280

¹⁾ Required safety factors are considered.

²⁾ Minimum possible axial spacings resp. edge distance while reducing the recommended load.

³⁾ Only suitable for statically indeterminate systems.

Nail anchor FNA II

The installation-friendly hammer-set anchor for multiple fixings

4

Suspended ceilings

Fire protection boards

Applications

- Fire protection plates
- Fire protection boards
- Ventilation systems
- Wire and nonious hangers
- Mounting rails
- Metal clamps
- Substructures made of wood and metal

Advantages

- The special active principle allows for a simple hammer-set installation and, therefore, a short processing time.
- The extremely short anchor depth prevents reinforcement hits, and creates the conditions for a trouble-free installation.
- The optimised expansion clip ensures hold when placing in the drill hole, and

prevents it falling out during overhead installations.

- The massive shaft cross-section guarantees a high load-bearing capacity, thus offering an extremely high level of safety.
- A range of head shapes allows for the fixing of wide-ranging fixtures, and for the ideal adaptation to suit the intended use.

Certificates

ETA-16/0175, for non-structural applications in concrete

Fire resistance classification R120

RWS

ZTV

INOX STAINLESS STEEL

from M8

Building materials

Approved for:

- Concrete C12/15 to C50/60, cracked, for multiple fixings of non-structural applications

Also suitable for:

- Solid sand-lime brick
- Natural stone with dense structure
- Prestressed hollow-core concrete slabs

Versions

- Zinc-plated steel
- Stainless steel
- Highly corrosion-resistant steel

Functioning

- The FNA II with nail head is suitable for push-through installation. The FNA II M6 is suitable for pre-positioned and push-through installation. The FNA II OE and H are suitable for pre-positioned installation.
- The installed FNA II nail anchor expands automatically under load. The cone is pulled into the expansion clip and expands it against the drill hole wall.
- Available setting tools: FNA S-SBO to slip onto the drill, FNA S-SDS for series installation with a drilling hammer, FNA S-H for the manual installation of mounting rails.

Installation FNA II

Pre-positioned installation FNA II M6

FNA II 6 x 25 OE	gvz	25	80	-	0.7	40	40

* In addition to the load table above, the following must be considered for multiple fastening of non-structural redundant systems:

A multiple fixing (redundant system) according to EN 1992-4 and CEN/TR 17079 is defined by

- at least 3 fixing points (per attached element) with at least one anchor at each fixing point and a permissible load per fixing point of 1.4 kN

- or by at least 4 fixing points with at least one anchor each fixing point and a permissible load per fixing point of 2.1 kN

- Additionally, it has to be proven that the stiffness of the attached element shall be large enough to ensure that in case of excessive slip or failure of a fastener the load on this fastener or fixing point can be transferred to neighbouring fixing points without significantly violating the requirements on the attached element in the serviceability and ultimate limit state.

For further details see EN 1992-4 section 7.3 and CEN/TR 17079.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered.

²⁾ For concrete strength class C12/15 see ETA.

³⁾ Valid for tensile load, shear load and oblique load under any angle. In the case of combinations of tensile, shear loads and bending moments, the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018.

Nail anchor FNA II RB

The easy-to-assemble fixing solution for removable fire protection panel

Fire protection boards

Fire protection boards

4

Applications

- Fixing of fire protection panel in tunnel construction.
- For fixing of one and more layers of fire protection panel of all manufacturers e.g. Aestuver and Promat.

Advantages

- Easy removal of fire protection panel without damage.
- Reusability of removed fire protection panel.
- Secure fixing, particularly when exposed to vibration, wind and pushing/pulling effects.

- Easy-to-assemble solution.
- Low anchoring depth (30 mm).
- Convenient assembly without torque-controlled setting tool.
- Approved system which has proven itself one million times over.
- Large range of anchor lengths possible.

Certificates

ETA-16/0175, for non-structural applications in concrete

Fire resistance classification R120

RWS

ZTV

INOX STAINLESS STEEL

from M8

Building materials

- Concrete C12/15 to C50/60, cracked and non-cracked, for multiple fixings of non-structural applications

Versions

- Stainless steel R
- Highly corrosion-resistant steel HCR

Functioning

- Nail anchor with low anchoring depth.
- The washer increases the pull through forces significantly and provides the damage of the panel during dismantling.
- Mounting: Drill, hammer in, and you're done!
- Easy pinching off of nail head thanks to special 2-stage pliers.
- For a fast assembly process, we recommend the fischer compressed air setting device (item no. 093731).

Nail anchor FNA II RB

Permissible loads for a single anchor¹⁾ for multiple use of redundant non-structural applications* in normal concrete C20/25 up to C50/60²⁾. For the design the complete current assessment ETA-06/0175 has to be considered.

Type	Material/ surface	Effective anchorage depth h_{ef} [mm]	Minimum member thickness h_{min} [mm]	Cracked and non-cracked concrete		
				Permissible load (F_{perm}); minimum spacing (s_{min}) and edge distances (c_{min}) with reduced loads		
				F_{perm} ³⁾ [kN]	s_{min} [mm]	c_{min} [mm]
FNA II 6 x 30 RB	R	30	80	2.4	40	40
	HCR	30	80	2.4	40	40

* In addition to the load table above, the following must be considered for multiple fastening of non-structural redundant systems:

A multiple fixing (redundant system) according to EN 1992-4 and CEN/TR 17079 is defined by

- at least 3 fixing points (per attached element) with at least one anchor at each fixing point and a permissible load per fixing point of 1.4 kN
- or by at least 4 fixing points with at least one anchor each fixing point and a permissible load per fixing point of 2.1 kN

- Additionally, it has to be proven that the stiffness of the attached element shall be large enough to ensure that in case of excessive slip or failure of a fastener the load on this fastener or fixing point can be transferred to neighbouring fixing points without significantly violating the requirements on the attached element in the serviceability and ultimate limit state.

For further details see EN 1992-4 section 7.3 and CEN/TR 17079.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered.

²⁾ For concrete strength class C12/15 see ETA.

³⁾ Valid for tensile load, shear load and oblique load under any angle. In the case of combinations of tensile, shear loads and bending moments, the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018.

Ceiling nail FDN II

The installation-friendly push-through anchor for multiple fixings

Suspended ceilings

Suspended ceilings with Nonius hangers

4

Applications

- Wire and Nonius hangers
- Ventilation systems
- Slats
- Metal profiles
- Perforated tapes
- Sub-structures made of metal

Certificates

ETA-17/0736, for non-structural applications in concrete

Fire resistance classification R120

Advantages

- The simple active principle allows for cost-efficient hammer-set installation.
- The new short version FDN II K with reduced anchorage depth is faster to install and reduces reinforcement hits.
- The flush-sunk expansion nail signifies the complete expansion of the anchor,

Building materials

Approved for:

- Concrete C12/15 to C50/60
- Concrete C20/25 to C50/60, cracked, for the multiple fixings of non-load-bearing systems

Also suitable for:

- Natural stone with dense structure

Versions

- Zinc-plated steel

and thereby ensures minimum movement when under load.

- The Fischer FDN II can be installed without cleaning of the drill hole.
- The head embossing offers a simple control of the anchoring, and thus saves time.

Functioning

- The FDN II is suitable for push-through installation.
- The FDN II ceiling nail is driven into the drill hole with a hammer until it is firmly in position. Do not hit the expansion wedge at this stage.
- Then, drive the expansion wedge in flush to the nail head. This causes the FDN II to expand against the drill hole wall.

Installation FDN II

Ceiling nail FDZ

The cost-efficient push-through anchor for multiple fixings

Suspended ceilings with Nonius hangers

Drywall profiles

4

Applications

- Drywall profiles
- Wire and Nonius hangers
- Ventilation systems
- Slats
- Metal profiles
- Perforated tapes
- Sub-structures made of metal

Certificates

ETA-17/0737, for non-structural applications in concrete

Fire resistance classification R120

Advantages

- The simple active principle allows for fast hammer-set installation.
- The efficient anchor offers the perfect price-performance ratio for an economical installation.
- The flush-sunk expansion nail signifies

the complete expansion of the anchor, and thereby ensures minimum movement when under load.

- The head embossing offers a simple control of the anchoring, and thus saves time.

Building materials

Approved for:

- Concrete C20/25 to C50/60, cracked, for the multiple fixings of non-load-bearing systems

Also suitable for:

- Concrete C12/15
- Natural stone with dense structure

Versions

- Zinc-plated steel

Functioning

- The FDZ is suitable for push-through installation.
- The FDZ ceiling nail is driven into the drill hole with a hammer until it is firmly in position. Do not hit the expansion wedge at this stage.
- Then, drive the expansion wedge in flush to the nail head. This causes the FDZ to expand against the drill hole wall.

Bolt anchor FBN II

The cost-efficient fixing for flexible use in non-cracked concrete

Column bases

Stormwater overflow tank manholes

4

Applications

- Steel constructions
- Guard rails
- Consoles
- Ladders
- Cable trays
- Machines
- Staircases
- Gates
- Façades

Advantages

- The standard anchorage depth achieves the maximum load-bearing capacities.
- The reduced anchorage depth reduces the drill hole depth. This minimises the amount of time needed for installation whilst increasing flexibility.
- Additional short version "K" with short anchoring depth.
- The long thread balances component tolerances and allows for stand-off installations, thus increasing flexibility.
- Few hammer blows and the minimal torque slippage allow for a noticeably

- simpler installation.
- The drive-in pin protects the thread from damage, and thus ensures a faster installation and dismantling of the attachment.
- The larger washer included with the FBN II GS creates a larger supporting surface and, as such, allows for the fixing of wood constructions.
- When using hollow drills with suction is no drill hole cleaning required.
- New ETA assessment for hot-dip galvanised version for variable working life in outdoor areas.

Certificates

ETA-07/0211, for non-cracked concrete
ETA-18/0101, for non-cracked concrete and variable working life for outdoor areas

INOX STAINLESS STEEL

Building materials

Approved for:

- Concrete C20/25 to C50/60, non-cracked

Also suitable for:

- Concrete C12/15
- Natural stone with dense structure

Versions

- Zinc-plated steel
- Stainless steel R
- Hot-dip galvanised steel (with variable working life for outdoor areas)

Functioning

- The FBN II is suitable for pre-positioned and push-through installation; also suitable for stand-off installation under certain conditions.
- Prior to installation, place the hexagon nut in the optimal position (the drive-in pin projects by approx. 3 mm out of the hexagon nut).
- When applying the torque, the cone bolt is pulled into the expansion clip and expands it against the drill hole wall.
- The head embossing offers a simple control of the anchoring.
- In the case of series installation, we recommend using the FABS bolt anchor setting tool.

Installation FBN II

4

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ Further steel grades, versions and technical data see ETA, e.g. for dry internal conditions, galvanised steel (gvz); for damp interiors and for outdoor use, stainless steel (R).

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Bolt anchor FXA

Cost efficient fixing with ETA assessment for non-cracked concrete

Banisters

Steel girders

4

Applications

- Steel constructions
- Guard rails
- Consoles
- Ladders
- Cable trays
- Machines
- Staircases
- Gates
- Façades

Certificates

ETA-13/0772, for non-cracked concrete

INOX STAINLESS STEEL

Advantages

- The standard anchorage depth achieves the maximum loadbearing capacities so fewer fixing points and smaller anchor plates are required.
- With only a few hammer blows and

minimal torque slippage installation is a simple process.

- The drive-in pin protects the thread from damage, and ensures a faster installation and dismantling of the attachment.

Building materials

Approved for:

- Concrete C20/25 to C50/60, non-cracked

Versions

- Zinc-plated steel

Functioning

- The FXA is suitable for pre-positioned and push through installation, also suitable for stand off installation under certain conditions.
- Prior to installation, place the hexagon nut in the optimal position (the drive-in pin projects by approx. 3 mm out of the hexagon nut).
- When applying the torque, the cone bolt is pulled into the expansion clip and expands it against the drill hole wall.
- The head embossing offers a simple control of the anchoring.

Installation FXA

Bolt anchor FWA

The cost-effective fixation without approval - for use in non-cracked concrete

Stormwater overflow tank manholes

Column bases

4

Applications

- Steelwork constructions
- Guard rails
- Consoles
- Ladders
- Cable trays
- Machines
- Staircases
- Gates
- Façades

Advantages

- Fewer fixing points and smaller anchor plates due to the high load capacity of standard anchorage depth.
- High flexibility and time savings thanks

- reduced anchorage depth.
- Time saving due to push-through installation and reduced drill hole depth.
- Extensive assortment offers the use of imperial and metric dimensions.

Building materials

- Concrete C20/25, non-cracked

Versions

- Zinc-plated steel
- Hot-dip galvanised steel

Functioning

- The FWA is offered in zinc-plated steel for indoor use and sherardized steel for temporary outdoor use.
- The bolt anchor can be used with two anchorage depths.
- During the installation, the cone is pulled into the expansion sleeve. Thereby the sleeve expands against the drill hole wall.

Installation FWA

¹⁾ The partial safety factors for material resistance as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$.

²⁾ For push-through installation.

³⁾ As recommended loads are given in the table, combinations of tensile and shear loads, bending moments and reduced edge and axial spacings (anchor groups) can not be carried out.

Heavy-duty anchor TA M

The installation-friendly internally threaded anchor for fixings in non-cracked concrete

Fall protection devices

Plant construction

4

Applications

- Steel constructions
- Handrails
- Consoles
- Ladders
- Cable trays
- Machines
- Staircases
- Gates
- Façades
- Stand-off installations

Certificates

ETA-04/0003, for non-cracked concrete

Advantages

- The optimised geometry minimises setting energy and allows for use in extremely narrow spaces. This allows for user-friendly installation.
- The three-part expansion sleeve creates even load distribution, thus allowing small edge and axial spacing. Thus the TA M is

extremely flexible.

- The metric internal thread allows to use standard screws or threaded rods for the ideal adaptation to suit the intended use.
- The red plastic cap protects against soiling and thus ensures free-running of the thread.

Building materials

Approved for:

- Concrete C20/25 to C50/60, non-cracked

Also suitable for:

- Concrete C12/15
- Natural stone with dense structure

Versions

- Zinc-plated steel

Functioning

- The TAM is suitable for pre-positioned installation.
- When applying the torque, the cone is pulled into the expansion sleeve and expands it against the drill hole wall.
- For correct installation, it must be ensured that the pre-positioned anchor TA M can be supported on the attachment, or that the threaded rod is countered.
- Determining the screw length l_s :
Screw length l_s =
Length of fixing
+ Thickness of fixture t_{fix}
+ Thickness of washer.

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ For technical data on steel grade and variants, see ETA.

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Heavy-duty anchor TA M-T

The installation-friendly push-through anchor for fixings in non-cracked concrete

Collision protection

Benches

4

Applications

- Steel constructions
- Handrails
- Consoles
- Ladders
- Cable trays
- Machines
- Staircases
- Gates
- Façades

Certificates

ETA-04/0003, for non-cracked concrete

Advantages

- The optimised geometry minimises setting energy and allows for use in extremely narrow spaces. This allows for user-friendly installation.
- The three-part expansion sleeve creates even load distribution, thus allowing small edge and axial spacing. Thus the TA M-T

is extremely flexible.

- The TA M-BP version with twist-off head hinders the dismantling of the fixture for use as a theft-deterrent and break-in protection.
- The detachable screw connection allows for surface flush removal.

Building materials

Approved for:

- Concrete C20/25 to C50/60, non-cracked

Also suitable for:

- Concrete C12/15
- Natural stone with dense structure

Versions

- Zinc-plated steel

Functioning

- The TA M-T is suitable for push-through installation.
- When applying the torque, the cone is pulled into the expansion sleeve and expands it against the drill hole wall.
- The hexagonal head of the TA M-BP is tightened until it breaks off.

Installation TA M-T

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance as regulated in the ETA as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see ETA.

²⁾ For technical data on steel grade and variants, see ETA.

³⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete ETA and the provisions of the EN 1992-4:2018. We recommend using our anchor design software C-FIX.

Sleeve anchor FSA

The push-through anchor for structural fixings in non-cracked concrete

4

Bicycle racks

Waste bins

Applications

- Handrails
- Consoles
- Ladders
- Cable trays
- Gates
- Façades
- Temporary or structural fixings

Advantages

- The optimised geometry minimises setting energy and enables the use in extremely narrow spaces. This allows for user-friendly installation.
- The anchor design makes it possible to

- use different head shapes for flexible design solutions: Hexagon head (type S), bolt version with nut and washer (type B).
- The detachable screw connection allows for surface flush removal.

Building materials

- Suitable for:
- Concrete C12/15 to C20/25, non-cracked
 - Natural stone with dense structure

Versions

- Zinc-plated steel

Functioning

- The FSA is suitable for push-through installation.
- When applying the torque, the cone is pulled into the expansion sleeve and expands it against the drill hole wall.
- The half-moon shaped recesses act as a crumple zone to take the torque slip-page, so that the attachment is pulled onto the anchor base.

Installation FSA

FSA 12	gvz	50	100	40	150	75	5.0	9.9	100	75 ⁴⁾

¹⁾ Required safety factors are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$.

²⁾ In the case of combinations of tension and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance the provisions of the EN 1992-4:2018.

³⁾ Minimum possible axial spacings resp. edge distance while reducing the recommended load.

⁴⁾ No reduction of the recommended tensile load.

Fixing set for diamond drills FDBB

The reusable fixing system for diamond drills and saws

Applications

- Diamond and core drilling devices
- Diamond saws

Diamond drills

Detail: Diamond drills

Advantages

- The detachable screw connection between the expansion element and spindle enables simple dismantling and ensures that the spindle bolt can be reused.
- The robust, reusable spindle bolt guarantees a long life span.
- The active principle of the anchor bolt

enables an active controlled expansion, thus offering a high level of safety.

- The large steel cross-section provides high shear load-bearing capability and, as such, high security for the jerky stoppage of the drill bit.

Building materials

Suitable for:

- Concrete C12/15 to C50/60, non-cracked
- Natural stone with dense structure

Versions

- Zinc-plated steel

Functioning

- The FDBB is suitable for pre-positioned and push-through installation.
- An expansion element must be added to the spindle bolt before installation.
- Use a hammer to drive the FDBB through the base plate of the drilling device into the drill hole.
- When the nut is tightened, the cone bolt is pulled into the expansion clip and expands it against the drill hole wall.
- The expansion element remains in the drill hole when dismantling the spindle bolt. The spindle bolt is once again completed with an expansion element and can be reused.

Installation FDBB

Deinstallation

Wall screw MR

The fixing with simple hammer-set installation in non-cracked concrete

Radiators

4

Applications

- Non-approval-relevant fixings only
- Handrails
- Gratings
- Garden gates

Advantages

- The special construction of the anchor sleeve enables it to be set into the drill hole with a low number of hammer blows. This enables easy installation.
- The flush-sunk expansion pin signifies the complete expansion of the anchor,

and thereby ensures minimum movement when under load.

- The special geometry of the expansion pin reduces the setting energy, thereby enabling a fast and energy-saving installation.

Building materials

Suitable for:

- Concrete C12/15 to C50/60, non-cracked
- Natural stone with dense structure

Versions

- Zinc-plated steel

Functioning

- The MR is suitable for pre-positioned and push-through installation.
- The anchor sleeve is driven into the drill hole with a hammer, without the need for an expansion pin.
- Then the expansion pin is driven in with a hammer, and the wall screw expands against the drill hole wall.

Installation MR

Hollow-ceiling anchor FHY

The installation-friendly internally threaded anchor for fixings in pre-stressed hollow-core concrete slabs

Air conditioning units in pre-stressed hollow-core concrete slabs

Cable trays in pre-stressed hollow-core concrete

4

Applications

- Pipelines
- Cable trays
- Ventilation systems
- Sprinkler systems
- Suspended ceilings
- Consoles
- Steel constructions
- Timber constructions

Certificates

Fire resistance classification
R120

INOX STAINLESS STEEL

from M8

Advantages

- The active principle of the anchor means that the FHY can be used in cavities or in solid materials up to 5 cm from the tensioning wire. This ensures the highest flexibility and user-friendly installation.
- The embossed edge prevents the anchor sleeve from slipping in the cavity, thus allowing for trouble-free installation.
- The optimised geometry minimises

- setting energy and allows for use in extremely narrow spaces. This allows for user-friendly installation.
- The metric internal thread means that it is possible to use standard screws or threaded rods for the ideal adaptation to suit the intended use.
- External report for the usage of the FHY in seismic conditions.

Building materials

Approved for:

- Pre-stressed hollow-core concrete slabs $\geq C45/55$

Versions

- Zinc-plated steel
- Stainless steel R

Functioning

- The FHY is suitable for pre-positioned installation.
- Position the FHY hollow-ceiling anchor in the drill hole and drive in flush to the surface of the anchor base using the hammer.
- The FHY pre-positioned anchor must be able to be supported on the attachment for expansion.
- When applying the torque, the cone is pulled into the expansion sleeve and expands it into the cavity or expands it in the solid material against the drill hole wall.
- Screw length $l_s =$
 Minimum screw-in depth e_2
 + Thickness of fixture t_{fix}
 + Thickness of washer
 (with threaded rod: + height of nut)

Aircrete anchor FPX-I

The strong internally threaded anchor with unique 4-way expansion for fixings in aerated concrete

4

Air conditioning units

Rail fixing

Applications

- Suspended ceilings
- Cable trays
- Pipelines
- Ventilation ducts
- Guard rails/hand rails
- TV consoles
- Kitchen cupboards
- Stand-off installations

Advantages

- The FPX-I enables easy tightening via the hexagon wrench using a cordless screwdriver or ratchet and therefore offers top installation comfort.
- The deformation-controlled expansion of the anchor with the hexagon wrench ensures safe, even and gentle installation.
- The unique 4-way expansion of the FPX-I with a square expansion sleeve prevents the rotation of the anchor in the drill hole

- and ensures high tension and shear loads, which means fewer fixing points.
- The releasing of the hexagonal wrench guarantees an automatic setting control for each installation process.
- The first steel anchor with an ETA-Approval and fire protection certificate for fixings in aerated concrete enables use for safety-relevant fixings, too.

Certificates

ETA-12/0456, for autoclaved aerated concrete

Fire resistance classification R120

M8 - M12

Building materials

Approved for:

- Aerated concrete with compressive strength 2 to 7 N/mm²
- Aerated concrete wall or ceiling boards with compressive strength 3.3 to 4.4 N/mm²
- Planked aerated concrete masonry, e.g. plastered, tiled, papered etc.

Functioning

- The FPX-I with internal thread is suitable for pre-positioned installation.
- Pre-drilling enables easy hammering in, even in high-strength aerated concrete. There is no need to clean the drill hole.
- When the anchor is tightened with the hexagon wrench, the internal thread sleeve starts to rotate and the cone is pulled into the square expansion sleeve. The aerated concrete is compressed on the four sides and generates an undercut in the drill hole.
- When reached the optimum expansion, the hexagon wrench is released automatically from the anchor.

Versions

- Zinc-plated steel

Actions		shear and oblique tension only axial tension
Minimum spacing between anchor group and 2 single anchors	s_{min} [mm]	100 100
Minimum edge distance	c_1 [mm]	250 125 / 150 ³⁾
Minimum spacing	a [mm]	750 600
Minimum edge distance orthogonal to c_1	c_2 [mm]	375 190

¹⁾ Permissible loads of a single anchor for all load directions. The required partial safety factors for material resistance as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered.

²⁾ Grade of the screw resp. threaded rod ≥ 4.8 .

³⁾ In case of reinforced plates with a width ≤ 700 mm.

⁴⁾ $F_{perm,group} = 2 \times F_{perm,single\ anchor}$ valid in case of anchor groups with 2 or 4 anchors. Accurate data see ETA.

Loads

Aircrete anchor FPX-I

Permissible loads¹⁾ and required component dimensions in aerated concrete masonry.
For the design the complete current assessment ETA-12/0456 has to be considered.

Type		FPX-I M6 , M8 , M10 , M12	
Effective anchorage depth	h_{ef}	[mm]	70
Permissible load²⁾ (F_{perm}) per anchor			
$f_{AAC} \geq 1,6 \text{ N/mm}^2 / \rho_m \geq 0,25 \text{ kg/dm}^3$	F_{perm}	[kN]	0.32
$f_{AAC} \geq 2,0 \text{ N/mm}^2 / \rho_m \geq 0,35 \text{ kg/dm}^3$	F_{perm}	[kN]	0.43
$f_{AAC} \geq 4,0 \text{ N/mm}^2 / \rho_m \geq 0,50 \text{ kg/dm}^3$	F_{perm}	[kN]	0.89
$f_{AAC} \geq 6,0 \text{ N/mm}^2 / \rho_m \geq 0,65 \text{ kg/dm}^3$	F_{perm}	[kN]	1.43
Component dimensions			
Minimum member thickness with drill hole cleaning	h_{min}	[mm]	100
Minimum member thickness without drill hole cleaning	h_{min}	[mm]	120
Single anchor			
Minimum spacing	a	[mm]	375
Minimum edge distance	c_1	[mm]	125
Minimum distance to joints	c_f ³⁾	[mm]	75 ⁴⁾ / 125
Minimum edge distance orthogonal to c_1	c_2	[mm]	190
Anchor groups⁵⁾ with 2 or 4 anchors			
Actions		shear and oblique tension	only axial tension
Minimum spacing between anchor group and 2 single anchors	s_{min}	[mm]	100
Minimum edge distance	c_1	[mm]	250
Minimum spacing	a	[mm]	750
Minimum edge distance orthogonal to c_1	c_2	[mm]	190

¹⁾ Permissible loads of a single anchor for all load directions. The required partial safety factors for material resistance as well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered.

²⁾ Grade of the screw resp. threaded rod ≥ 4.8 .

³⁾ In case of non visible joints F_{perm} has to be divided in halve. Accurate data see ETA.

⁴⁾ c_f for tensile load and/or shear load parallel to the joint which is not filled with mortar with width $\leq 2 \text{ mm}$.

⁵⁾ $F_{perm,group} = 2 \times F_{perm,single\ anchor}$ valid in case of anchor groups with 2 or 4 anchors. Accurate data see ETA.

Frame fixing SXRL

The versatile with multiple anchorage depth

Timber substructures

Wall consoles

5

Applications

- Façade, ceiling and roof substructures made of wood and metal
- Façade substructures under compression load (e.g. distance installation without a wall bracket)
- Windows
- Gates and doors
- Wardrobes
- Kitchen hanging cabinets
- Squared timbers
- Beams
- TV consoles
- Wall covering
- Metal brackets
- Metal supports
- Cable ducts
- Cable trays

Advantages

- The long expansion element with multiple anchorage depths of 50, 70 or 90 mm for SXRL 8 and SXRL 10 and 70 or 90 mm for SXRL 14 makes the SXRL a versatile applicable product.
- Through the special geometry of the plug, the loads are evenly distributed in the drill hole.
- When the plug is to be set below the plaster, the longer ribs prevent plug rotation during installation.
- The approval for single-point fixing in cracked concrete makes the SXRL the

- designated specialist in concrete particularly for tasks such as the installation of awning roofs and outdoor railings compared to steel anchors.
- SXRL 14 is approved for the application under compression load and is thus for example useable for façade substructures that are mounted at a distance without wall brackets.
- Complete range available with diameters of 8, 10 and 14 mm and usable lengths up to 290 mm.

Certificates

ETA-07/0121, multiple use for non-structural applications

Fire resistance classification R90

INOX STAINLESS STEEL

Building materials

Approved for:

- Vertically perforated brick
- Aerated concrete
- Hollow blocks made from lightweight concrete
- Perforated sand-lime brick
- Thermal insulation blocks
- Solid block made from lightweight and normal weight concrete
- Solid brick
- Solid sand-lime brick
- Concrete \geq C12/15

Also suitable for:

- Natural stone with dense structure
- Solid panel made from gypsum

Versions

- Zinc-plated steel
- Stainless steel

Functioning

- In hollow building materials, the two expansion zones ensure that the introduction of force is gentle on the substrate. The porous block fillets are not crushed by the second expansion zone and therefore serve to transmit the force
- In aerated concrete and solid building material, the two expansion zones combine to form one long expansion element, thus providing for a uniform and flat distribution of the load into substrate.
- SXRL-T with countersunk head screw is recommended for the installation of timber constructions; in the case of metal constructions, use SXRL-FUS with a wide sleeve rim and a moulded washer on the screw, which also features an integrated hexagon socket.

Loads

Frame fixing SXRL 10

Permissible loads of a single anchor¹⁾ in normal concrete of strength class C20/25.
For the design the complete current general construction technique permit Z-21.2-2092 has to be considered.

Type	Material/ surface ²⁾	Nominal anchorage depth h_{nom} [mm]	Cracked concrete					Non-cracked concrete				
			Minimum member thickness h_{min} [mm]	Permissible tension (N_{perm}) and shear loads (V_{perm}); minimum spacing (s_{min}) and edge distances (c_{min}) with reduced loads				Minimum member thickness h_{min} [mm]	Permissible tension (N_{perm}) and shear loads (V_{perm}); minimum spacing (s_{min}) and edge distances (c_{min}) with reduced loads			
			$N_{perm}^{3)}$ [kN]	$V_{perm}^{3)}$ [kN]	$s_{min}^{3)}$ [mm]	$c_{min}^{3)}$ [mm]		$N_{perm}^{3)}$ [kN]	$V_{perm}^{3)}$ [kN]	$s_{min}^{3)}$ [mm]	$c_{min}^{3)}$ [mm]	
SXRL 10	gvz	70	100	1.5	3.6	50	50	110	2.6	6.0	80	80
	R	70	100	1.5	3.6	50	50	110	2.6	6.0	80	80

¹⁾ Design according to EN 1992-4:2018 (for static resp. quasi-static loads). The partial safety factors for material resistance well as a partial safety factor for load actions of $\gamma_L = 1.4$ are considered. As a single anchor counts e.g. an anchor with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$. Accurate data see approval.

²⁾ Further steel grades, versions and technical data see current general construction technique permit.

³⁾ In the case of combinations of tensile and shear loads, bending moments with reduced or minimum spacing and edge distances (anchor groups), the design must be carried out in accordance with the provisions of the complete approval and the provisions of the EN 1992-4:2018. The given loads are valid for temperature range II. We recommend using our anchor design software C-FIX.

Loads

Frame fixing SXRL 8

Recommended loads¹⁾²⁾³⁾ for a single anchor as part of a multiple fixing of non-structural systems.
The given loads are valid for wood screws with the specified diameter.

Type			SXRL 8		
Screw diameter		[mm]	6.0	6.0	6.0
Anchorage depth	h_{nom}	[mm]	50	70	90
Minimum edge distance concrete	c_{min}	[mm]	60	80	100
Recommended loads in the respective base material $F_{rec}^{2)}$					
Concrete	$\geq C20/25$	[kN]	0.60	1.00	1.00
Solid brick	$\geq Mz 12$	[kN]	0.45	0.60	0.60
Solid sand-lime brick	$\geq KS 12$	[kN]	0.40	0.50	0.50
Vertically perforated brick	$\geq Hlz 12; \rho \geq 1.0 [kg/dm^3]$	[kN]	0.15	0.15	0.15
Perforated sand-lime brick	$\geq KSL 12$	[kN]	0.10	0.40	0.40
Aerated concrete	AAC 2	[kN]	–	0.10	0.10
Aerated concrete	AAC 4	[kN]	–	0.15	0.20

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

³⁾ Valid for zinc coated screws (gvz) and for screws made of stainless steel (R).

For exterior use of the zinc coated screws measures against incoming humidity have to be taken.

Loads

Frame fixing SXRL

Permissible loads¹⁾²⁾³⁾ of a single anchor as part of a multiple fixing of non-structural systems.
For the design the complete current assessment ETA-07/0121 has to be considered.

¹⁾ Valid for zinc coated screws (gvz) and for screws made of stainless steel (R). For exterior use of the zinc coated screws measures against incoming humidity according to assessment have to be taken.

²⁾ The required partial safety factors for material resistance as well as a partial safety factor for load actions $\gamma_L = 1.4$ are considered.

As a single anchor counts e.g. an anchor with a minimum spacing a according to Annex B 4 of the assessment.

³⁾ Valid for temperatures in the substrate up to +50 °C (resp. short term up to +80 °C). For long term temperatures up to +30 °C higher permissible loads may be possible.

⁴⁾ Valid for tensile load, shear load and oblique load under any angle. For combinations of tensile loads, shear loads and bending moments see assessment.

⁵⁾ Rotary drilling.

⁶⁾ Only valid for AAC with compression strength ≥ 2 to < 4 N/mm².

⁷⁾ Only valid for AAC with compression strength ≥ 4 N/mm².

⁸⁾ Only valid for AAC with compression strength ≥ 6 N/mm².

Frame fixing SXR

The efficient with short expansion element

Façade substructures

Façade substructures

5

Applications

- Façade, ceiling and roof substructures made of wood and metal
- Windows
- Gates and doors
- Wardrobes
- Kitchen hanging cabinets
- Squared timbers
- Beams
- TV consoles
- Wall covering
- Metal brackets
- Metal supports
- Cable ducts
- Cable trays

Advantages

- The special functioning allows for use in solid and hollow building materials with an anchorage depth of just 50 mm, ensuring an economical fixing.
- The ETA assessment covers use in a range of solid and hollow building materials, and guarantees a secure fixing.
- The specially developed combination of plugs and screws ensures the very best handling. The plug has a noticeable hold, making installation more convenient.
- Extensive range with diameters of 6, 8 and 10 mm, usable lengths up to 210 mm.

Certificates

ETA-07/0121, multiple use for non-structural applications

Fire resistance classification R90

INOX STAINLESS STEEL

Building materials

Approved for:

- Concrete \geq C12/15
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Aerated concrete
- Solid block made from lightweight and normal weight concrete
- Solid brick
- Thermal insulation blocks

Also suitable for:

- Natural stone with dense structure
- Solid panel made from gypsum

Functioning

- The SXR is suitable for push-through installation.
- The SXR expands in solid building materials. In hollow building materials the loads are transmitted to the substrate webs.
- With vertically perforated bricks, only use rotary drilling (no impact drilling).
- SXR-T with countersunk head screw is recommended for the installation of timber constructions; in the case of metal constructions, use SXR-FUS with a wide sleeve rim and a moulded washer on the screw, which also features an integrated hexagon socket.

Versions

- Zinc-plated steel
- Stainless steel
- Hot-dip galvanised steel

Installation SXR

Loads

Frame fixing SXR

Recommended loads¹⁾ of a single anchor as part of a multiple fixing of non-structural systems.
The given loads are valid for wood screws with the specified diameter.

Type			SXR 6	SXR 8
Screw diameter		[mm]	4.5	6.0
Anchorage depth	h_{nom}	[mm]	30	50
Minimum edge distance concrete	c_{min}	[mm]	50	60
Recommended loads in the respective base material F_{rec} ²⁾				
Concrete	≥ C20/25	[kN]	0.25	0.40
Solid brick	≥ Mz 12	[kN]	0.20	0.30
Solid sand-lime brick	≥ KS 12	[kN]	0.20	0.30
Vertically perforated brick	≥ Hlz 12; $\rho \geq 1.0$ [kg/dm ³]	[kN]	0.10	0.10
Perforated sand-lime brick	≥ KSL 12	[kN]	0.20	0.30

¹⁾ Valid for zinc coated screws (gvz) and for screws made of stainless steel (R). For exterior use of the zinc coated screws measures against incoming humidity have to be taken. Required safety factors are considered.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

Loads

Frame fixing SXR			
Type		SXR 8	SXR 10
Permissible loads ¹⁾²⁾³⁾ of a single anchor as part of a multiple fixing of non-structural systems. For the design the complete current assessment ETA-07/0121 has to be considered.			
Anchor diameter	[mm]	8	10
Anchorage depth	h_{nom} [mm]	50	50
Anchorage in concrete \geq C12/15			
Permissible tensile load N_{perm}	[kN]	0.99	1.79
Permissible shear load V_{perm}	zinc coated screws (gvz)	[kN]	4.23
	stainless steel screw (R)	[kN]	3.93
Minimum member thickness	h_{min} [mm]	100	100
Characteristic edge distance	$c_{cr,N}$ [mm]	70	140
Characteristic spacing	a resp. $s_{cr,N}$ [mm]	70	100
Minimum spacing	s_{min} [mm]	70	70
with an edge distance	$c \geq$ [mm]	70	210
Minimum edge distance	c_{min} [mm]	70	85
with a spacing	$s \geq$ [mm]	70	100
Anchorage in narrow concrete members ($h \geq 40$ mm) made of concrete \geq C12/15, e.g. weather shells of triple-skin outer wall panels			
Permissible tensile load N_{perm}	[kN]	–	1.19
Permissible shear load V_{perm}	[kN]	–	5.98
Anchorage in masonry			
Permissible load ⁴⁾ F_{perm} in solid brick	$\geq Mz 12/1.8; \geq NF$	[kN]	0.57
	$\geq Mz 20/1.8; \geq NF$	[kN]	0.71
Permissible load ⁴⁾ F_{perm} in solid sand-lime brick	$\geq KS 10/1.8; \geq NF$	[kN]	0.57
	$\geq KS 20/1.8; \geq NF$	[kN]	0.71
Permissible load ⁴⁾ F_{perm} in lightweight concrete block	$\geq Vbl 2; \rho \geq 1.2 \text{ kg/dm}^3$	[kN]	0.26
	$\geq Vbl 6; \rho \geq 1.6 \text{ kg/dm}^3$	[kN]	0.26
Permissible load ⁴⁾⁵⁾ F_{perm} in vertically perforated brick	$\geq HLz 12; \rho \geq 1.0 \text{ kg/dm}^3$	[kN]	0.17
Permissible load ⁴⁾ F_{perm} in perforated sand-lime brick	$\geq KSL 8; \rho \geq 1.4 \text{ kg/dm}^3$	[kN]	0.26
	$\geq KSL 12; \rho \geq 1.4 \text{ kg/dm}^3$	[kN]	0.57
Permissible load ⁴⁾⁵⁾ F_{perm} in hollow lightweight concrete blocks	$\geq Hbl 2; \rho \geq 0.7 \text{ kg/dm}^3$	[kN]	–
	$\geq Hbl 6; \rho \geq 1.2 \text{ kg/dm}^3$	[kN]	0.43
Minimum member thickness	h_{min} [mm]	100	100
Minimum spacing (single anchor)	a_{min} [mm]	250	250
Minimum spacing (anchor group)	s_{min} [mm]	100	100
Minimum edge distance (anchor group)	c_{min} [mm]	100	100
Anchorage in aerated concrete			
Permissible load ⁴⁾ F_{zul} in aerated concrete	$AAC \geq 2 \text{ N/mm}^2$	[kN]	–
	$AAC \geq 4 \text{ N/mm}^2$	[kN]	–
	$AAC \geq 6 \text{ N/mm}^2$	[kN]	–
Minimum member thickness	h_{min} [mm]	–	100
Minimum spacing (single anchor)	a_{min} [mm]	–	250
Minimum spacing (anchor group)	s_{min} [mm]	–	400
Minimum edge distance (anchor group)	c_{min} [mm]	–	100

¹⁾ Valid for zinc coated screws (gvz) and for screws made of stainless steel (R). For exterior use of the zinc coated screws measures against incoming humidity according to assessment have to be taken.

²⁾ The required partial safety factors for material resistance as well as a partial safety factor for load actions $\gamma_L = 1.4$ are considered.

As a single anchor counts e.g. an anchor with a minimum spacing according to assessment.

³⁾ Valid for temperatures in the substrate up to +50 °C (resp. short term up to +80 °C).

⁴⁾ Valid for tensile load, shear load and oblique load under any angle. For combinations of tensile loads, shear loads and bending moments see assessment.

⁵⁾ Rotary drilling.

⁶⁾ Drill holes to be made with aerated concrete hole punch.

Frame fixing FUR

The lamella plug with gentle power transfer

Façade substructures

Timber substructures

5

Applications

- Façade, ceiling and roof substructures made of wood and metal
- Windows
- Gates and doors
- Squared timbers
- Beams
- Wall covering

Certificates

ETA-13/0235, multiple use for non-structural applications

Fire resistance classification R90

INOX STAINLESS STEEL

Advantages

- The operating principle with an anchorage depth of 70 mm and proven asymmetrical teeth, makes it an assembly-friendly anchor even in an unknown base material.
- The slim geometry guarantees a simple

- installation, even in cases involving thick wooden fixtures and narrow drill holes.
- Range available with diameters of 8 and 10 mm and usable lengths up to 160 mm.

Building materials

Approved for:

- Concrete \geq C12/15
- Vertically perforated brick
- Perforated sand-lime brick
- Solid sand-lime brick
- Solid brick made from lightweight concrete
- Solid brick

Also suitable for:

- Natural stone with dense structure
- Solid panel made from gypsum
- Hollow blocks made from lightweight concrete
- Three-layer composite exterior wall panels
- Lightweight aggregate concrete

Functioning

- The FUR is suitable for push-through installation.
- Screwing in the screw causes the individual teeth to expand. In solid materials, the teeth create even expansion forces. In hollow materials, the teeth expand through the solid part of the block and form an undercut in the cavity.
- With vertically perforated bricks, only use rotary drilling (no impact drilling).
- FUR-T with countersunk head screw is recommended for the installation of timber constructions; in the case of metal constructions, use FUR-FUS with a wide sleeve rim and a moulded washer on the screw.

Versions

- Zinc-plated steel
- Stainless steel

Installation FUR

Loads

5

Frame fixing FUR 10

Permissible loads¹⁾²⁾³⁾ of a single anchor as part of a multiple fixing of non-structural systems. For the design the complete current assessment ETA-13/0235 has to be considered.

Type		FUR 10
Anchor diameter		[mm] 10
Anchorage depth	h_{nom}	[mm] 10
Anchorage in concrete \geq C12/15		
Permissible tensile load N_{perm}		[kN] 1.79
Permissible shear load V_{perm}	zinc coated screws (gvz)	[kN] 5.37
	stainless steel screw (R)	[kN] 4.98
Minimum member thickness	h_{min}	[mm] 110
Characteristic edge distance	$c_{cr,N}$	[mm] 140
Characteristic spacing	a resp. $s_{cr,N}$	[mm] 90
Minimum spacing	s_{min}	[mm] 70
with an edge distance	$c \geq$	[mm] 140
Minimum edge distance	c_{min}	[mm] 70
with a spacing	$s \geq$	[mm] 210
Anchorage in masonry		
Permissible load ⁴⁾ F_{perm} in solid brick	\geq Mz 10, NF; $\rho \geq 1.8 \text{ kg/dm}^3$	[kN] 0.71
	\geq Mz 12, NF; $\rho \geq 1.8 \text{ kg/dm}^3$	[kN] 0.86
Permissible load ⁴⁾ F_{perm} in solid sand-lime brick	\geq KS 10, NF; $\rho \geq 1.8 \text{ kg/dm}^3$	[kN] 0.57
	\geq KS 20, NF; $\rho \geq 1.8 \text{ kg/dm}^3$	[kN] 0.71
Permissible load ⁴⁾ F_{perm} in lightweight concrete block	\geq Vbl 6; $\rho \geq 1.6 \text{ kg/dm}^3$	[kN] 0.57
	\geq Vbl 8; $\rho \geq 1.6 \text{ kg/dm}^3$	[kN] 0.86
Permissible load ⁴⁾⁵⁾ F_{perm} in vertically perforated brick, Form B (e.g. Poroton)	\geq HLz 12; $\rho \geq 1.4 \text{ kg/dm}^3$	[kN] 0.37
	\geq HLz 20; $\rho \geq 1.4 \text{ kg/dm}^3$	[kN] 0.57
Permissible load ⁴⁾ F_{perm} in perforated sand-lime brick	\geq KSL 12, 2 DF; $\rho \geq 1.6 \text{ kg/dm}^3$	[kN] 0.57
	\geq KSL 16, 2 DF; $\rho \geq 1.6 \text{ kg/dm}^3$	[kN] 0.71
Minimum member thickness	h_{min}	[mm] 110
Minimum spacing (single anchor)	a_{min}	[mm] 250
Minimum spacing (anchor group)	s_{min}	[mm] 100
Minimum edge distance	c_{min}	[mm] 100

¹⁾ Valid for zinc coated screws (gvz) and for screws made of stainless steel (R). For exterior use of the zinc coated screws measures against incoming humidity according to assessment have to be taken.

²⁾ The partial safety factors for material resistance as regulated in the assessment as well as a partial safety factor for load actions $\gamma_L = 1.4$ are considered.

As a single anchor counts e.g. an anchor with a minimum spacing according to assessment.

³⁾ Valid for temperatures in the substrate up to +50 °C (resp. short term up to +80 °C).

⁴⁾ Valid for tensile load, shear load and oblique load under any angle. For combinations of tensile loads, shear loads and bending moments see assessment.

⁵⁾ Rotary drilling.

Loads

Frame fixing FUR 8

Highest recommended loads¹⁾²⁾³⁾ for a single anchor for multiple fixings of non-structural applications.
The given loads are valid for fischer safety screws with the specified diameter.

Type		FUR 8
Diameter of the safety screw	[mm]	6.0
Anchorage depth	h_{nom} [mm]	70
Minimum edge distance concrete	c_{min} [mm]	50
Recommended loads in the respective base material F_{rec} ²⁾		
Concrete	\geq C12/15 [kN]	1.00
Solid brick	\geq Mz 12 [kN]	0.60
Solid sand-lime brick	\geq KS 12 [kN]	0.60

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

³⁾ Valid for zinc coated screws and for screws made of stainless steel. For exterior use of the zinc coated screws measures against incoming humidity have to be taken.

Anti-corrosion spray FTC-CP

The elastic protective coating for use with frame fixings

Sealing of the screw heads

Sealing of the screw heads

5

Applications

- Façade anchorings in line with the assessments for frame fixings, e.g. SXR, SXRL and FUR.
- For all substructures, e.g. made from wood, aluminium, metal.

Building materials

- Zinc-plated frame fixings
- Corrosive metals

Advantages

- FTC-CP professionally prevents the penetration of moisture into the anchor shaft and securely protects the connection from corrosion - as required in the ETA assessments.
- Once dry, the optimised formulation provides a long-lasting, elastic protective

coating with a secure hold and a high abrasion resistance.

- The thixotropic anti-corrosion agent is also ideally suited to other corrosion protection applications and thus offers a wide range of uses.

Functioning

- Thixotropic, bitumen-based anti-corrosion agent.
- Good stability under load; non-drip, no spray mist.
- Shake canister for at least 2 minutes from the time the mixing balls can be heard.
- Spray as evenly as possible from a distance of 15 to 20 cm.
- Ideal processing temperature +16 °C to +25 °C.
- Quick-drying (dried through after 3-4 hours at 600 µm and 20 °C).
- Temperature-resistant from -25 °C to 80 °C.
- Salt and water-resistant, and resistant to abrasion.
- With one can about 300 screw heads can be coated.

Hammerfix N

The hammer-in plug for a simple, fast and economical installation

Timber substructures

Cable ducts

5

Applications

- Substructures made of wood and metal
- Wall connection or plaster profiles
- Slides
- Sheets
- Cable and pipe clips
- Perforated tapes

Advantages

- The rapid hammerset installation reduces the amount of time required and allows for an economic series installation.
- The integrated hammer-in stop prevents the plug from expanding prematurely (jamming), thus enabling a problem-free installation.
- Together with the cross-slot recess, the

thread of the nail screw allows the screw to be removed, thus allowing for subsequent dismantling.

- The wide range of diameters, usage lengths and head shapes provides the correct plug for every fixing.

Characteristics

INOX STAINLESS STEEL

Building materials

- Concrete
- Solid sand-lime brick
- Building brick
- Natural stone
- Solid brick made from lightweight concrete
- Aerated concrete
- Solid panel made from gypsum
- Vertically perforated brick
- Perforated sand-lime brick
- Hollow blocks made from lightweight concrete

Functioning

- The Hammerfix N is suitable for push-through installation.
- When hammered in, the nail screw causes the plug to expand in two directions, thus providing a secure anchoring in the building material.
- Countersunk head plugs are recommended for the installation of timber constructions; in the case of metal constructions, use plugs with cylindrical head, and use flat edge plugs for long holes.

Versions

- Zinc-plated steel
- Stainless steel

Aerated concrete	$\geq AAC 2$	[kN] 0.03	0.04	0.05	0.10
Aerated concrete	$\geq AAC 4$	[kN] 0.07	0.10	0.13	0.16

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

³⁾ The values have to be reduced by 50% for N 6 x 40/7 P K.

Hammerfix N Green

The hammer-in plug for simple, fast and economic installation

Cable fixing

Timber substructures

5

Applications

- Substructures made of wood and metal
- Wall connection or plaster profiles
- Slides
- Sheets
- Cable and pipe clips
- Perforated tapes

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- Just as effective, secure and durable as regular hammerfix N plugs.
- The rapid push-through and hammer-set installation reduces the amount of work required and allows for economic series

installation.

- The integrated hammer-in stop prevents the plug from expanding prematurely, thus enabling problem-free installation.
- Together with the cross-slot recess, the thread of the nail screw allows the screw to be removed, thus allowing for subsequent dismantling.

Characteristics

Building materials

- Concrete
- Solid sand-lime brick
- Building brick
- Natural stone
- Solid brick made from lightweight concrete
- Aerated concrete
- Solid panel made from gypsum
- Vertically perforated brick
- Perforated sand-lime brick
- Hollow blocks made from lightweight concrete

Functioning

- The hammerfix N Green is suitable for push-through installation.
- The easiest installation: drill, knock in and you're done.
- When being hammered in, the nail screw causes the plug to expand in two directions, thus providing a secure anchoring in the building material.

Installation N Green

Nail sleeve FNH

The user-friendly spring sleeve for light fixings in solid building materials

5

Timber substructures

Applications

- Squared timbers
- Substructures made of wood and metal
- Metal profiles

Advantages

- No plugs or screws are required for the one-piece nail sleeve. This guarantees a simple and easy installation.
- The geometry of the nail sleeve makes

it easy to push it into the drill hole. This saves time and money.

Building materials

- Concrete
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick

Functioning

- The FNH nail sleeve is suitable for push-through installation.
- The nail sleeve is hammered in and expands its entire length in the hole.
- FNH is suitable for interior applications and for temporary external fixings.

Installation FNH

5

Recommended shear load V_{rec}	[kN]	0.40	1.40	2.00

¹⁾ Required safety factors are considered.

Window frame fixing F-S

The nylon fixing for stress-free stand-off installation of window and door frames

Window frames

5

Applications

- Window frames
- Door frames

Advantages

- The operating principle of the plug prevents the frame from being pulled against the substrate, and ensures a stress-free and long-lasting fixing of the frame.
- The special plug geometry anchors the metal and plastic profiles against com-

pressive and tensile loads, and allows for a secure hold of the window frame.

- The cover cap (available separately) can be used to discreetly cover the screw head.

Certificates

Building materials

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Aerated concrete
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The F-S is suitable for push-through installation.
- By tightening the screw, the glass-fibre-reinforced plastic cone is drawn into the sleeve, whereby it is expanded and wedged inside the drill hole. The window frames are thus fixed in a stress-free manner.
- The maximum installation torque is 3 Nm for F 8 S and 6 Nm for F 10 S.

Installation F-S

Metal frame fixing F-M

The fixing for stress-free installation of window and door frames with fire classification

Fire protection doors

Applications

- Window frames
- Door frames
- Squared timbers

Certificates

Fire resistance classification
R120

Advantages

- The F-M metal frame plug achieves fire resistance R 120. This allows for use in areas where fire resistance is relevant.
- The operating principle prevents the window frame from being pulled against the substrate, and ensures a stress-free and long-lasting fixing of the frame.
- The special plug geometry anchors the

metal and plastic profiles against compressive and tensile loads, and allows for a secure hold of the window frame.

- The cover caps (available separately) can be used to discreetly cover the screw heads.

Building materials

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Aerated concrete
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The F-M is suitable for push-through installation.
- By tightening the screw, the cone is drawn into the sleeve and the fixing is expanded which wedges it inside the drill hole. The window frames are thus fixed in a stress-free manner.
- The maximum installation torque is 5 Nm.

Installation F-M

Window frame screws FFSZ and FFS

The economical special screw for window installation

5

Window frames

Applications

- Window frames made of wood, plastic and aluminium
- Door frames
- Squared timbers

Advantages

- Screw installation without plug for economical processing.
- The small drill bit diameter of 6 mm allows for efficient series installation.
- The continuous thread ensures a stress-free fixing of the frame in the substrate.
- The high-low-thread at the screw tip as well as several cutting notches reduce the amount of force required for screwing

in the screws. The installation process can be completed without excessive effort.

- With two head types applicable for all common frame materials.
- According to the ift Rosenheim suitable for the fixation of a plastic window in brick masonry.

Certificates

Test Report No.: 14-000559-PR02

Building materials

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Solid brick made from lightweight concrete
- Solid brick
- Aerated concrete

Functioning

- Note the drill hole and screw-in depths for the different building materials listed in the table.
- Cylinder head screws are recommended for recessed installation in wooden profiles.
- Flat head screws are recommended for installation in plastic and aluminium profiles.

Minimum edge distance ²⁾	c_{min}	[mm]	-	-	40	-	-	40

¹⁾ Required safety factors are considered.As a single screw counts e.g. a screw with a spacing $s \geq 3 \times h_{ef}$ and an edge distance $c \geq 1.5 \times h_{ef}$.²⁾ Minimal possible edge distance while reducing the recommended loads.³⁾ Rotary drilling.⁴⁾ Valid for tensile load, shear load and oblique load under any angle.⁵⁾ Without pre-drilling.

Adjustable fixing S10J

The fixing for infinite adjustment of timber constructions in all standard solid building materials

5

Stand-off installations

Applications

- Substructures made of wooden battens of 20-25 mm thickness.

Advantages

- The combination of adjustment plug and spacing screw allows for universal usage in wooden and solid building materials.
- The special operating principle of the

adjustable fixing S10J and the spacing screw allows for infinite adjustment. This saves on the use of wedges and blocks when fixing the fixture.

Certificates

Building materials

- Concrete
- Wood
- Solid sand-lime brick
- Natural stone with dense structure
- Aerated concrete
- Solid panel made from gypsum
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The S10J is suitable for push-through installation.
- Once the screw has been screwed in, the fixture distance can be infinitely adjusted by modifying the rotation direction.
- For the fixing of wood on wood, e.g. in the roof truss, only use adjustment screw JS.

Installation S10J

Installation JS

Adjustable screw JUSS

The adjustable screw for fast and infinitely adjustable installation of timber constructions

5

Stand-off installations

Stand-off installations

Applications

- Substructures made of wooden battens of 20-30 mm thickness.

Advantages

- The special operating principle of the adjustable screw JUSS allows for infinite adjustment. This saves on the use of wedges and blocks when fixing the

fixture.

- The self-drilling thread cuts directly into the wood. Therefore pre-drilling is not required. For the installation in hardwood pre-drilling is recommended.

Building materials

- Wood and wooden materials or wooden panels

Functioning

- The JUSS is suitable for push-through installation.
- Once the screw has been screwed in, the parallel thread below the screw head causes the fixture to initially pull against the substrate. The fixture distance can then be infinitely adjusted by modifying the rotation direction.

Installation JUSS

Spacing screw ASL

The spacing screw for flexible positioning and alignment of wooden fixtures

5

Stand-off installations

Stand-off installations

Applications

- Window frames
- Door frames
- Squared timbers
- Claddings
- Substructures made of wood

Advantages

- The coordinated threads with the same pitch allow for the pin-point positioning and alignment of the fixture, which can even be mounted at an angle to the screw. This allows for an exact and flexible fixing.
- During the installation, the fixture is not pulled onto the substrate, instead it is

brought directly to the desired distance and position. This allows for a simple and exact installation.

- When combined with SX 8 and UX 8 plugs, it can be used in almost all wall materials, guaranteeing a secure fixing.

Building materials

- Without plug: suitable for wooden materials and wooden panels
- With SX or UX plugs: all concrete and masonry materials

Functioning

- The ASL is suitable for push-through installation.
- Pre-drill the fixture at the desired angle in order to achieve the correct positioning and alignment.
- When screwing in the screw, the external thread cuts into the pre-drilled fixture, and fixes it into the stipulated position.
- The angled position of the screws (15° - 30°) allows high shear loads to be supported.

Installation ASL

Stand-off installation TherMax 8/10

The thermally separated stand-off installation in external thermal insulation composite systems (ETICS)

External lighting

Down pipes

5

Applications

For the thermally separated fixing of:

- Signs
- Lighting
- Letter boxes
- Motion detectors
- Downpipes
- Lightning rods
- Blind guide rails

Advantages

- The stand-off installation allows for the fixture to be adjusted to the exact position required, whereby pressure marks and damage to the ETICS are avoided.
- The plastic cone creates a thermal barrier between the fixture and the inner fixture, and offers an energy-optimised fixing.
- The glass-fibre-reinforced plastic cone cuts its own way through the ETICS with

a positive fit, and allows for a simple and fast installation without the need for any special tools.

- Combining TherMax 8 and 10 with the universal plug UX provides a secure anchoring in the substrate.
- Without UX plug direct mounting in wood substrate is possible after pre-drilling.

Building materials

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Building brick
- Aerated concrete
- Wood

Functioning

- The TherMax 8 and 10 systems are suitable for pre-positioned installation.
- The self-tapping, glass-fibre-reinforced cone cuts its own way through the plaster into the insulation during installation.
- The anti-cold cone uses a thermal barrier to minimise heat losses.
- Installation without any special tools.
- For use in wood without plug, the wood (footnote below load table) as well as the plaster has to be pre-drilled:
TherMax 8:
 $d_{02} = 14 \text{ mm}$, $h_{02} = 50 \text{ mm}$;
TherMax 10:
 $d_{02} = 18 \text{ mm}$, $h_{02} = 50 \text{ mm}$
- The extensive range features fitting options with metric screws (M6/8/10), sheet screws (6.3 mm), chipboard screws (6.0 mm) or chipboard screws (4.5 - 5.5 mm) when using an SX 5 expansion plug.

Installation in masonry

Installation in wooden substrate

Loads

Stand-off installation TherMax 8 and 10				
Recommended loads ¹⁾ of a single anchor in concrete and masonry.				
Type		TherMax 8	TherMax 10	
Supplied type of plug for the anchorage in the base material		UX 10 x 60	UX 12 x 70	
Recommended tensile loads in the respective base material N_{rec} ²⁾				
Concrete ^{3) 4)}	≥ C20/25	[kN] 1.00	1.00	
Solid brick ³⁾⁴⁾	≥ Mz 12	[kN] 0.50	0.70	
Perforated sand-lime brick ³⁾⁴⁾	≥ KSL 12	[kN] 0.60	0.80	
Vertically perforated brick ⁴⁾	≥ Hlz 12	[kN] 0.20	0.30	
Aerated concrete ³⁾⁴⁾	≥ AAC 4	[kN] 0.40	0.60	
Recommended shear load V_{rec} , valid für all above mentioned base materials for the stated insulation thickness				
External Thermal Insulation Composite System ⁵⁾		≤ 240 mm	[kN] 0.15	0.20

¹⁾ Required safety factors are considered.

²⁾ The drilling method is to be adapted to the building material used. As different joint qualities are possible, the given values only apply for installation in the brick.

³⁾ The given recommended tensile loads apply for fastenings with metric screws.

When using chipboard screws with diameter 6.0 mm they have to be reduced to 0.35 kN.

⁴⁾ The given recommended tensile loads apply for fastenings with metric screws.

When using a SX 5-plug chipboard screws with diameter 4.5 - 5.5 mm they have to be reduced to 0.1 kN.

⁵⁾ Values are valid for an ETICS made from PS- respectively PU-rigid foam panels. Thickness of rendering minimum 6 mm.

Loads

Stand-off installation TherMax 8 and 10				
Recommended shear loads ¹⁾ for a single anchor.				
Type		UX 10 + TherMax 8 ³⁾	UX 12 + TherMax 10 ³⁾	
Recommended shear loads V_{rec} ¹⁾				
External thermal insulation composite system ²⁾		≤ 240 mm	[kN] 0.15	0.20

¹⁾ Required safety factors are considered.

²⁾ Values are valid for an ETICS made from PS- respectively PU-rigid foam panels. Thickness of rendering minimum 6 mm.

³⁾ In wood installation without plug.

Loads

Stand-off installation TherMax 8 and 10			
Recommended tensile loads ¹⁾ for a single anchor in wood.			
Type		TherMax 8	TherMax 10
Recommended tensile loads in the respective base material N_{rec} ²⁾			
Beech	≥ D35	[kN] 1.00 ³⁾	1.00 ⁵⁾
Spruce	≥ C24	[kN] 1.00 ⁴⁾	1.00 ⁵⁾

¹⁾ Required safety factors are considered.

²⁾ Installation without UX-plug. Edge distances and spacings following Eurocode 5.

³⁾ Pre-drilled wood with diameter 6 mm.

⁴⁾ Pre-drilled wood with diameter 5 mm.

⁵⁾ Pre-drilled wood with diameter 7 mm.

Stand-off installation TherMax 12/16

The approved stand-off installation with thermal barrier in external thermal insulation composite systems

Awnings

Satellite dishes and air conditioning units

5

Applications

For the thermally separated fixing of:

- Awnings
- Canopies
- French balcony railings
- Air conditioning units
- Satellite dishes

Advantages

- When combined with the injection mortars FIS EM Plus, FIS V Plus, FIS SB and FIS GREEN, the stand-off installation is approved for high loads in a range of materials. This allows for a secure fixing.
- Usable lengths of 62 to 290 mm can be covered with just one TherMax.
- The plastic cone creates a thermal barrier

- between the fixture and the inner fixture, and offers an energy-optimised fixing.
- The glass-fibre-reinforced plastic cone cuts its own way through the ETICS with a positive fit, and allows for a simple, fast and adjustable installation without the need for any special tools.

Certificates

Building materials

Approved for:

- Concrete, cracked and non-cracked
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Solid brick
- Aerated concrete

Versions

- Zinc-plated steel
- Stainless steel

Functioning

- The TherMax 12 and 16 systems are suitable for pre-positioned installation.
- The self-tapping, glass-fibre-reinforced cone cuts its own way through the plaster into the insulation during installation.
- The anti-cold cone uses a thermal barrier to minimise heat losses.
- In the case of resistant plaster (e.g. thick cement plaster), it is recommended that the TherMax cutting blade included is used for grinding out the plaster.
- The sealing of the annular gap with sealing adhesive Multi MS seals the facade at plaster level.

For the design the complete approval Z-21.8-1837 as well as the European Technical Assessments ETA-20/0603, ETA-20/0729 or ETA-12/0258 have to be considered.

¹⁾ The required partial safety factors for material resistance as well as a partial safety factor for load actions of $\gamma_L = 1,4$ are considered.

²⁾ Set-up of one or more TherMax in a row in direction of shear, for which the clamping of the attachment prevents a torsion on attachment side due to a sufficient stiffness of the attachment or connecting construction. For a clamping on base substrate side only, see approval.

³⁾ For combinations of tensile and shear loads as well as reduced edge distances or spacings (anchor groups) see approval. The values for tensile loads in masonry are valid only, if the joints of the masonry is completely filled with masonry mortar. If the joints are not filled with masonry mortar are not filled with masonry mortar and the edge distance towards the joints is less than c_{min} , the loads have to be reduced by the factor $a_s = 0,75$. The values for shear loads are valid only, if the joints are filled with masonry mortar. For not completely filled joints they have to be handled like a free edge and a minimum edge distance c_{min} of the anchors to the joints has to be observed. For compression loads and perforated bricks or hollow blocks see approval. Calculative assumed thickness of the attachment $t_{ix} = 6$ mm.

⁴⁾ In vertically perforated bricks HLZ, perforated sand-lime bricks KSL as well as hollow blocks made of light weight concrete Hbl the TherMax 12 (standard version) can bridge non-load bearing layers up to 110 mm and the TherMax 16 can bridge them up to 170 mm. Larger usable lengths up to 300 mm are possible, if other perforated sleeves and where required longer anchor rods are used and again the anchorage depth gets reduced - see approval.

⁵⁾ The stated permissible loads are valid for anchorages in dry base substrates - use category d/d - and for temperatures up to +50 °C (resp. short-term up to +80 °C) in the area of the injection mortar and during drill hole cleaning in accordance with the approval. The load values apply to anchor rods on base substrate side made of zinc-plated steel grade 8.8 - for other steel grades or stainless steel see approval.

⁶⁾ Complies with the permissible tensile load of the TherMax cone.

⁷⁾ Intermediate values of the shear load may be linearly interpolated in dependence of "e", if nothing else is mentioned in the approval.

⁸⁾ In solid bricks Mz and solid sand-lime bricks KS the TherMax 12 (standard version) can bridge non-load bearing layers up to 190 mm (140 mm in aerated concrete) and the TherMax 16 can bridge them up to 300 mm (270 mm in aerated concrete) - but in solid brick Mz and aerated concrete the above load values have to be reduced. In concrete the TherMax 12 (standard version) can bridge non-loadbearing layers up to 170 mm and the TherMax 16 can bridge them up to 290 mm. Larger usable lengths up to 300 mm are possible, if longer anchor rods are used and again in solid bricks Mz if the anchorage depth (compared to above values) gets reduced where required - see approval.

⁹⁾ Minimum spacings for at the same time reduced permissible loads, where required.

Loads

Stand-off installation TherMax 12 and 16 with load-bearing anchor rod made of stainless steel R-70 and a displacement of 3 mm

The below load table is valid for short-term loading (e.g. wind load). Measures for sealing see approval, section 3.2.4.

Highest permissible loads¹⁾⁵⁾⁹⁾ of a TherMax within an anchor group²⁾ in concrete with the injection mortars FIS V Plus or FIS SB and in masonry with the injection mortar FIS V Plus.

Type	Minimum effective anchor-rod depth $h_{ef}^{4)8)}$ [mm]	Permissible tensile load $N_{perm}^{3)}$ [kN]	Permissible shear load at $e = 62$ mm $V_{perm}^{3)}$ [kN]	Permissible shear load at $e = 100$ mm $V_{perm}^{3)}$ [kN]	Permissible shear load at $e = 120$ mm $V_{perm}^{3)}$ [kN]	Permissible shear load at $e = 140$ mm $V_{perm}^{3)}$ [kN]	Permissible shear load at $e = 160$ mm $V_{perm}^{3)}$ [kN]	Permissible shear load at $e = 180$ mm $V_{perm}^{3)}$ [kN]	Permissible shear load at $e = 200$ mm $V_{perm}^{3)}$ [kN]	Permissible shear load at $e = 250$ mm $V_{perm}^{3)}$ [kN]	Permissible shear load at $e = 300$ mm $V_{perm}^{3)}$ [kN]	Minimum member thickness h_{min} [mm]	Minimum spacing $s_{min \parallel} / s_{min \perp}^{9)}$ [mm]	Minimum edge distance c_{min} [mm]

For the design the complete approval Z-21.8-1837 as well as the European Technical Assessments ETA-20/0603, ETA-20/0729 or ETA-12/0258 have to be considered.

- ¹⁾ The required partial safety factors for material resistance as well as a partial safety factor for load actions of $\gamma_L = 1,4$ are considered.
- ²⁾ Set-up of one or more TherMax in a row in direction of shear, for which the clamping of the attachment prevents a torsion on attachment side due to a sufficient stiffness of the attachment or connecting construction. For a clamping on base substrate side only, see approval.
- ³⁾ For combinations of tensile and shear loads as well as reduced edge distances or spacings (anchor groups) see approval. The values for tensile loads in masonry are valid only, if the joints of the masonry is completely filled with masonry mortar. If the joints are not filled with masonry mortar are not filled with masonry mortar and the edge distance towards the joints is less than c_{min} , the loads have to be reduced by the factor $a_s = 0,75$. The values for shear loads are valid only, if the joints are filled with masonry mortar. For not completely filled joints they have to be handled like a free edge and a minimum edge distance c_{min} of the anchors to the joints has to be observed. For compression loads and perforated bricks or hollow blocks see approval. Calculative assumed thickness of the attachment $t_{fix} = 6$ mm.
- ⁴⁾ In vertically perforated bricks HLz, perforated sand-lime bricks KSL as well as hollow blocks made of light weight concrete Hbl the TherMax 12 (standard version) can bridge non-load bearing layers up to 110 mm and the TherMax 16 can bridge them up to 170 mm. Larger usable lengths up to 300 mm are possible, if other perforated sleeves and where required longer anchor rods are used and again the anchorage depth gets reduced - see approval.
- ⁵⁾ The stated permissible loads are valid for anchorages in dry base substrates - use category d/d - and for temperatures up to +50 °C (resp. short-term up to +80 °C) in the area of the injection mortar and during drill hole cleaning in accordance with the approval. The load values apply to anchor rods on base substrate side made of stainless steel of the grade A4-70.
- ⁶⁾ Complies with the permissible tensile load of the TherMax cone.
- ⁷⁾ Intermediate values of the shear load may be linearly interpolated in dependence of "e", if nothing else is mentioned in the approval.
- ⁸⁾ In solid bricks Mz and solid sand-lime bricks KS the TherMax 12 (standard version) can bridge non-load bearing layers up to 190 mm (140 mm in aerated concrete) and the TherMax 16 can bridge them up to 300 mm (270 mm in aerated concrete) - but in solid brick Mz and aerated concrete the above load values have to be reduced. In concrete the TherMax 12 (standard version) can bridge non-loadbearing layers up to 170 mm and the TherMax 16 can bridge them up to 290 mm. Larger usable lengths up to 300 mm are possible, if longer anchor rods are used and again in solid bricks Mz if the anchorage depth (compared to above values) gets reduced where required - see approval.
- ⁹⁾ Minimum spacings for at the same time reduced permissible loads, where required.

Remedial wall tie mechanical VBS-M

The quick façade repair for two-leaf cavity walls

Facing masonry

Repairing outer leafs

5

Applications

- VBS-M is especially suitable for applications where external thermal insulation composite systems (ETICS) have been previously installed.
- Retroerspective repair of facing masonry.

Advantages

- The approved fixing in stone and in joints from at least 50 mm facing masonry provides a high degree of flexibility and security.
- Use in joints and with a low anchorage depth of just 50 mm allows for a quick and economical installation.
- The small anchor rim and screw head

allow for a surface-flush or deep-set installation.

- The drill hole can be retrospectively sealed so that it is no longer visible in the façade.
- A drip coil prevents condensate running into the load-bearing layer, thus preventing frost and corrosive damage.

Certificates

Building materials

- Facing masonry with and without an air layer

Versions

- Zinc-plated steel
- Stainless steel

Functioning

- The remedial wall tie VBS-M is set in the load-bearing layer and into facing masonry using push-through installation.
- In accordance with the approval, no drill hole cleaning is required.
- The two expansion zones in the load-bearing layer and in the facing masonry ensure a secure fixation.
- The plug doesn't fix into the facing masonry until the head grips into the load-bearing layer. This ensures the very best installation safety.

Installation VBS-M

DuoPower

The duo of power and intelligence

Wall applications

Wall consoles

6

Applications

- TV consoles
- Lighting
- Shelves
- Mirror cabinets
- Letter boxes
- Pictures
- Fixing blinds
- Curtain rails
- Wash basin fixings
- Plumbing and heating fixings
- Bath and toilet installations
- Wall cabinets
- Range hood

Advantages

- Two component materials for top load values and intelligent functioning (expansion, folding, knotting), depending on building material - solid, perforated or panel material.
- Great feedback (feel-good-factor) of the plug. You can feel exactly when the plug is installed perfectly.
- The narrow plug rim prevents slipping into the drill hole.
- The serrated anti-rotation feature interlock in the building material and prevents rotation in the drill hole during installation.
- The greater anchorage depth of the DuoPower 6 x 50, 8 x 65 and 10 x 80 means that the plug is especially suited to fixings in hollow building materials, aerated concrete and to bridge plaster.

Certificates

Building materials

- Concrete
- Solid brick
- Solid sand-lime brick
- Aerated concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Plasterboard
- Gypsum plasterboard and gypsum fibreboards
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete or similar
- Natural stone
- Chipboard
- Solid panel made from gypsum
- Solid brick made from lightweight concrete

Functioning

- The grey component made from high quality nylon automatically activates for the optimum product function (expansion, folding, knotting) for the best hold.
- The red expansion wings support the safe expansion and offer additional safety for the grey component.
- The smooth-running opening allows the simple positioning of the screw and the secure guiding and fixing in the screw channel.
- The required screw length is given by the plug length + fixture thickness + the screw diameter.
- Suitable for wood and chipboard screws, as well as stud screws.
- In the case of fixing boards, the threadless part of the screw must not be longer than the fixture.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

³⁾ Load determination on plastered wall.

DuoSeal

The sealing plug for wet areas

Fixings on tiled surfaces

Accessories in wet areas

6

Applications

Tiled surfaces in wet areas, like:

- Bathrooms, showers and toilets
- Kitchen
- Garage
- Laundry room
- Swimming pool
- Steam bath
- Sports facilities

Suitable for:

- Bathroom accessories
- Fittings
- Shower cubicles
- Mirrors
- Light shelves
- Trays
- Kitchen accessories

Advantages

- The DuoSeal completely seals drill holes in tiles without additional sealing compound and thus prevents structural damage caused by moisture in the building material.
- The DuoSeal is ideally suited for tiled surfaces which are exposed to very frequent splash water and temporarily accumulating water.
- The watertightness is confirmed in accordance with ETAG 022 and DIN 18534 up to the water exposure class W3-I. In any case, please take note of the general

national regulations on the use of plugs in wet areas.

- It's red component ensures a secure hold in all building materials. Thus, the DuoSeal achieves the same load values as conventional nylon plugs.
- The stainless-steel screw included in the set is ideally suited for installation in wet areas and avoids rusting.
- The soft plastic rim closes the drill hole completely and flexibly adapts to the shape of the attachment part.

Certificates

Building materials

- Concrete
- Solid brick
- Solid sand-lime brick
- Aerated concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Gypsum plasterboard
- Gypsum fibreboard
- Plasterboard

Functioning

- The DuoSeal is only suitable for application on tiles and can only be mounted as pre-position installation.
- The DuoSeal can be installed gently on tiles with just a few hammer blows. The rim of the shaft prevents the plug from being set too deep and additionally seals the drill hole.
- The red component made of high-quality nylon automatically activates the optimum function principle depending on the building material for best hold.
- The soft grey component is pressed against the drill hole wall by screwing in the screw and seals the drill hole completely.
- The grooves in the plug shaft compensate for unevenness in the hole, so that the sealing function is guaranteed even if the drill hole is not perfect.

Loads

DuoSeal

Recommended loads¹⁾ for a single anchor.

Type		DuoSeal 6	DuoSeal 8
Screw diameter	[mm]	4.5	6.0
Recommended loads in the respective base material F_{rec} ^{2) 3)}			
Concrete	≥ C20/25	[kN] 0.40	0.60
Solid brick	≥ Mz 12	[kN] 0.20	0.30
Solid sand-lime brick	≥ KS 12	[kN] 0.30	0.40
Aerated concrete	≥ ACC 2	[kN] 0.10	0.10
Vertically perforated brick	≥ HLZ 12	[kN] 0.20	0.30
Perforated sand-lime brick	≥ KSL 12	[kN] 0.30	0.40
Gypsum plasterboard impregnated (green)	12.5 mm	[kN] 0.10	0.10 ⁴⁾
Gypsum plasterboard impregnated (green)	2 x 12.5 mm	[kN] 0.15	0.15
Gypsum plasterboard hard and impregnated (e. g. Knauf Diamant board or Rigipis Die Harte)	12.5 mm	[kN] 0.15	0.15
Gypsum plasterboard hard and impregnated (e. g. Knauf Diamant board or Rigipis Die Harte)	2 x 12.5 mm	[kN] 0.20	0.20
Gypsum fibreboard	12.5 mm	[kN] 0.20	0.20
Gypsum block	$\rho \geq 0.85 \text{ kg/dm}^3$	[kN] 0.10	0.10

¹⁾ Required safety factor is considered.

Load values are valid for using the supplied screws and under consideration of the total tile thickness: tile + tile glue + sealing compound.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

³⁾ Values apply to tile thickness 5 - 10 mm and total tile thickness 9.5 - 14.5 mm.

⁴⁾ Value applies to tile thickness 8 - 10 mm and total tile thickness 12.5 - 14.5 mm.

Universal plug UX

The nylon plug for all building materials

Mirror fixings

Pictures

Applications

- Pictures
- Lighting
- Skirting
- Light cabinets
- Towel rails
- Mirror cabinets
- Curtain rails
- Wash basin fixings
- TV consoles
- Plumbing and heating fixings

Advantages

- The universal operating principle (knotting or expanding) allows for use in all solid, hollow and board building materials. Thus the UX is the correct choice for unknown base materials.
- The UX's angled connection ridges allow for optimum screw guidance. Serrated

- anti-rotation locks prevent rotation in the drill hole. This guarantees the greatest possible installation safety.
- Fixing sets with screws, eye screws and hooks provide the right solution for all applications.

Certificates

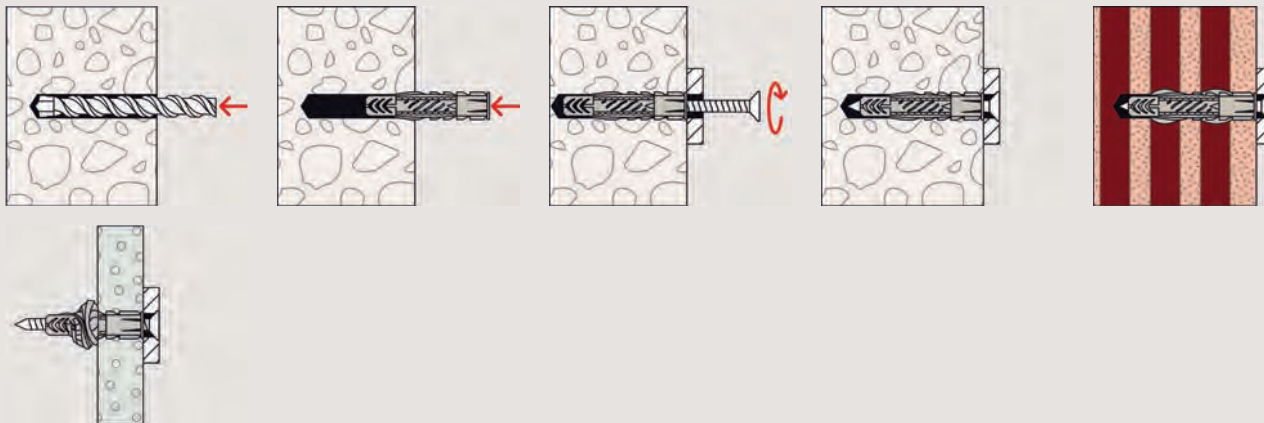

Building materials

- Concrete
- Gypsum plasterboard and gypsum fibreboards
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone
- Aerated concrete
- Chipboard
- Solid panel made from gypsum
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The UX with rim is suitable for pre-positioned installation; the UX without rim is suitable for push-through installation.
- Turning in the screw causes the UX to expand in the solid building material and to knot within the cavity.
- The required screw length is given by the plug length + fixture thickness + 1 x screw diameter.
- Suitable for wood and chipboard screws, as well as stud screws.
- In the case of board building materials, the threadless part of the screw must not be longer than the fixture, and the UX with rim is to be used.
- The edge distance must be at least one plug length.

Installation UX

Universal plug UX Green

The nylon plug for all building materials

Curtain rails

Shelves

6

Applications

- Pictures
- Lighting
- Skirting
- Light cabinets
- Towel rails
- Mirror cabinets
- Curtain rails
- Wash basin fixings
- TV consoles
- Plumbing and heating fixings

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- Just as effective, secure and durable as regular UX plugs.
- The universal operating principle (knotting or expanding) allows for use in all solid,

hollow and board building materials. Thus the UX Green is the correct choice for unknown base materials.

- Plug collar for anti-slip safety and saw tooth sides as turning lock ensure the highest installation safety.

Certificates

Building materials

- Concrete
- Gypsum plasterboard and gypsum fibreboards
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone
- Aerated concrete
- Chipboard
- Solid panel made from gypsum
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The Universal plug UX with rim is suitable for pre-positioned installation; the UX without rim is suitable for push-through installation.
- When screwing in the screw, the UX GREEN expands in solid building materials and knots itself into cavities.
- Suitable for wood and chipboard screws, as well as stud screws.
- The required screw length is given by: the plug length + fixture thickness + 1 x screw diameter.
- In the case of board building materials, the threadless part of the screw must not be longer than the fixture.
- The edge distance must be at least one plug length.

Installation UX Green

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

Expansion plug SX

The powerful nylon plug with 4-way expansion

Wall consoles

Curtain rails

6

Applications

- Lighting
- Wardrobes
- Motion detectors
- Skirting
- Light shelves
- Mirror cabinets
- Letter boxes
- TV consoles
- Trellis
- Folding shutters
- Bath and toilet installations

Certificates

Advantages

- The 4-way expansion provides the optimum force distribution in the material, and offers high load-bearing capacities in solid and hollow building materials.
- The expansion-free plug neck prevents the creation of expansion forces on the material surface whilst screwing in the screw. This helps to prevent damage to tiles and plaster.

- The pronounced rim prevents the plug from slipping into the drill hole, thus allowing for a simple installation.
- The greater anchorage depth of the SX 6x50, 8x65 and 10x80 means that the plug is especially suited to fixings in hollow building materials, aerated concrete and to bridge plaster.

Building materials

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone with dense structure
- Aerated concrete
- Solid panel made from gypsum
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The SX is suitable for pre-positioned and push-through installation.
- When turning in the screw, the SX expands in four directions, thus providing a secure anchoring in the building material.
- The required screw length is given by: Plug length + fixture thickness + 1 x screw diameter.
- Suitable for wood, chipboard and spacing screws.

- Letter boxes
- TV consoles
- Trellis
- Folding shutters
- Bath and toilet installations

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- Just as effective, secure and durable as regular SX plugs.
- The powerful 4-way expansion provides optimum force transmission in the building material, thus enabling high load values and security.
- The anti-rotation lock prevents the plug from spinning in the drill hole.
- The expansion-free plug neck prevents the creation of expansion forces on the material whilst screwing in the screw. This helps to prevent damage to tiles and plaster.
- Fast and easy push-through installation reduces installation time.

Certificates

Building materials

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone with dense structure
- Aerated concrete
- Solid panel made from gypsum
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The SX GREEN is suitable for pre-positioned and push-through installation.
- When screwing in the screw, the SX GREEN expands in four directions, thus providing a secure anchoring in the building material.
- The required screw length is given by the plug length + fixture thickness + 1 x screw diameter.
- Suitable for wood, chipboard and spacing screws.

Installation SX Green

Expansion plug S

The installation-friendly nylon plug with 2-way expansion

Small shelves

Signs

6

Applications

- Pictures
- Lighting
- Skirting
- Light shelves
- Mirror cabinets
- Letter boxes
- Motion detectors
- Information boards
- Curtain rails
- Electrical installations

Advantages

- The rimless plug sleeve allows for the plug to be set as deep as required below the plaster to the bearing substrate to achieve the maximum load-bearing capacity.
- As the plug only expands in two directions, it is possible to direct the expansion forces so that they run parallel to the edge of the building material by turning

the plug. This allows for smaller edge distances.

- The slimline plug geometry makes it easy to push the plug into the drill hole. For a fast and simple installation.
- The anti-rotation lock prevents the plug rotating in the drill hole, thus guaranteeing a high level of installation safety.

Certificates

Building materials

- Concrete
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The expansion plug S is suitable for pre-positioned and push-through installation.
- When turning in the screw, the expansion plug S expands in two directions, thus providing a secure anchoring in the building material.
- The required screw length is given by the plug length + plaster and/or insulation material thickness + fixture thickness + 1 x screw diameter.
- Suitable for wood and chipboard screws.
- The edge distance must be at least one plug length.
- For installations close to the edge, turn the plug so that the expansion force acts parallel to the edge.

³⁾ Due to that the failure of the substrate varies too much no reproducible values can be given.

Threaded rod plug RodForce FGD

The economical hammerset plug - easy and quick fixing of threaded rods

Suspended ceilings

Single pipe suspension

6

Applications

- Suspension for individual pipes
- Plumbing and heating fixings
- Cable and pipe clips
- Suspended ceilings
- Ceiling lights
- Consoles
- Mounting rails

Advantages

- The innovative plug geometry allows quick and easy installation of the threaded rod with a few hammer blows.
- The short plug length prevents reinforcement hits and guarantees a secure utilization in reinforced concrete.
- The teeth inside the plug allow standard, metric threads to be held: This saves a large assortment of stud screws.
- Installation without special tools: The only thing needed to set the plug is a hammer.

- Visible edge of the plug serves as visual setting check and guarantees correct setting.
- The visible edge of the plug serves as visual setting check and guarantees correct setting.
- Easy to check and adjust: To check the setting depth, the closed plug tip is used as a stop point. This predetermined break point also allows the threaded rod to be hammered-in deeper.

Building materials

- Concrete
- Solid sand-lime brick
- Solid brick

Functioning

- When hammering-in the threaded rod, the plug expands in four directions as a result of the conical inner geometry.
- The plug is set using pre-positioned installation and this is possible in two different ways: Pre-installation of the threaded rods in the plug with both being hammered into the wall together or pre-inserting of the RodForce into the drill hole followed by hammering-in of the threaded rod.
- The teeth inside the plug mechanically interlock the metric thread securely with the threaded rod.
- The unique elements on the outside of the plug brace against the wall of the drill hole.

Metal expansion anchor FMD

The metal anchor for wood and chipboard screws

Pipes

Gas meters

6

Applications

- Gas pipes
- Water pipes
- Cable and pipe clips

Advantages

- The metal expansion anchor FMD is especially suited to applications in installation technology.
- The external teeth expand in the building material, thus ensuring a high load-bearing capacity.

- The ribbed internal geometry of the FMD is suitable for wood and chipboard screws, and makes it possible to guide the screw securely. This offers increased installation safety, and enables a broad range of applications.

Building materials

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone with dense structure
- Aerated concrete
- Solid brick made from lightweight concrete
- Solid panel made from gypsum

Functioning

- The FMD is suitable for pre-positioned installation.
- Inserting the screw causes the FMD to expand, and the metal teeth fix the anchor securely in the building material.
- The required (stud) screw length is given by: Anchor length + plaster and/or insulation layer thickness + fixture thickness or installation spacing + 1 x screw diameter.
- Suitable for wood and chipboard screws.
- The drill diameter is relative to the compressive strength of the building material. The higher the compressive strength, the greater the drill diameter. The 6x32 and 8x38 sizes can be hammered directly into low-strength aerated concrete without the need for pre-drilling.

Installation FMD

Technical data

Metal expansion anchor FMD

FMD

Item	Item No.	Drill hole diameter d_0 [mm]	Min. drill hole depth h_1 [mm]	Anchor length l [mm]	Screw diameter d_s [mm]	Sales unit [pcs]
FMD 6 x 32	061224 ¹⁾	6 - 7	38	32	5 - 6	100
FMD 8 x 38	061225 ¹⁾	10 - 12	46	38	6 - 8	100

²⁾ Valid for tensile load, shear load and oblique load under any angle.

Expansion plug M-S

The expansion plug for metric screws and threaded bolts

Downpipes

Folding shutters

6

Applications

- Handles
- Folding shutters
- Trellis
- Downpipes
- Stand-off installation
- Window fittings
- Gratings

Advantages

- The internal geometry of the M-S allows for the use of standard metric screws or threaded rods for the ideal adaptation to suit the intended use.
- The rimless plug sleeve allows for the plug to be set as deep as required below the plaster to the bearing substrate to achieve the maximum load-bearing capacity.
- As the plug only expands in two directions, it is possible to direct the expansion forces so that they run parallel to the edge of the building material by turning the plug. This allows for smaller edge distances.
- The slimline plug geometry makes it easy to push the plug into the drill hole, for a fast and simple installation.

Certificates

Building materials

- Concrete
- Cavity floor slabs made from bricks and concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick made from lightweight concrete
- Solid brick
- Solid panel made from gypsum
- Vertically perforated brick
- Aerated concrete

Functioning

- The M-S is suitable for pre-positioned and push-through installation.
- When turning in the screw, the M-S expands in two directions, thus providing a secure anchoring in the building material.
- The required screw length is given by: Plug length + plaster and/or insulation layer thickness + fixture thickness + 1 x screw diameter.
- Suitable for metric screws and threaded bolts.
- Chamfer the thread to make it easier to screw in screws and threaded rods.

Installation M-S

Anchor M

The powerful nylon expansion anchor with brass cone for metric threads

6

Plant construction

Protective grilles

Applications

- Machines
- Curbs
- Control boxes

Advantages

- The anchor's large external diameter helps to achieve a large applied load in the building material. This allows for maximum load-bearing capacity.
- The anchor's high expansion makes it insensitive to building material tolerances. This guarantees a simple and secure

installation.

- The internal thread allows for the use of standard metric screws or threaded rods, and for surface flush removal and reuse of the fixing point. This provides great flexibility.

Certificates

Building materials

- Concrete
- Natural stone with dense structure
- Solid brick
- Solid sand-lime brick
- Solid brick made from lightweight concrete
- Aerated concrete
- Solid panel made from gypsum
- Hollow blocks made from lightweight concrete

Functioning

- The M anchor is suitable for pre-positioned installation.
- Turning in the screw causes the internal brass cone to expand the M anchor, thus reliably anchoring it in the building material.
- The required screw length is given by anchor length + fixture thickness.
- Suitable for metric screws and threaded bolts.

Installation M

6

Technical data

Brass fixing MS

The brass expansion fixing with metric thread

6

Protective wall panels

Small shelves

Applications

- Cellar shelves
- Substructures made of wood and metal
- Boilers
- Aggregates
- Control boxes
- Curtain rails

Advantages

- The compact design of the brass fixing reduces the amount of drilling required, helping to ensure a fast installation.
- The special surface structure of the MS prevents the fixing from rotating in the drill hole. This provides increased instal-

lation safety.

- The internal thread allows for the use of standard metric screws or threaded rods, and for surface flush removal and reuse of the fixing point. This provides great flexibility.

Building materials

- Concrete
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick

Functioning

- The MS brass fixing is suitable for pre-positioned installation.
- Turning in the metric screw causes the front part of the brass fixing to expand, thus securely anchoring it in the substrate.
- Calculating screw length for flush fixing installation: Fixing length + fixture thickness = min. screw length.
- Suitable for metric screws and threaded bolts.

Installation MS

6

Aircrete anchor GB

The special plug for different fixings in aerated concrete

Pipes

Trellis

6

Applications

- Light cable trays
- Pipelines
- Guard rails
- Façade and roof constructions made of wood and metal
- Light canopy brackets
- Letter boxes
- Trellis

Certificates

Advantages

- The general building approval guarantees approved safety for use in safety-relevant applications.
- The spiral-shaped outer ribs cut a positive fit in the soft building material, thus ensuring the best pressure distribution and load-bearing capacity.
- Can be applied with a hammer - there

Building materials

Approved for (GB 10) resp. suitable for (GB 8 and GB 14):

- Aerated concrete \geq AAC 2
- Also suitable for:
- Aerated concrete and ceiling panels of compressive strength \geq 3,3

is no need for special tools, thus saving time and money for the installation.

- The GB can also be used safely outside (e.g. in façade installation) when combined with the approved fischer safety screw in A4.

Functioning

- The GB is suitable for pre-positioned installation.
- The spiral-shaped outer ribs ensure a positive fit connection between the building material and anchor.
- The required screw length is given by: Anchor length + fixture thickness + 1 x screw diameter.
- The GB 10 must be used with fischer safety screws to fulfil the approval and to achieve the maximum load-bearing capacity.
- Use rotary drilling to create the drill hole
- Can be used in unplastered aerated concrete

Installation GB

Loads

Aircrete anchor GB					
Permissible or recommended loads ^{1) 2)} for a single anchor in aerated concrete.					
Type		GB 10 ²⁾	GB 8 ³⁾	GB 10 ³⁾	GB 14 ³⁾
Screw diameter		[mm] 7	5	6	10
Minimum spacing ⁴⁾	s _{min}	[mm] 100	150 (100) ⁶⁾	150 (100) ⁶⁾	300 (200) ⁶⁾
Minimum edge distance ⁵⁾	c _{min}	[mm] 100	100 (75) ⁶⁾	100 (75) ⁶⁾	200 (150) ⁶⁾
Minimum member thickness	h _{min}	[mm] 120	75	120	200
Nominal embedment depth	h _{nom}	[mm] 55	50	55	75
Load in the respective base material		Permissible loads F _{perm} ⁷⁾	Recommended loads F _{rec} ⁸⁾		
AAC 2	ρ ≥ 0.35 [kg/dm ³]	[kN] 0.21	0.18	0.20	0.40
AAC 4	ρ ≥ 0.50 [kg/dm ³]	[kN] 0.54 (0.71) ⁹⁾	0.40	0.50	0.90

¹⁾ Required safety factors are considered. Valid for tension load, shear load and oblique load under any angle.

²⁾ In case of the design of the GB 10 for tension, shear and bending the complete approval Z-21.2-123 has to be considered.

³⁾ Not part of the approval.

⁴⁾ Minimum possible axial spacing while reducing the permissible load.

⁵⁾ Minimum possible edge distance.

⁶⁾ Values in brackets apply to AAC 2.

⁷⁾ Value only applies in connection with GB 10 and fischer safety screw according to approval Z-21.2-123.

⁸⁾ Values are valid in combination with wood screws acc. DIN 571.

⁹⁾ The values in brackets are decisive for member thickness ≥ 150 mm.

Aircrete anchor GB Green

Secure in aerated concrete

Radiators

Trellis

6

Applications

- Pipelines
- Letter boxes
- Trellis
- Handles
- Gratings
- Electrical installations

Certificates

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- The spiral-shaped outer ribs cut a positive fit in the soft building material, thus

ensuring best pressure distribution and load-bearing capacity.

- Can be applied with a hammer – there is no need for special tools, thus saving time and money for the installation.

Building materials

- Aerated concrete \geq AAC 2
- Aerated concrete and ceiling panels of compressive strength \geq 3.3

Functioning

- The aircrete anchor GB GREEN is suitable for pre-positioned installation.
- The spiral-shaped outer ribs cut a positive fit into the soft building material when knocked in, thus ensuring optimal pressure distribution and load-bearing capacity.
- The required screw length is given by the plug length + fixture thickness + 1 x screw diameter.
- Rotary drilling of the hole is required.
- Can be used in unplastered aerated concrete.

Installation GB Green

Loads

Aircrete anchor GB Green

Recommended loads¹⁾ for a single anchor in aerated concrete.

Load values apply when using fischer safety screws²⁾ according to selection table.

Type			GB Green 8	GB Green 10
Diameter fischer safety screw		[mm]	5	7
Minimum spacing ³⁾	s_{min}	[mm]	150 (100) ⁵⁾	100
Minimum edge distance ⁴⁾	c_{min}	[mm]	100 (75) ⁵⁾	100
Minimum member thickness	h_{min}	[mm]	75	120
Nominal embedment depth	h_{nom}	[mm]	50	55
Recommended load (F_{rec}) in the respective base material				
AAC 2	$\rho \geq 0,35$ [kg/dm ³]	[kN]	0.18	0.21
AAC 4	$\rho \geq 0,50$ [kg/dm ³]	[kN]	0.40	0.54 (0,71) ⁶⁾

¹⁾ Required safety factors are considered. Valid for tension load, shear load and oblique load under any angle.

²⁾ Galvanised steel (gvz) and stainless steel (R).

³⁾ Minimum possible axial spacing while reducing the permissible load.

⁴⁾ Minimum possible edge distance.

⁵⁾ Values in brackets apply to AAC 2.

⁶⁾ The values in brackets are decisive for member thickness ≥ 150 mm.

Turbo aircrete anchor FTP K

The versatile nylon anchor for aerated concrete

External lighting

Radiators

6

Applications

- Pictures
- Lighting
- Shelves
- Mirror cabinets
- Letter boxes
- Signs
- Motion detectors
- Cable and pipe clips
- Stand-off installations

Certificates

Advantages

- The FTP K is suitable for both wood screws and metric screws, and thus offers flexibility in screw choice.
- The spiral-shaped outer thread taps itself into the soft aerated concrete with a positive fit, thus ensuring a secure hold.
- Setting with the FTP EK setting tool requires only a small amount of force. For a convenient installation.
- The special geometry allows for an almost expansion-force-free anchoring. This allows for small edge and spacing distances, and avoids splitting in the case of plastered surfaces.

Building materials

- Aerated concrete
- Solid panel made from gypsum

Functioning

- The FTP K is suitable for pre-positioned installation.
- Set the FTP K with setting tool FTP EK. The aircrete anchor taps itself into the aerated concrete with a positive fit during the installation process.
- Suitable for wood and metric screws with diameter 4 to 10 mm.

Installation FTP

Loads

Turbo aircrete anchor FTP K

Highest recommended loads¹⁾ for a single anchor in aerated concrete and gypsum blocks.
The given loads are valid for screws with the specified diameter.

Type		FTP K 4	FTP K 6	FTP K 8	FTP K 10	
Screw diameter	[mm]	4	5 - 6	8	8 - 10	
Min. edge distance c_{min}	[mm]	100	100	150	200	
Recommended loads in the respective base material F_{rec} ²⁾						
Aerated concrete	ACC 2 ($\geq 2,5 \text{ N/mm}^2$)	[kN]	0.15	0.20	0.30	0.40
Aerated concrete	ACC 4 ($\geq 5,0 \text{ N/mm}^2$)	[kN]	0.25	0.30	0.40	0.50
Gypsum block		[kN]	-	-	0.29	0.54

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

Turbo aircrete anchor FTP M

The metal anchor for metric screws for aerated concrete

Shelves

Wall consoles

6

Applications

- Pictures
- Lighting
- Shelves
- Mirror cabinets
- Curtain rails
- Cable and pipe clips
- Stand-off installations
- Radiators
- TV consoles

Advantages

- The Allen key chuck makes it possible to set the FTP M without the need for a special setting tool. This allows for a simple installation.
- The FTP M achieves a very high load-bearing capacity in aerated concrete for increased safety.
- The spiral-shaped outer thread taps itself

into the aerated concrete with a positive fit. This means that it can be set without the need for much force.

- The special geometry allows for an almost expansion-force-free anchoring. This allows for small edge and spacing distances, and avoids splitting in the case of plastered surfaces.

Building materials

- Aerated concrete
- Solid panel made from gypsum

Functionality

- The FTP M is suitable for pre-positioned installation.
- The aircrete anchor taps itself into the aircrete with a positive fit during the installation process.
- Suitable for metric screws with diameter 6 to 10 mm.
- For installation with a hexagon socket: Size of the hexagon socket corresponds to screw diameter, e.g. FTP M6 is installed with hexagon socket size 6.
- For installation with cordless screwdriver: use a low torque and use the correct 6-kt bit FTP EM.

Installation FTP

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

Brass fixing PA 4

The brass fixing for thin board building materials and solid building materials

6

Furniture fittings

Furniture hinges

Applications

- Handles
- Angle brackets
- Furniture fittings
- Lamps

Advantages

- The short brass fixing PA 4 only requires a very low anchorage depth and is therefore the solution for thin board building materials.
- The special surface structure of the PA 4 prevents the fixing from rotating in the

drill hole. This provides increased installation safety.

- The internal thread allows for the use of standard metric screws and enables the ideal adaptation to suit the intended use.

Building materials

- Wooden board building materials
- Plastic boards
- Concrete
- Solid brick
- Solid sand-lime brick
- Natural stone with dense structure

Functioning

- The PA 4 is suitable for pre-positioned installation.
- Turning in the metric screw causes the front part of the brass fixing to expand, thus securely anchoring it in the substrate.
- Calculating screw length for flush fixing installation: Fixing length + fixture thickness = min. screw length

Installation PA 4

6

Technical data

Brass fixing PA 4

PA4

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

Balcony cladding fixing P 9 K

For the rear-ventilated stand-off fastening of balcony cladding to hollow profiles

Balcony cladding

6

Applications

- Balcony cladding
- Fittings
- Electrical switches
- Lamps
- Motion detectors

Advantages

- The wide collar of the P9K plug fixes the balcony cladding to the hollow profile with a spacing. This avoids the formation of rot.
- The expansion within the railing post means that no second drilling on the opposite side of the post is necessary. This allows for a practically invisible fixing of the balcony cladding.
- The material quality of the P9K creates an elastic yet load-bearing connection. This allows for the absorption of thermal stresses, thus increasing the lifespan of the cladding.
- The short expansion element means that the balcony cladding fixing only requires a very small cavity. It is therefore suitable for narrow hollow profiles.

Building materials

- For fixing onto hollow metal profiles

Functioning

- Turning in the screw causes the plug to expand in the hollow profile, thus ensuring a load-bearing connection.
- The wide collar prevents direct contact between the fixture and the hollow profile.

Installation P 9 K

6

Stair-tread fixing TB / TBB

To fix wooden step treads in concrete and steel sub-structures

6

Stair treads on steel stair stringers

Stair treads on concrete stair stringers

Applications

- Wooden step treads

Advantages

- The elastic shaft geometry allows for the absorption of vibrations, prevents creaking, and thus increases comfort.

- The stair-tread fixing for steel sub-structures (TB) only requires a very small cavity due to the short expansion element. Thus it is suitable even for narrow steel profiles.

Building materials

TB for fixing in:

- Hollow steel profiles

TBB for fixing in:

- Concrete
- Solid building materials

Functioning

- The plastic expansion plugs are suitable for anchoring wooden step treads and wooden boards >30 mm to steel profiles (TB) or in solid building materials (TBB).
- The ideal retention forces are only achieved when using cold wood glue for the fixing in wooden step treads.
- The plastic washers included with the TBB allow you to level out any unevenness in the substrate.

Installation TB

Repair pad FixIt

To repair over-sized or damaged drill holes

6

Repairing damaged drill holes

Repairing damaged drill holes

Applications

- To repair over-sized or damaged drill holes for use with plastic plugs

Advantages

- Using FixIt means that you can avoid having to drill another hole, and makes it possible to reuse a pre-existing drill hole.
- The repair pad FixIt can be used as a single layer or as multiple layers, and thus can be flexibly adapted to suit various drill

hole sizes and shapes.

- The pad, which is covered with a special mortar, hardens after only approx. three minutes in the drill hole. This allows for a fast installation of the fixture.

Building materials

- Concrete
- Cavity floor slabs made from bricks and concrete
- Vertically perforated brick made from lightweight concrete
- Solid sand-lime brick
- Natural stone with dense structure
- Aerated concrete
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The pad, which is covered with a special mortar, hardens in the drill hole, thus anchoring the plug securely in the damaged or over-sized drill hole.
- Wet the pad with water, wrap it around the plug and push it into the damaged drill hole.
- After about three minutes the special pad will harden and the fixture can then be attached.
- Use several pads for larger tolerances.
- The curing time for the first pad is approx. three minutes. Add an additional minute for each additional pad used.

Doorstop TS

The installation-friendly doorstop

Doorstop

6

Applications

- Doorstop with flexible positioning

Characteristics

Advantages

- The extended plug shaft makes it possible to attach the doorstop directly, thus simplifying installation.
- The invisible fixing ensures visual appeal.
- The TS contains all the components

Building materials

- Concrete
- Floor screed

required for installation and is therefore a convenient complete solution.

- The doorstop is available in a range of colours to suit every floor covering and individual design wishes.

Functioning

- The doorstop TS is suitable for pre-positioned installation.
- When turning in the screw, the plug expands and anchors itself in the building material.
- The plug must be pushed into the drill hole up to the point where the plug shaft thickens.
- It can be removed by removing the doorstop, unscrewing the screw, and pulling out the plug.

Nylon toggle DuoTec

Easy to install nylon toggle for high loads in all panel building materials

Kitchen hanging cabinets

Shelves

7

Applications

- Kitchen hanging cabinets
- Living room cabinets
- Shelves
- Wardrobes
- Handrails
- Pictures
- Mirrors
- Lamps
- Heavy hanging baskets

Advantages

- Flexible screw mount allows for the use of screws and hooks with different thread shapes.
- Glass fibre-reinforced plastics and a metal skeleton insert (fischer DuoTec 12) allow the toggle to handle heavy tensile and transverse loads in all panel building materials.
- Soft grey nylon contact surface distributes the load over the panel surface, thereby minimising weakening of the

- supporting building material.
- Standard drill hole diameters and short tilting element for easy installation in narrow cavities, including cavities with insulation.
- White flush sleeve with snap function allows the plug to be pre-installed quickly and securely in the drill hole.
- With scale on the grip strap (fischer DuoTec 12) for determining the required screw length (scale value + 20 mm).

Certificates

Building materials

Suitable for:

- Gypsum plasterboard
- Gypsum fibreboard
- Wooden panels, such as OSB boards, chipboard, MDF sheets
- Steel plates
- Plastic boards
- Hollow blocks made from concrete

Also functioning in:

- Solid materials, such as concrete and wood

Functioning

- The fischer DuoTec is designed for pre-positioned installation.
- Simple installation with a standard diameter 10 or 12 mm drill bit.
- The short toggle element makes it suitable for narrow and even with mineral wool insulated cavities. Note the length of the toggle element!
- Functions like an expansion plug in solid building materials such as concrete or wood. Note, not with metric screws!
- Flexible screw insert allows for the use of wood, chipboard and metric screws and hooks.

¹⁾ Required safety factors are considered.

²⁾ The recommended loads are reference values and depending to the building material and the workmanship. The values are only valid for the given screw diameter.

³⁾ Valid for tensile load, shear load and oblique load under any angle.

⁴⁾ Bending of the hook is decisive. Only for tension load.

Metal cavity fixing HM

The versatile metal cavity fixing with metric screws

Curtain rails

Shelves

7

Applications

- Pictures
- Lighting
- Light shelves
- Towel rails
- Mirror cabinets
- Curtain rails
- Sub-structures

Advantages

- Due to the extensive range, the HM is suitable for board building materials with a thickness of 3-50 mm and thus suitable for a number of different applications.
- The metric internal thread allows the attachment to be removed and refitted several times, thus offering the best possible flexibility.

- The HM's expanding arms ensure a large supporting surface, thus allowing a high load-bearing capacity.
- The claws around the edge of the fixing penetrate the board building material, preventing the fixing from rotating, thus ensuring a secure installation.

Building materials

- Gypsum plasterboard and gypsum fibreboards
- Cavity floor slabs
- Light building boards made of wood wool
- Chipboard
- Plywood boards

Functioning

- The metal cavity fixing HM is suitable for pre-positioned installation.
- The fixing should be selected based on the thickness of the board building material, to allow the very best expansion in the cavity.
- During installation, the expanding arms swing open and press onto the reverse side of the board.
- The HM can be installed using installation pliers. If using a battery operated screwdriver or screwdriver for installation, the pre-assembled screws must be removed first. When screwing in and expanding the fixing, the attachment, or a max. 6 mm plate, needs to be used as a turning stop.

Spring-toggle KD, KDH, KM

The cavity fixing for different board thicknesses and large usage lengths

Ceiling lamps

Wash basins

7

Applications

- Pictures
- Lighting
- Light shelves
- Towel rails
- Mirror cabinets
- Light cabinets
- Wash basins and urinals (KM 10)
- Cable and pipe clips

Advantages

- Universal fixing for fastenings in a wide range of drywall and hollow wall materials.
- When the metal crosspiece is pushed through the drill hole, pull it firmly against the inner wall cavity by tugging the plastic pull ring on the outer wall.
- Afterwards cut the plastic legs off and fasten the fixture with e.g. a screw or screw in a hook or an eyebolt according to your demands.
- Suitable for pre-positioned installation.

Building materials

- Gypsum plasterboard and gypsum fibreboards
- Cavity floor slabs made from bricks and concrete
- Chipboard
- Plywood boards

Functioning

- The gravity and spring toggle are suitable for pre-positioned installation.
- When placed in the drill hole, the bearing elements of the gravity and spring toggles independently swing open behind the board.
- The KM 10 is specially suited to fixing wash basins and urinals into installation and cavity walls.
- No special installation tool required. For a fast and convenient installation.

Board fixing PD

The expansion plug for fixings in gypsum plasterboard, gypsum fibreboard and wooden panels

Towel rails

Small shelves

7 Applications

- Pictures
- Lighting
- Light shelves
- Towel rails
- Mirror cabinets
- Curtain rails

Advantages

- The operating principle of the fixing allows for use in various board thicknesses, including in low cavity depths. This provides great flexibility.
- The special fixing geometry with a nylon cone ensures a high tightening torque that can be identified immediately. This offers a high level of installation safety.

- The longitudinal ribs prevent the fixing from rotating in the drill hole, thus allowing for a reliable installation.
- The board fixing PD can be used with the most wide-ranging screws, hooks and eye screws. This allows for a broad range of applications.

Certificates

Building materials

- Gypsum plasterboard and gypsum fibreboards
- Wooden boards
- MDF boards
- Multiplex boards
- OSB boards
- Plywood boards
- Chipboard
- Wood core plywood boards

Functioning

- The board fixing PD is suitable for pre-positioned installation.
- Use rotary drilling to create the drill hole.
- When the screw is tightened, the plastic cone is pulled into the sleeve and expands the fixing.
- Use full-thread screws, or alternatively, the part of the screw without thread may not be longer than the thickness of the item being attached.
- Do not use screws with double-start threads.

Installation PD

Plasterboard fixing DuoBlade

The self-drilling plasterboard plug for fast and easy installation

Smoke detectors

Mirrors

7

Applications

- Smoke detectors
- Mirrors
- Curtain rods
- Blinds
- Lamps
- Pictures

Advantages

- An innovative product of the fischer DuoLine with intelligent combinations for more power and more intelligence.
- The self-drilling fischer DUOBLADE allows fast and easy installation in gypsum plasterboard and gypsum fibreboard.
- The black metal tip guarantees simple and safe installation.
- High torque when anchor is installed for the feelgood-factor and an optimum feeling when setting.
- PZ 2 drive - same drive for plug and screw.

Certificates

Building materials

- Gypsum plasterboard, single and double-planked
- Gypsum fibreboard
- Lightweight cement boards

Functioning

- The fischer DuoBlade is suitable for pre-positioned installation.
- The metal tip for better heat-resistant and cutting characteristics. Especially in double-layered plasterboard.
- The fischer DuoBlade can be used with wood, metal and chipboard screws of Ø4.0 to Ø5.0 mm.
- In gypsum fibreboard, pre-drilling with a drill Ø 8mm is recommended.

Installation DuoBlade

Plasterboard fixing GK

The fastest installation in gypsum plasterboard

Wall lamps

Pictures

Applications

- Pictures
- Lighting
- Electrical installations
- Fitting accessories
- Series installations

Advantages

- The included setting tool combines the drilling and fixing setting functions. It thus allows for a fast and simple installation.
- The sharp, self-tapping thread of the GK enables a secure, positive fit fixing. This achieves a high load-bearing capacity.
- The short fixing length means that only a small amount of space is required behind the board. As a result, the GK can also be used in the case of unknown board

thickness and cavity depth.

- The cross-drive recess in the head of the fixing means that the GK can also be screwed out like a screw without a setting tool.
- The GK can be used with the most wide-ranging screws, hooks and eye screws. This allows for a broad range of applications.

Certificates

Building materials

- Gypsum plasterboard, single and double-planked

Functioning

- The gypsum plasterboard fixing GK is suitable for pre-positioned installation.
- The GK is screwed flush into the gypsum plasterboard using the setting tool provided. Overtightening the fixing should be avoided. Therefore, the installation torque should be limited when using a battery operated screwdriver.
- Adapted for wood, self-tapping and chip-board screws of 4.0 to 5.0 mm diameter.
- For board thicknesses greater than 15 mm, drill a hole first by using the setting tool.
- Not suitable for gypsum fibreboard and tiled plasterboard.

Gypsum plasterboard	12,5 mm	[kN] 0.08
Gypsum plasterboard	2 x 12,5 mm	[kN] 0.11

¹⁾ Required safety factors are considered. The given loads are valid for chipboard screws with the specified diameters.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

Plasterboard fixing GK Green

The fastest installation in gypsum plasterboard

Wall lamps

Pictures

7

Applications

- Pictures
- Lighting
- Electrical installations
- Fitting accessories
- Series installations

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- Just as effective, secure and durable as regular GK plugs.
- The included setting tool combine the functions of drilling and setting fixings for direct and easy installation.
- Sharp, self-tapping thread for a positive-fit connection with a high load-bearing capacity.
- The cross-drive recess in the head of the fixing means that the GK Green can also easily be screwed out like a screw.
- The GK Green can be used with various screws, hooks and eye screws, making it very versatile in its applications.

Certificates

Building materials

- Gypsum plasterboard, single and double-planked

Functioning

- The gypsum plasterboard fixing GK Green is suitable for pre-positioned installation.
- The GK Green is screwed flush into the gypsum plasterboard using the setting tool provided. Avoid manual and machine-aided overtightening.
- For board thicknesses greater than 15 mm, drill a hole first by using the setting tool.
- Adapted for wood, sheet metal and chipboard screws with a diameter of 4.0 to 5.0 mm.
- Not suitable for gypsum fibreboard and tiled plasterboard.

Installation GK Green

Plasterboard fixing metal GKM

The self-tapping metal fixing for gypsum plasterboard and gypsum fibreboard

Wall lamps

Speaker cabinets

Applications

- Pictures
- Lighting
- Electrical installations
- Fitting accessories

Advantages

- Due to its material properties, the GKM can be used in gypsum plasterboard and gypsum fibreboard, and can be used with the most wide-ranging screws, hooks and eye screws. This allows for a broad range of applications.
- The sharp, self-tapping thread enables a secure, positive fit fixing. This achieves a high load-bearing capacity.

Building materials

- Gypsum fibreboard
- Gypsum plasterboard

- The cross-drive recess means that a standard screwdriver or bit can be used. No special setting tool is required.
- The short fixing length means that only a small amount of space is required behind the board. As a result, the GKM can also be used in the case of unknown board thickness and cavity depth.

Functioning

- The GKM is suitable for pre-positioned installation.
- The self-tapping metal fixing GKM taps itself into the plasterboard with a positive fit.
- Flush installation in the board building material. Overtightening the fixing should be avoided. Therefore, the installation torque should be limited when using a battery operated screwdriver.
- Adapted for wood, self-tapping and chip-board screws of 4.0 to 5.0 mm diameter.
- Pre-drill with a Ø 8 mm drill bit when using gypsum fibreboard and double-planked gypsum plasterboard.
- Not suitable for tiled plasterboard.

Locking clip SCN

The easy-to-install and secure locking clip for fixing of pipes

Plastic pipes

Plastic pipes

Applications

8

- Plastic, empty pipes
- Flexible and rigid electric tubes
- Aluminium-, copper- and steel pipes

Advantages

- When pressing, the locking clip SCN automatically embraces and locks the pipe, thus enabling convenient installation.
- The mechanical lock provides a secure and reopenable fixing.
- The integrated slotted hole allows for an easy and adjustable installation.
- The double-sided couplings allow several

- clips to be coupled together. This saves installation time and money.
- Flexible mounting with plugs and screws or with 11 mm C-profile rails.
- The durable nylon material is halogen- and silicone-free, allows year-round use even under frost and thus ensures a high level of safety.

Characteristics

Building materials

When using 2-component DuoPower plug:

- Concrete
- Solid brick
- Solid sand-lime brick
- Aerated concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Plasterboard
- Gypsum plasterboard and gypsum fibreboards
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete or similar
- Natural stone
- Chipboard
- Solid panel made from gypsum
- Solid brick made from lightweight concrete

Functioning

- The locking clip SCN is fixed in pre-positioned installation with a suitable plug and screw or in 11 mm C-profile rails.
- Due to the mechanical locking, the pipes are securely fixed with the clip.
- Installation temperature -20 °C + 60 °C
- Temperature resistance when installed -40 °C to +80 °C.

Versions

- Nylon

Pipe clip RC

The convenient pipe fixing

Fixing plastic insulating conduits

Fixing plastic insulating conduits

8

Applications

- Flexible and rigid plastic insulating pipes

Advantages

- The pipe clip RC can be used with pre-installed clip fixing SD, with Hammerfix N 6 or in 11 mm C-shaped profile-rails, and thus allows for a flexible and cost-effective installation.
- The 6 mm-long hole allows for the optimal alignment of the pipe fixing and

- ensures a more user-friendly installation.
- Two additional pipe clips can be added to the sides of a pre-fixed pipe clip. This saves assembly time and materials.
- The long-lasting nylon material is halogen- and silicone-free. It can be used all year round, including during a frost. This ensures a high level of safety.

Characteristics

Building materials

When using ClipFix SD:

- Concrete
- Solid pumice block
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick

Functioning

- Plastic insulation pipes are laid into the pipe clip. The pre-tensioning of the pipe clip holds the pipes securely.
- The pipe clip RC is adapted to be fixed with either clip fixing SD or Hammerfix N 6.
- Manually place the ClipFix plus SD directly into the drill hole. No additional screws are needed.
- The Hammerfix N is expanded when the nail is driven in, and holds by friction in the drill hole.
- Temperature resistance once installed from -20 °C to +80 °C.

1) Does not include latching catches, therefore cannot be mounted side by side.

Pipe clip FC

The flexible pipe clip for various diameters

Cable fixing

Fixing plastic insulating conduits

Applications

- Electric cables
- Flexible and rigid plastic insulating pipes

Advantages

- The flexible pipe clip socket ensures a secure hold for various cable and pipe diameters, and reduces the number of products required.
- The pipe clip FC can be installed with both N 5 Hammerfixes and 11 mm-C-shaped profile-rails, and thus offers great

flexibility.

- Two additional pipe clips can be added to the sides of a pre-fixed clip clamp. This saves assembly time and materials.
- The long-lasting nylon material is halogen-free. It can be used all year round, including during a frost. This ensures a high level of safety.

Characteristics

Building materials

When using Hammerfix N:

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Building brick
- Natural stone
- Aerated concrete
- Solid panel made from gypsum
- Solid brick made from lightweight concrete

Functionality

- The clip clamp FC is adapted to suit the fixture using N5 Hammerfixes.
- The Hammerfix N is expanded when the nail is driven in, and holds by friction in the drill hole.
- The cables or pipes are then laid in the clip clamp FC. The pre-tensioning of the clip clamp holds the cables or pipes securely.
- Temperature resistance once installed from -40 °C to +80 °C.

Saddle clip SCH

The flexible cable clamp for various diameters

Fixing cable harnesses

Plastic conduits

Applications

8

- Electric cables
- Flexible and rigid plastic insulating pipes

Advantages

- With its elastic spring tabs, the saddle clip SCH can bear different cable diameters. This increases flexibility and reduces the number of products required.
- Additional clips can be added to the sides of a pre-fixed clip. This saves installation

time and materials.

- The long-lasting nylon material is halogen- and silicone-free. It can be used all year round, including during a frost. This ensures a high level of safety.

Characteristics

Building materials

When using Hammerfix N:

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Building brick
- Natural stone
- Aerated concrete
- Solid panel made from gypsum
- Solid brick made from lightweight concrete

Functionality

- The clamp SCH is adapted to suit the fixture using N 5 Hammerfixes.
- The Hammerfix N is expanded when the nail is driven in, and holds by friction in the drill hole.
- The cables or pipes are then laid in the clamp SCH and fixed by inserting the locking latch.
- The internal tabs adapt to fit various cable or pipe diameters.
- Temperature resistance once installed from -40 °C to +80 °C.

Fastening tie FF

Fixing tie for bundling and fixing of cables and pipes to the substrate

Electric cables

Plastic pipes

Applications

8

- Electric cables
- Flexible and rigid electric tubes
- Steel conduits

Characteristics

Advantages

- The socket of the FF fixing tie is fixed to the substrate with a screw or screw and plug.
- The fixing tie can be used to bundle and

- fix several cables or pipes.
- Adjustable diameter of the tie loop.
- The socket of the fixing tie can be adjusted through its slotted hole.

Building materials

When using 2-component DuoPower plug:

- Concrete
- Solid brick
- Solid sand-lime brick
- Aerated concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Plasterboard
- Gypsum plasterboard and gypsum fibreboards
- Hollow blocks made from lightweight concrete
- Cavity floor slabs made from bricks and concrete or similar
- Natural stone
- Chipboard
- Solid panel made from gypsum
- Solid brick made from lightweight concrete

Functioning

- The Socket of the fixing tie is fixed with the plug and screw suitable for the substrate.
- Recommended application temperature -20 °C to +60 °C.
- Temperature resistant when installed -40 °C to +80 °C.

ClipFix plus LS/ES/ZS

The user-friendly clip fixing for pipes and conduits

Cable fixing

Fixing flexible pipes

8 Applications

- Individual electric cables
- Cable bundles
- Flexible pipes
- Rigid plastic pipes

Advantages

- The complete element combines anchor, screw and clamp. This saves materials, allows for one-handed installation, and reduces assembly time.
- The slimline geometry of the fixing element only protrudes slightly, thus saving space.
- The three different sizes of each of the

cable strap LS, twin clamp ZS and single clamp ES cover a range of cable diameters, thus reducing storage.

- The long-lasting nylon material is flame resistant, halogen- and silicone-free, can be used all year round, including during a frost. This ensures a high level of safety.

Characteristics

Building materials

- Concrete
- Solid pumice block
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick

Functioning

- The clip fixing is set into the drill hole without the need for any additional screws and fixes the pipe directly to the base material.
- The clamping force of the locking catch allows the ClipFix to hold itself in the drill hole.
- Place the clasp of the cable strap LS into the drill hole so that it is level and the teeth grip.
- Recommended loads (required safety factor considered): cable strap LS up to 6 kg, twin clamp ZS and single clamp ES up to 11 kg.
- Temperature resistance once installed from -20 °C to +80 °C.
- Flammability material UL 94-V0.

ClipFix plus SD

The user-friendly clip fixing for cable ducts and cable clasps

Fixing cable ducts

Fixing cable harnesses

Applications

8

- Cable channels
- Cable clasps
- Installation base cable harness
- Flat building components

Advantages

- The ClipFix plus SD combines anchor and screw. This saves on materials and makes it easier to affix cable ducts that are difficult to access without the need for additional tools.
- The simple clip fixing reduces installation time.
- The extended shank of the FS plus SD 40

- allows bridging of non-bearing plaster layers, as well as the fixing of thicker attachments.
- The long-lasting nylon material is flame resistant, halogen- and silicone-free. It can be used all year round, including during a frost. This ensures a high level of safety.

Characteristics

Building materials

- Concrete
- Solid pumice block
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick

Functioning

- To fix, manually place the ClipFix plus SD directly into the drill hole. No additional screws are needed.
- The clamping force of the locking catch allows the ClipFix to hold itself in the drill hole.
- Recommended loads (required safety factor considered): clip fixing SD up to 11 kg.
- Temperature resistance once installed from -20 °C to +80 °C.
- Flammability material UL 94-V0.

Cable clasp KB

The flat cable clasp for space-saving cable fixing

Fixing cable harnesses

Fixing cable harnesses

8

Applications

- Several individual cables in a small installation space
- Multiple single cables in false ceilings

Characteristics

Advantages

- The flat design of the KB cable clasp allows for a space-saving cable fixing, and simplifies subsequent cable-laying.
- The combination of cable clasp KB and ClipFix SD allows for one-handed installation, thus enabling a flexible and

economic installation.

- The long-lasting nylon material is halogen- and silicone-free. It can be used all year round, including during a frost. This ensures a high level of safety.

Building materials

When using ClipFix SD:

- Concrete
- Solid pumice block
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick

Functionality

- The cable clasp KB is adapted to suit the fixture with clip fixing SD or Hammerfix N6.
- Place the ClipFix plus SD directly into the drill hole by hand. No additional screws are needed.
- The Hammerfix N is expanded when the nail is driven in, and holds by friction in the drill hole.
- After installation, the cables are pulled under the clasp. Additional cables can be easily laid after installation too.
- Temperature resistance once installed from -20 °C to +80 °C.

Cable harness SHA

The adaptable cable harness for fixing cable bundles

Fixing cable bundles

Fixing cable bundles

8

Applications

- Electric cables, loose and bundled

Advantages

- Simple bundling and economical laying of multiple electric cables.
- The seal of the cable harness SHA makes it easy to lay cables at a later date, thus ensuring high user-friendliness.
- Combining several SHA cable harnesses allows for a cost-effective fixing of cables

- to just one MS installation base.
- The MS installation base allows for various fixing options, and offers great flexibility for the installation.
- The long-lasting nylon material is halogen- and silicone-free, can be used all year round, including during a frost, and thus ensures a high level of safety.

Characteristics

Building materials

When using ClipFix SD:

- Concrete
- Solid pumice block
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick

Functioning

- Cable bundles can be laid in the cable harness SHA. The seal makes it easy to lay cables at a later date.
- The cable harness SHA can either be affixed with ClipFix plus, installation base MS or with plugs and screws.
- Several SHA cable harnesses can be combined below one another.
- The SHA cable harnesses can also be lined up adjacent to one another with the connection piece SHA KP.
- The maximum installation distance of 80 cm must not be exceeded.
- Temperature resistance once installed from -20 °C to +80 °C.

Multi cable support metal SHA M

Metal multi-cable support with high mechanical resistance and approval

Cable fixing to the ceiling

Cable fixing to the wall

Applications

8

- Cables with circuit integrity maintenance
- Installation of electrical cables above fire protection ceilings.

Advantages

- The fischer metal multi cable support SHA M has a high mechanical strength and thus offers a long service life and safety in the event of fire.
- It is approved as a cable-specific variant for circuit integrity maintenance of electric cable systems in accordance with DIN 4102 Part 12.
- This makes it suitable for safe installation

- above fire protection ceilings.
- Depending on the version, 15, 30 or 70 cables can be fixed.
- The lock, which can be operated without tools, allows easy subsequent cable-laying and thus ensures a high degree of ease of installation.
- The multi cable support is variably suitable for wall and ceiling installation.
- Halogen-free and without fire load.

Characteristics

Functioning

- The multi cable support is fixed to walls or ceilings with plugs and screws or metal anchors suitable for the substrate and application.

Wall slot clip FWSC

The quick tool-free cable fixing in wall slots

Cable fixing in wall slots > 30 mm

Cable fixing in wall slots < 55 mm

Applications

8

- Cables in wall slots of 30 - 55 mm width

Advantages

- With the fischer FWSC wall slot clip, cables can be fixed quickly and without tools in wall slots 30 to 55 mm wide.
- This reduces installation time by up to 50%.
- The high expansion power of the wall slot clip guarantees a reliable fixing of the

Building materials

- Concrete
- Masonry

Versions

- POM, recyclable

cables.

- Damage to the cables can be excluded due to the expansion principle.
- Thanks to its neutral colour, the wall slot clip does not shine through the plaster.
- The wall slot clip is made of halogen-free material.

Functioning

- The cables to be fastened are inserted into the wall slot.
- By pressing together the wall slot clip is compressed and tensed to be ready for installation in the wall slot.
- The wall slot clip can be compressed in length or width as required and thus used for wall slots with a width of 30 to 55 mm.

Installation FWSC

Nail disc NSB

The secure cable fixing in wall slots

Cable fixing

Cable fixing in slits

Applications

8

- Cables in wall slots

Advantages

- The nail disc NSB allows for use in two slot widths.
- The vaulted structure of the nail disc ensures an optimal contact pressure and, as such, for a secure hold.
- The flat nail disc only protrudes slightly,

- and can thus be easily plastered over.
- The nail disc NSB is made from high-strength polypropylene. The nail is made from hardened, galvanised steel. The tried and tested material combination for in-wall installation.

Building materials

- Vertically perforated brick
- Pumice
- Lightweight aggregate concrete
- Aerated concrete
- Hardboard
- Wood
- Chipboard
- Plywood
- Solid panel made from gypsum

Functionality

- Remove cable.
- Align the nail disc with either dimensions 27 mm or 34 mm, depending on the slot width, and hit the nail in with a hammer.
- The cables are fixed in the wall slots by the curved washer.

Installation NSB

Technical data

Nail clip NS/MNS

The fast fixing for electric cables

Cable fixing

Cable fixing

Applications

8

- Electric cables with varying diameters

Advantages

- The nail clip features a pre-assembled zinc-plated nail, allowing for a fast fixing, thus reducing assembly time.
- The small space required for fixing simplifies

installation in narrow spaces.

- The nail clip MNS covers cable diameters from 4 mm to 14 mm with just 3 sizes.

Building materials

- Hardboard
- Wood
- Aerated concrete
- Chipboard
- Plywood
- Solid gypsum panels and other plastered substrates

Functioning

- Position the nail clip with the laid cable. Hammer in the pre-assembled nail with a hammer.

Installation NS/MNS

Spacer pipe clamp AM/AMD

The installation-friendly metal spacing disc for cables and pipes

Fixing steel armoured conduits

Fixing conduits

Applications

8

- Steel conduits
- Electric cables
- Copper and metal pipes

Advantages

- The fast-locking latch ensures easy opening and closing without completely removing the screw, and allows for a simple and fast installation.
- The pre-fitted combination screw with

conventional slotted or recessed screw head allows for the use of different screwdrivers, thus allowing for a simple installation.

Building materials

When using nail anchor FNA II:

- Concrete
- Solid sand-lime brick
- Natural stone with dense structure
- Pre-stressed concrete hollow slabs

When using Hammerfix N:

- Concrete
- Solid sand-lime brick
- Building brick
- Natural stone
- Solid brick made from lightweight concrete

Functioning

- The spacer clamp AM with M6 thread can either be affixed with fischer nail anchor FNA II 6x30 M6x43, stud screw STST 6x60 and STST 6x80 or with Hammerfix N 6x40/10 M6.

Conduit clip BSM/BSMD/BSMZ

The flat metal clip for cables and pipes

Fixing armoured conduits

Applications

- Electrical conduits
- Flexible and rigid plastic insulating pipes
- Steel conduits

Advantages

- The open conduit clip BSM is ideal for the post-installation fixing of conduits.
- The conduit clip allows for a direct fixing with impact nails and is, therefore, quick

and easy to install.

- Two conduits or pipes can be fixed with just one fixing point with the twin clamp BSMZ.

Building materials

When using impact nail ED:

- Concrete

Functioning

- Depending on your requirements, use a conduit clip with 1 or 2 fixing points, or a twin clamp.
- The conduits or pipes are laid in the conduit clip. Assembling the clip fixes the conduits / pipes.
- Our recommendation for fixtures on concrete: Impact nail.

Textile web strapping GWB

Textile web strapping GWB for cost-effective, easy pipe fixings

Flexible and rigid plastic insulation pipes

Applications

- Pipelines
- Flexible and rigid plastic pipes
- Compound pipes

Properties

- Material: polypropylene

Advantages/benefits

- Pipe fastening using textile tape allows cheap and simple installation.
- The textile tape roll allows the correct tape length to be chosen to suit the diam-

Building materials

- When using impact nail ED:
- Concrete

- eter in question.
- Hangings with textile tape are a fast solution for temporary fixings.

Perforated steel banding LBV/LBK

Perforated steel banding LBV / LBK for the fast fixing of pipelines

Plastic pipes

Applications

- Steel tape with stamped holes for simple installation; available zinc-plated LBV or plastic-covered LKB
- The fischer nail anchor FNA II is suitable for ceiling fixing in concrete
- Use fischer thread hanger RAH for fastening to threaded rods

Properties

- Material: DX51D+Z 100 (material no. 1.0917) acc. to DIN EN 10.346 For Type LBW17: Q235
- Zinc plating: electro zinc-plated, min. 5 µm
- Protective coating LBK: PE

Advantages/benefits

- The perforated tape's material thicknesses and plastic covering allows the tapes to be easily cut to size using metal

Building materials

- When using impact nail ED:
- Concrete

- shears.
- The perforated tape's hole geometry enables concrete fixing using the fischer impact nail ED.

Impact nail ED

Fixing in concrete without pre-drilling

Fixing armoured conduits

Fixing perforated tapes

Applications

- Conduit clips such as BSM, BSMD, BSMZ
- Perforated band such as LBK, LBV

Advantages

- The stable impact nail ED can be set in concrete with the impact nail setting tool SZE without pre-drilling. This allows for a

- fast installation.
- The setting tool SZE impact protection provides the best protection for your hand, thus ensuring a safe installation.

Building materials

- Concrete

Functionality

- The impact nail ED is set in the setting tool SZE.
- The bracket in the setting tool holds the nail securely in place during the installation procedure.
- Pre-positioning of the element to be fixed.
- The nail can be hammered through the fixing element directly into the concrete.

Cable tie BN/GBN/UBN

For the simple bundling of cables and pipes

Bundling electric cables

Electric cables

Applications

For bundling of:

- Electric cables
- Flexible and rigid plastic insulating pipes
- Steel conduits

Advantages

- The long-lasting nylon material is halogen- and silicone-free.
- The cable tie UBN (black) is made from

UV-stabilised material.

Characteristics

Functioning

- Lie the cable tie around the object to be fixed, and pull the band through the head of the cable tie. The cable tie can no longer be opened due to the latching of the tab in the teeth.
- Temperature resistance once installed from -10 °C to +85 °C.
- Recommended installation temperature from -10 °C to +85 °C.
- Flammability material UL 94-V2.

Cable tie plug FCTP

The universal fixing point for cable ties

Electric cables

Flexible and rigid plastic pipes

Applications

- Universal fixing point for fixing of cables and pipes using cable ties

Advantages

- The FCTP cable tie plug combines the function of a plug and an eyelet to which cable ties up to 9.5 mm width can be attached (e.g. fischer BN or UBN).
- It offers a universal fixing point to which various cables and pipes can be at-

Building materials

- Concrete
- Solid brick
- Solid sand-lime brick

Versions

- Nylon, halogen-free

tached.

- Installation is simple and time-saving by driving the plug into the drill hole.
- The lamellas of the plug ensure a secure hold in the building material and thus fix the cable tie in the intended position.

Functioning

- The cable tie plug can be hammer set.
- A cable tie is inserted through the eyelet and the object to be fastened is fixed in the intended position.
- The eyelet with a width of 9.5 mm and a height of 3 mm is suitable for all fischer cable ties.

Wireclip WIC

Infinitely variable fixing of wire suspensions

Suspension of signs

Suspensions for trade show exhibits

Applications

For suspension of:

- Lighting strips
- Cable trays
- Ventilation ducts
- Pipes
- Signs
- Chilled ceilings

Advantages

- The simple system guarantees ease of use.
- The Wireclip's simple closing mechanism means that no tools are needed. This

allows for a cost-effective installation.

- The reclosable Wireclips make it possible to adjust the length at any time. This guarantees the greatest flexibility.

8

Functionality

- Loops are formed from the wire, which can be threaded through the wireclip. This allows objects to be hung. The wireclips can be adjusted at any time.
- The FNA II 6x25 OE is suitable for fixing the wire.

Note:

- Do not apply paint or any other coating.
- Do not apply lubricant.
- Do not use for lifting loads.
- Remove damaged wire ends using the wire cutter WIZ prior to introducing wires into the wire clip.

Wash basin and urinal fixings	504	

Sanitary fixings for board materials

Complete fixing sets for wash basins and urinals in board building materials and plumbing walls

Urinals

Wash basins

9

Applications

- Wash basins
- Urinals

Advantages

- With their special geometries, KM and WDP are the specialists for fixings in plumbing and hollow walls.
- The wide transition beams of the KM and

the large base plate of the WDP ensure a good load distribution, thus allowing for a high load-bearing capacity.

Building materials

- Gypsum plasterboard and gypsum fibreboards
- Chipboard

Functioning

- KM is suitable for push-through installation.
- When placed in the drill hole, the wide transition beam of the KM independently swings open behind the board.
- WDP is set into the plumbing walls during wall installation.

Ceramic fixings

Complete fixing sets for free-standing toilets and bidets

Free-standing toilets

Bidets

Applications

- Free-standing toilets
- Bidets
- Ceramic shelves
- Mirrors

Characteristics

Advantages

- Complete fixing sets including brass screws allow for quick and easy installation.
- A pronounced rim prevents contact between the screw and ceramics, thus ensuring nothing gets damaged during

Building materials

- Concrete
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick made from lightweight concrete
- Solid brick

- fixing.
- The WB5N's assembly bracket with pre-drilled rows of holes allows for a flexible fixing with two directions.
- The WCN is also suitable for fixing ceramic shelves and mirrors, and can thus be used for a wide range of applications.

Functioning

- S 8 RD is suitable for push-through installation.
- WCN and S 8 D are suitable for both pre-positioned and push-through installation.
- The WB5N's assembly bracket is flexibly positioned on the base using the long hole. The ceramics are then fixed to the bracket via the rows of holes. These counterbalance any height differences in the ceramic assembly holes.

Washbasin fixing WST Klik

For the safe one-man installation of washbasins

Fixing of washbasins

WST Klik with SX plug in concrete

9

Applications

- Wall-mounted washbasins

Advantages

- The complete mounting set including the fixing sleeve enables safe and quick mounting. The “click” sound confirms correct mounting.
- By engaging the two sleeves, the washbasin can no longer tilt forward, enabling easy one-man assembly.
- By turning the black sleeve, the washbasin can be optimally aligned and adjusted afterwards.
- The aging- and chemical-resistant fixing

- sleeve made of consistent plastic guarantees permanently secure fastening.
- The enclosed fischer SX plug enables installation in many building materials such as concrete, aerated concrete and masonry made of solid or perforated construction material.
- By opening the black fixing clips, the washbasin can be easily disassembled.

Characteristics

Building materials

- Concrete
- Solid brick
- Solid sand-lime brick
- Aerated concrete
- Vertically perforated brick
- Perforated sand-lime brick

Functioning

- The expansion plug SX is suitable for push-in and push-through installation. When screwing in the screw, the SX expands in four directions and thus securely fixes into the building material.
- The single parts of the fixing sleeve are mounted in advance in the opening of the ceramic back panel and plugged into each other.
- The washbasin is then slipped over the pre-assembled stud screw and pushed onto the wall.
- After the fixing sleeve has engaged, the washbasin no longer tilts forward. This allows the washbasin to be optimally aligned and then fixed with the nut.
- The maximum load capacity is only achieved when the minimum screw-in depth is reached. Tiles and plaster are considered as non-load-bearing substrates.

Installation WST Klik

WST Klik 140	541480	14	90	70	M 10 x 140	28 - 40	1

Loads

Washbasin fixing WST Klik in combination with expansion plug SX

Recommended loads^{1) 2)} for a single anchor.

Type		WST 120 Klik	WST 140 Klik
Expansion plug SX	[mm]	12 x 60	14 x 70
Recommended load in the respective base material F_{rec}			
Concrete	\geq C20/25	[kN] 1.70	1.90
Vertically perforated brick	\geq Hlz 12	[kN] 0.26	0.50
Solid brick	\geq Mz 12	[kN] 0.70	1.90
Solid sand-lime brick	\geq KS 12	[kN] 1.70	1.90
Aerated concrete	\geq AAC 2	[kN] 0.14	0.29
Aerated concrete	\geq AAC 4	[kN] 0.45	0.73

¹⁾ Required safety factors are considered. Load values are valid for using the supplied plug and the stud screws with the specified diameter.

²⁾ Valid for tensile load, shear load and oblique load under any angle.

Wash basin and urinal fixings

Complete fixing sets for wash basins, urinals and sanitary installations

Urinals

Wash basins

9

Applications

- Wash basins
- Urinals
- Built-in toilets
- Boilers
- Gas heaters
- Cisterns
- Consoles

Characteristics

Advantages

- Complete fixing sets allow for quick and easy installation.
- The universal plug UX can be used in solid and hollow materials, thus offering a high level of flexibility.
- Flanged nuts and collar sleeves made of high-strength nylon are resistant to

Building materials

- Concrete
- Vertically perforated brick
- Hollow blocks made from lightweight concrete
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone
- Aerated concrete
- Solid panel made from gypsum
- Solid brick made from lightweight concrete
- Solid brick

ageing and chemicals, and guarantee a long-lasting fixing that will not damage the ceramics.

- Cover caps with a high-quality chrome finish ensure the fixture remains visually attractive for a long period of time.

Functioning

- The rimless UX is suitable for pre-positioned and push-through installation.
- Screwing in the screw causes the UX to expand in solid and hollow building material.
- Maximum load-bearing capacity is only achieved when the minimum screw-in depth is reached.
- Tiles and plaster are not classed as load-bearing base materials.

Scaffold and eye screw fixings

Scaffold anchoring GS 12 + plug	510	
Scaffold anchoring FI G	513	
Eye screw GS	515	
Ring nut RI	518	

Scaffold anchoring GS 12 + plug

The standard scaffold anchoring

Scaffold anchoring

Façade scaffolds

Applications

- Façade scaffolds
- Ropes
- Chains
- Trellises
- Lighting
- Clothes lines
- Hanging baskets

Advantages

- The ideal interaction of the scaffold eye-bolt and plug allows for a high load-bearing capacity, thus providing increased safety.
- The high-quality weld stops the eye from opening.

- The large diameter of the cover caps (available separately) covers drill holes completely and discreetly, even those with slightly broken edges.

Certificates

Building materials

GS 12 + S 14 ROE suitable for:

- Concrete
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick
- Solid brick made from lightweight concrete

GS 12 + S 16 H R suitable for:

- Vertically perforated brick
- Perforated sand-lime brick
- Aerated concrete

Functioning

- In order to achieve the maximum load-bearing capacity, nylon plugs should only be used once.
- The combination with plug S 16 H R is recommended for perforated brick and aerated concrete.
- The screw-in markings provide a visual control during assembly, and thus allow for a simple and problem-free installation.
- Pre-drill into wood when not using plugs. The drill bit diameter should equal the core diameter of the screw.
- Suitable cover caps AD 12x40 (see page 514) for closing off remaining drill holes for S 14 ROE.
- Not suitable for swings, hammocks etc.

Installation GS 12

Loads

Scaffold anchoring S 14 ROE / S 16 H R + GS 12

Mean ultimate loads¹⁾ for tension of a single anchor.

Type			S 14 ROE + GS 12	S 16 H R + GS 12
Mean ultimate loads for tension in the respective base material N_u				
Concrete	$\geq C20/25$	[kN]	14.5	-
Solid brick	$\geq Mz 12$	[kN]	13.0	-
Solid sand-lime brick	$\geq KS 12$	[kN]	14.5	-
Solid brick of lightweight aggregate concrete	$\geq V 2$	[kN]	3.0	-
Perforated sand-lime brick	$\geq KSL 12$	[kN]	-	5.0
Vertically perforated brick	$\geq Hlz 12$	[kN]	-	3.5
Aerated concrete	$\geq AAC 4$	[kN]	3.0	3.0

¹⁾ On these values an appropriate safety factor has to be considered.

Scaffold anchoring FI G

The scaffold anchoring with metric thread M 12

Scaffold anchoring

Façade scaffolds

Applications

- Façade scaffolds
- Trellises
- Tensioning ropes
- Chains
- Lighting
- Clothes lines
- Hanging baskets

Advantages

- When used together with an internal threaded anchor or a steel fixture with internal thread M 12, the scaffold screw FI G allows for repeated installation and removal using the same fixing point.

- The high-quality weld stops the eye from opening, thus providing increased safety.

10

Building materials

When combined with internal threaded anchor:

- Concrete C20/25 - C50/60:
Injection mortar FIS EM Plus / FIS V
Internal threaded anchor
RG 18x125 M12 I, Art.-No. 50562
ZYKON undercut anchor FZA-I
FZA 22x100 M12 I, Art.-No. 060763
- Masonry:
Injection mortar FIS V 360 S
Perforated sleeve FIS H 20x85 K, Art.-No. 41904
Internal threaded anchor
FIS E 15x85 M12, Art.-No. 43634

Functioning

- The scaffold anchoring FI G should be used with an internal threaded anchor. Detailed information about its functioning can be found in the "Chemical fixings" chapter.
- Not suitable for swings, hammocks etc.

Installation FI G

Eye screw GS

The universal eye screw for use with fischer plugs or for direct use in wood

Hanging baskets

Trellis

Applications

- Ropes
- Chains
- Trellises
- Lighting
- Clothes lines
- Hanging baskets

Certificates

Advantages

- The ideal interaction of the eye screw and plug allows for a high load-bearing capacity, thus providing increased safety.

- The high-quality weld stops the eye from opening.

10

Building materials

GS 8 + SX 10 or GS 10 + SX 12 suitable for:

- Concrete
- Solid brick
- Perforated brick
- Aerated concrete

GS 10 + S 12 R suitable for:

- Concrete
- Solid brick

GS 10 + S 14 H R suitable for:

- Perforated brick

GS 8 or GS 10 without plug suitable for:

- Wood

Functioning

- Pre-drill when using with wood. The drill bit diameter should equal the core diameter of the screw.
- The maximum load-bearing capacity is achieved when combined with the plugs recommended by fischer (see table "Technical Data"). The nylon plug must only be used once.
- Not suitable for swings, hammocks etc.

Vertically perforated brick	≥ Hlz 12 (ρ ≥ 1 kg/dm ³)	[kN]	-	-	0.36	0.50
Aerated concrete	≥ AAC 2 (G2)	[kN]	0.09	0.20	-	-
Aerated concrete	≥ AAC 4 (G4)	[kN]	0.30	0.60	-	-

¹⁾ Required safety factors are considered.

Ring nut RI

The ring nut for all fixings with threaded studs

Transmission of loads

Applications

- Ropes
- Chains
- Trellises
- Lighting
- Clothes lines
- Hanging baskets

Advantages

- The metric internal thread gives the ring nut RI flexibility and means it can be used with a range of steel anchors or thread-

ed rods; e.g. FH II, FHB II-A, RG M, FZA, FAZ II, FIS A.

Building materials

- In line with the anchor used:
- Concrete, cracked and non-cracked
 - Solid and perforated brick

Functioning

- The ring nut is to be used with an anchor with threaded studs.
Detailed information about its functioning can be found in the “High performance steel anchors” and “Chemical fixings” chapters. The following anchors, for example, can be used: FHB II, RG M, FZA, FAZ II, FIS A.
- Not suitable for swings, hammocks etc.

Installation RI

Technical data

Insulation support DHK

The cost-effective plastic insulation support for all conventional insulating boards

Insulating materials in rear-ventilated façades

Insulating materials in rear-ventilated façades

Applications

To fix soft and pressure-resistant insulating materials in rear-ventilated façades, such as:

- Mineral / glass wool
- PU panels
- Light building boards made of wood wool
- Cork boards / coir matting
- Polystyrene
- Foam glass tiles

Advantages

- The optimised geometry of the expansion section ensures a low anchorage depth and reduces the amount of drilling required.
- Flexible pins in the plate area adapt to the insulating material, and ensure a sustained contact pressure.
- The simpleammerset installation allows

for a quick installation process and thus reduces workload.

- The colouring of the DHK means that it does not stand out on black clad insulating material in rear-ventilated façades.
- The DHK 45 is suitable for use in pressure-resistant insulating boards and reveals.

Building materials

- Concrete
- Hollow blocks made from lightweight concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone with dense structure
- Aerated concrete
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The DHK is set in push-through installation using a hammer.
- The plate size of the insulation support is to be selected in line with the compressive strength of the insulating material: DHK 45 for pressure-resistant; DHK 90 for soft insulating materials.
- The expansion of the ribs in the drill hole gives the DHK an ideal contact pressure.
- Temperature range when installed: -40 °C to +80 °C.

Installation DHK

DHK 45/100	080895	8	30	20	125	100	250

Loads

Insulation support DHK

Recommended loads¹⁾ for a single anchor.

Type		DKH
Recommended loads in the respective base material $F_{rec}^{2)}$		
Concrete	$\geq C12/15$	[kN] 0.03
Solid brick	Mz 12	[kN] 0.03
Solid sand-lime brick	KS 12	[kN] 0.03
Perforated sand-lime brick	KSL 6	[kN] 0.03
Vertically perforated brick	Hlz 12	[kN] 0.02
Aerated concrete	$\geq AAC 2 (G2)$	[kN] 0.02

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile load.

Insulation support DHM

The fire-protection-tested metal insulation support for fire-resistant insulating boards

Pressure-resistant insulating materials on ceiling undersides

Pressure-resistant insulating materials in curtain façades

Applications

To fix fire-resistant soft or pressure-resistant insulating materials, such as:

- Mineral / glass wool
- Light building boards made of wood wool
- Foam glass tiles

Also suitable for:

- Polystyrene boards
- Coir matting

Advantages

- The metal insulation support achieves fire resistance F 120. This means that it can be used where there are fire resistance requirements.
- The DTM 80 plate for soft insulating materials (available separately) simplifies storage and minimises costs.
- The simple hammer-set installation allows

for a quick installation process and thus reduces workload.

- The shaft geometry allows setting in aerated concrete without pre-drilling, thus saving a stage of installation.
- Stainless steel version DHM A2 (1.4301) for wet and exterior applications.

Certificates

Fire resistance classification
R120

Building materials

- Concrete
- Hollow blocks made from lightweight concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone with dense structure
- Aerated concrete
- Solid brick made from lightweight concrete
- Solid brick

Functioning

- The insulation support is set in push-through installation using a hammer.
- When hammered in, the expansion part tightens like a spring with the substrate.
- Use the DTM 80 plate (available separately) to fix soft insulating materials.

Installation DHM

Render fixing DIPK

The cost-effective hammer-set anchor with plastic nail

Pressure-resistant insulation boards with rendering

Applications

To fix pressure-resistant insulating materials in façades, such as:

- Polystyrene boards
- Light building boards made of wood wool
- Cork boards / coir matting
- PU panels

Advantages

- The glass-fibre-reinforced plastic nail (GRP nail) reduces the heat transmission and prevents marks on the plaster surface.
- The simple hammer-set installation allows for a quick installation process and thus reduces workload.
- The well-proven design with low anchor-

age depth reduces the amount of drilling required, thus achieving a high level of efficiency.

- The DIPK can be used universally in rear-ventilated curtain façades, as well as in plaster façades.
- The surface of the anchor plate is suitable to use as a plaster base

Building materials

- Concrete
- Hollow blocks made from lightweight concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Solid sand-lime brick
- Natural stone with dense structure
- Solid brick

Functioning

- Non-bearing layers, such as adhesive and/or old render, are to be included in the anchor's useful length.
- The DIPK is set in push-through installation using a hammer.
- In solid materials the GRP nail needs to be shortened at the predetermined breaking point.
- Driving the nail into the anchor shaft causes the DIPK to expand in the base material.

Installation DIPK in concrete

Render fixing FIF-PN 8

The pre-assembled hammerset anchor with reinforced plastic nail

Polystyrene rigid foam boards

Setting the hammerset fixing on polystyrene rigid foam boards

Applications

- Fixing of ETICS insulation boards on concrete and masonry
- Flush-to-surface installation in ETICS insulating materials e.g. polystyrene

Approvals

ETA-18/0253, for concrete and masonry

Advantages

- To set with few hammer blows.
- The disc fits tight into the insulation thanks to its thickness of only 2.7 mm. Thus allows the application of low-cost, thin reinforcement layers.
- Optimised retention forces thanks to the glass fibre reinforced plastic nail (GRP).
- Small anchoring depth of 35 mm saves

Building materials

- Building material classes A, B, C, D, E
- Concrete
- Building brick
- Solid sand-lime brick
- Hollow blocks made from lightweight concrete
- Vertically perforated brick
- Perforated sand-lime brick
- Lightweight aggregate concrete
- Aerated concrete

- on drilling times.
- Thanks to the GRP nail, the fixing is free of thermal bridging with the Chi value 0.000 [W/K].
- The compression zone in the shank allows the disc to be drawn precisely into the insulation.
- For insulating material thicknesses up to 180 mm.

Functioning

- The fixing is set in push-through installation.
- Simple, fast setting by driving the GRP nail in using a standard hammer.
- Non load bearing layers such as adhesive and old plaster are included in the maximum useful length.

Render fixing FIF-CS 8

The economic screw fixing for all ETICS insulation materials

Screwed fixing of insulation boards

Polystyrene rigid foam boards O35 on perforated sand-lime brick

Applications

- Fixing of ETICS insulation boards on concrete and masonry
- Flush installation in all conventional insulation materials

Approvals

ETA-15/0006, for concrete and masonry

Advantages

- Compound screw minimises the thermal bridge, thus there are no fixing marks on the façade.
- Less drill wear and drill time due to minimum installation depth of 35 mm in the substrate.
- With flush installation, the disc tapers to a

Building materials

Autoclaved aerated concrete blocks AAC according to EN 771-4:2011	≥ 0.5	4	35 ⁷⁾	100	0.10	100	100

¹⁾ The partial safety factors for material resistance as regulated in the assessment as well as a partial safety factor for load actions of $\gamma_L = 1,5$ are considered.

²⁾ Possible minimum spacing resp. edge distance according to assessment.

³⁾ Plastic anchor for fixing of external thermal insulation composite systems with rendering according to ETAG014. Only tensile wind loads are permitted.

⁴⁾ The given loads are valid for installation and use of fixations in dry base material for temperatures in the substrate up to +24 °C (resp. short term up to +40 °C).

⁵⁾ Restrictions concerning the manufacturer and the permissible hole patterns as well as the web thickness see assessment.

⁶⁾ Drill method hammer drilling.

⁷⁾ Rotary drilling.

Insulation Disc DT

The insulation disc for combination with termoz and termofix screw fixings

Flush mounting of wood fibre boards on wood constructions

Applications

- Used in combination with TermoZ, FIF and TermoFix anchors to fix ETICS insulating boards with low compressive strength
- Flush surface installation in ETICS insulating materials e.g. mineral wool

Advantages

- The various disc diameters allow for individual adaptation to various insulation materials and requirements and offer

the greatest flexibility with wide-ranging applications.

Functioning

- The discs are set in push-through installation.
- Push the selected DT insulating disc onto the TermoZ, FIF or TermoFix anchor and fit.

Technical data

Insulation discs DT

DT 90

DT 140	008690	16	100

Insulation discs

Discs for combining nail and frame fixings, as well as screws

Insulating materials in two-leaf external walls

Applications

- To fix soft and pressure-resistant insulation materials.
- DT 90/4 on VB wall tie
- DT 60/10, DTM 60/10 and DTM 70/10 in combination with 10 mm frame fixing
- DT 90/8 and insulation washer 8/60 in combination with 8 mm frame or nail fixings
- HV and HK 36 with 5 mm screws

Advantages

- The various disc diameters allow for individual adaptation to various insulation materials and requirements and offer the greatest flexibility with wide-ranging applications.
- The flexible pins in the DT 90 ensure sustained pressure on the insulation, thus

providing a secure hold.

- The DTM 60 made of stainless steel A4 makes it possible to use a frame fixing, and allows for a secure fixing of the insulation material in façade construction in cases of high requirements.

11

Functioning

- The disc size is to be selected in line with the compressive strength of the insulating material.
- To be combined with anchors, screws or nails corresponding to the available base material.
- DT 90/4 is suitable for pushing on to fischer wall tie VB.

TermoFix H

The disc element for use with standard screws

Flush mounting of mineral wool boards

Applications

- Fixing of ETICS insulation boards with standard screws

Building materials

- Panel building materials
- Solid wood

Advantages

- The polystyrene plugs are included with the disc element TermoFix H 10.
- In case of disc elements TermoFix H 50, 90 and 150 the disc is sealed using the sealing cap moulded on.
- An air column is produced between the screw head and this seal. This reduces

- thermal-transmission losses.
- Extremely economical thanks to different shank lengths. This allows the screw length to be reduced if necessary.
- Can be combined with the insulating discs DT 90, DT 110 and DT 140.

Functioning

- The fixing (disc and screw) is set in push-through installation.
- Non-load-bearing layers such as adhesive and old plaster should not serve as an anchoring base.

Retaining disc with screw DHT S

The installation-friendly polyamide retaining disc for panel building materials

Pressure-resistant insulation boards on timber constructions

Pressure-resistant insulation boards on timber constructions

Applications

To fix pressure-resistant insulating materials in plaster façades, such as:

- Polystyrene
- PU panels
- Light building boards made of wood wool
- Cork boards / coir matting

Advantages

- The DHT-S screw allows setting without pre-drilling, thus saving a stage of installation.
- The plug reduces the heat transmission and prevents marks on the plaster surface.

- The extremely thin disc construction allows for use with thin layers of plaster and reinforcements and offers maximum flexibility.

Certificates

Building materials

- Wood and wooden materials
- Board thickness up to 0.8 mm

Functioning

- Non-bearing layers, such as adhesive, are to be included in the useful length.
- The retaining disc with screw is set in push-through installation with a cordless screwdriver.
- A PH2 bit is required for installation.
- After installation, seal the screw hole with the enclosed plug.

Insulation fixing FID

Thermal bridge-free installation in insulation materials

Letterbox

External lighting

Applications

To fix lightweight attachments on ETICS facades. The application areas are ETICS facades made of:

- Polystyrene
- Mineral wool
- Soft wood fibre
- Alternative ecological insulation boards

Advantages

- Since the anchor is set exclusively in the insulation itself, fixtures can be installed without thermal bridges.
- The geometry of the FID allows for a simple installation in thin layers of plaster, without the need for pre-drilling, thus saving a stage of installation.
- The FID 50 is used in thin insulating

boards from 50mm. The FID 90 is used in thicker insulating boards, and can bear higher loads.

- The bit mounting allows for setting with standard tools, thus allowing for a fast and economic installation.

Building materials

- Non-plastered, pressure-resistant insulating boards
- Plastered, pressure-resistant insulating boards
- ETICS insulating boards

Functioning

- The FID can be set in the insulating board with a cordless screwdriver or by hand.
- The special spiral thread taps itself in the insulating board.
- Fixtures are fixed with a 4.5 mm screw for the FID 50, and with a 6 mm screw for the FID 90.
- Water ingress in the insulation can be prevented by sealing the plug collar with a suitable sealant after successful pre-positioned installation.
- We recommend to predrill an 6 mm hole in ETICs rendering.

Installation FID

Technical data

Insulation fixing FID

FID 50

FID 90

Item	Item No.	Anchor length l [mm]	Min. bolt penetration [mm]	Wood and chipboard screws d_s [mm]	Drive	Sales unit [pcs]

Polystyrene	PS 20	[kN] 0.10	0.20

¹⁾ Required safety factors are considered.

²⁾ Valid for tensile loads.

Insulation fixing FID-R

Thermal bridge-free installation of rainwater downpipes in insulation materials

Rainwater downpipes

Applications

- Thermal bridge-free installation of rainwater downpipes

Advantages

- Since the anchor is set exclusively in the insulation itself, fixtures can be installed without thermal bridges. The anchor offers an energy-optimised fixing.
- The hard-centering tip cuts its own way through the plaster, without the need

for pre-drilling, thus saving a stage of installation.

- The TX-drive allows for setting with standard tools, thus allowing for a fast and economic installation.

Building materials

- Polystyrene insulating boards
- Wood fibre insulating boards
- External thermal insulation composite system (ETICS)

Functioning

- The installation is carried out without any special tools.
- The spiral thread taps itself in the insulation board.
- For the installation in wood fibre insulating boards a pre-drilling of the insulating board with 16 mm is necessary.
- For the installation before plastering the threaded rod is protected by a tube sleeve.
- The included white covering rosette with glued on PE sealing disc protects against humidity.

Installation in plastered insulating boards

Installation in non-plastered insulating boards

Insulation fixing FID Green

Thermal bridge-free installation in insulation materials

External lighting

Letterbox

Applications

To fix lightweight attachments on ETICS facades. The application areas are ETICS facades made of:

- Polystyrene
- Mineral wool
- Soft wood fibre
- Alternative ecological insulation boards

Certificates

Advantages

- Produced with at least 50% renewable raw materials and therefore particularly environmentally friendly.
- Just as effective, secure and durable as regular FID plugs. To fix lightweight fixtures in plastered and non-plastered

Building materials

- Non-plastered, pressure-resistant insulating boards
- Plastered, pressure-resistant insulating boards
- ETICS insulating boards

insulating boards.

- Thermal bridge-free mounting when exclusively set in insulation material.
- Installation without pre-drilling even through thin plaster layers, thus saving a work step.
- Easy to set using a standard bit.

Functioning

- The FID GREEN can be set in pre-positioned installation with a cordless screwdriver or by hand.
- With its strong drill tip, the insulation fixing FID GREEN breaks through thin plaster layers and cuts a positive fit into the insulation panel with its specially shaped spiral thread.
- From a plaster thickness of 5 mm, we recommend to create a 6 mm hole. This serves for better guidance of the fastener in the setting process.
- Water ingress in the insulation material can be prevented by sealing the plug collar after successful installation.
- Attachment parts can be easily attached with screws.
- We recommend to predrill an 6 mm hole in ETICS rendering.

Holding clamp DVN

The installation-friendly insulation clamp

Pressure-resistant insulation boards on timber constructions

Pressure-resistant insulation boards on ceiling undersides

Applications

- To fix pressure-resistant insulation materials (e.g. polystyrene, PU panels, glass foam boards) onto timber sub-structures, predominantly in the ceiling area

Advantages

- The holding clamp DVN allows for a hidden installation for a homogeneous surface.
- The complete fixing system, comprising the clamp and zinc-plated nails, allows for an immediate installation in line with

- building requirements.
- The Sendzimir-galvanised steel claw allows for durable use for the secure anchoring of pressure-resistant insulation materials.

1c premium installation foam PU 500/750

The high-quality one-component rapid installation foam with reusable fix adapter system

Window connection joints

Sealing concrete manhole rings

Applications

- Bonding and sealing manhole rings
- Insulating and filling in roofing work and dry construction
- Insulating and filling window connection joints, around window sills and shutter boxes
- Insulating and filling finished elements, wall connections and wall penetrations

Advantages

- The reclosable fix adapter allows for immediate use and for the reuse of opened cans, thus guaranteeing long-lasting functionality.
- The used solid valve prevents adhesion when being stored horizontally and premature gas loss.
- The rapid installation foam has been

approved as watertight by an external inspection and is thus suitable for use in wet conditions. It fulfils the requirements of a well foam.

- The ergonomic handle sits perfectly in the hand and allows for easy use.

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster

Certificates

- General test certificate from building authorities P-NDS04-136 for B2
- Proven joint soundproofing: R(ST,w)=61 (-1; -3) dB in line with ISO EN 717-1
- Test for watertightness for the adhesion of manhole rings

Functioning

- 1-component PU foam
- Building material class B2 or B3
- Processing temperature environment: +5 °C to +35 °C (can temperature: +5 °C to +25 °C)
- Non-tacky after approx. 20 minutes
- Can be cut after approx. 40 minutes
- Cures within 5 to 8 hours
- Temperature resistant from -40 °C to +90 °C
- Layer thicknesses > 50 mm: foam in several layers and then dampen.
- Fresh foam stains can be removed immediately with fischer PU cleaner.

1c rapid installation foam PU S 500/750 B2

The high-quality rapid installation foam with proven sound insulation and resistance of water pressure

Window connection joints

Sealing concrete manhole rings

Applications

- Insulating and filling window connection joints, around window sills and shutter boxes
- Bonding and sealing manhole rings
- Insulating and filling in roofing work and dry construction
- Insulating and filling finished elements, wall connections, wall penetrations and cavities

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster

Advantages

- The proven 63 dB sound insulation fulfills the modern sound insulation and helps to reduce noise.
- The adapter foam has been approved as watertight by an external inspection and is thus suitable for use in wet conditions.

It fulfils the requirements of a well foam.

- The fast screwed adapter allows immediate use and is thus uncomplicated to use without need for additional processing equipment.
- The new non-sticking safety valve guarantees long-lasting functionality.

12

Certificates

- General test certificate from building authorities P-NDS04-136 for B2
- Proven joint soundproofing for B2: $R(ST,w) \geq 63$ (-1; -4) dB according ISO 10140-1
- Test for watertightness for the adhesion of manhole rings
- French VOC-emission class A+

Functioning

- 1-component PU foam
- Building material class B2
- Processing temperature environment: +5 °C to +30 °C (can temperature: +5 °C to +25 °C)
- Non-tacky after approx. 15 minutes
- Can be cut after approx. 45 minutes
- Hardened after approx. 24 hours
- Temperature resistant from -40 °C to +90 °C
- Layer thicknesses > 50 mm foam in several layers and then dampen.
- Fresh foam stains can be removed immediately with fischer PU cleaner.

2) Without protective gloves, for commercial users only.

1c premium flex foam PUP FLEX 750 B2

The elastic one-component gun foam for all-season use with high sound and heat insulation

Window connection joints

Connection joints around shutter boxes

Applications

- For elastic insulation and filling of window connections, roller shutter boxes, window sills and external doors
- For elastic insulation and filling of areas with higher component movement due to thermal or static loads, e.g. in the old-building renovation, in steel construction, in timber-frame construction
- Permanent, elastic foaming of connection joints and cavities in wooden structures and roof extensions, e.g. connection joints on roof windows, dormers, gables, rafters, purlins, eave
- Permanently elastic filling of pipe penetrations, wall penetrations, wall connections and cavities

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals
- Plaster
- Stone

Advantages

- The high elasticity enables the absorption of component movements. This permanently prevents the formation of cracks and thermal bridges and maintains the airtightness.
- The excellent dimensional stability of < 5% guarantees reliable operation under the temperature and humidity conditions that occur. This avoids time-consuming

- reworking.
- Thanks to its winter suitability, the large processing range from -10°C to +35°C enables reliable processing even at minus temperatures. These important requirements are combined in one product.
- The high joint sound insulation of 62 dB meets the standards of modern sound insulation and significantly reduces noise pollution.

Certificates

- General test certificate from building authorities DIN 4102: B2
- Tested joint sound insulation
- Tested air permeability
- Tested thermal conductivity EMICODE® EC 1 Plus - very low emission

Functioning

- 1-component PU foam
- Building material class B2
- Fine-cell and homogeneous foam structure
- Very high elasticity (3 times more flexible)
- Excellent dimensional stability < 5%
- Processing temperature ambient -10 °C to +35 °C (can +5 °C to +35 °C)
- Tack-free within approx. 10 min.
- Can be cut within approx. 30 min.
- Fully cured within approx. 24 h.
- Temperature resistant from -40 °C to +90 °C
- Layer thicknesses > 50 mm: foam in several layers and then dampen
- Fresh foam can be removed immediately with fischer PUR cleaner.

1c premium gun foam PUP 750 B2

The one-component gun foam with proven sound and thermal insulation as well as increased foam yield

Window connection joints

Connection joints around shutter boxes

Applications

- Insulating and filling window connection joints, around window sills and shutter boxes
- Insulating and filling in roofing work and dry construction
- Insulating and filling finished elements, wall connections, wall penetrations and cavities
- Insulating and filling pipe penetrations and ventilation ducts

Advantages

- The thermal protection and proven reduction of air permeability fulfil the high standards for modern thermal protection.
- The proven 61dB sound insulation fulfils the standards of modern sound insulation and helps to reduce noise.
- The high yield of up to 55 l reduces the number of cans needed, thus ensuring maximum economic efficiency.
- The low level of foam expansion during the curing period avoids reworking, thus guaranteeing a simple and time-saving application.
- The new safety valve prevents adhesion when being stored horizontally or during long interruptions of work, thus guaranteeing long-lasting functionality.

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster

Certificates

- General test certificate from building authorities P-NDS04-137
- Proven joint soundproofing $R(ST,w)=61$ (-1;-3) dB in line with ISO EN 717-1
- Proven thermal conductivity: Reduces heat loss by $0.0345 \text{ W}/(\text{m}^2\text{K})$
- Based on DIN 18542, proven airtightness of $a < 0.1 \text{ m}^3/[\text{h}^* \text{m}^2 (\text{daPa})^{2/3}]$
- French VOC-emission class A+
- EMICODE® EC 1 Plus - very low emission

Functioning

- 1-component PU foam
- Building material class B2
- Processing temperature environment: $+5 \text{ }^\circ\text{C}$ to $+35 \text{ }^\circ\text{C}$ (can temperature: $+10 \text{ }^\circ\text{C}$ to $+30 \text{ }^\circ\text{C}$)
- Non-tacky after 8 - 12 minutes
- Can be cut after 40 - 60 minutes
- Hardened after 80 - 100 minutes
- Temperature resistant from $-40 \text{ }^\circ\text{C}$ to $+90 \text{ }^\circ\text{C}$
- Layer thicknesses $> 50 \text{ mm}$: foam in several layers and then dampen.
- Fresh foam stains can be removed immediately with fischer PU cleaner.

Applications

- Insulating and filling component joints, wall connections and wall penetrations
- Insulating and filling in roofing work and dry construction (e.g. in the ceiling area)
- Insulating and filling window connection joints, around window sills and shutter boxes
- Insulating and filling pipe penetrations and ventilation ducts

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster

Advantages

- The compact, handy can allows for use in difficult to access areas, and achieves a high degree of emptying without premature loss of gas.
- The grey colour of the foam is ideally suited to concrete substrates and allows for an inconspicuous filling of joints.
- The proven thermal protection and reduction of air permeability fulfil the high

- standards for modern thermal protection.
- The proven 61dB sound insulation fulfils the standards of modern sound insulation and helps to reduce noise.
- The new safety valve prevents adhesion when being stored horizontally or during long interruptions of work, thus guaranteeing long-lasting functionality.

12

Certificates

- General test certificate from building authorities P-NDS04-137
- Proven joint soundproofing $R(ST,w)=61$ (-1;-3) dB in line with ISO EN 717-1
- Proven thermal conductivity: Reduces heat loss by $0.0345 \text{ W}/(\text{m}^2\text{K})$
- Based on DIN 18542, proven airtightness of $a < 0.1 \text{ m}^3/[\text{h} \cdot \text{m}^2 \cdot (\text{daPa})^{2/3}]$
- EMICODE® EC 1 Plus - very low emission

Functioning

- 1-component PU foam
- Building material class B2
- Processing temperature environment: of $-5 \text{ }^\circ\text{C}$ to $+35 \text{ }^\circ\text{C}$ (can temperature: $+5 \text{ }^\circ\text{C}$ to $+20 \text{ }^\circ\text{C}$)
- Non-tacky after 8 - 12 minutes
- Can be cut after 40 - 60 minutes
- Hardened after 80 - 100 minutes
- Temperature resistant from $-40 \text{ }^\circ\text{C}$ to $+90 \text{ }^\circ\text{C}$
- Layer thicknesses $> 50 \text{ mm}$: foam in several layers and then dampen.
- Fresh foam stains can be removed immediately with fischer PU cleaner.

1c gun foam PUP S 750 B2

The gun foam with proven joint sound-proofing, thermal insulation and water pressure resistance

Window connection joints

Filling pipe penetrations

Applications

- Insulating and filling window connection joints, around window sills and shutter boxes
- To insulate and fill wall penetrations, cavities, wall connections and finished elements
- To seal and bind well shafts, manhole shafts, domestic sewage treatment plants and cisterns

Advantages

- The proven 61dB sound insulation fulfills the standards of modern sound insulation and helps to reduce noise.
- The thermal protection and proven airtightness allows compliance with energy saving according to EnEV and substantiated as effective reduction of heat loss.
- External testing of watertightness when used in connection with hinged manhole

rings fulfils the requirements for a well foam.

- The low level foam expansion during the curing period avoids reworking, thus guaranteeing a simple and time-saving application.
- The new non-sticking safety valve guarantees long-lasting functionality.

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Fibre cement
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals
- Plaster
- Stone

Certificates

- General test certificate from building authorities P-NDS04-137 for B2
- Proven joint soundproofing $R_{(ST,w)}=61$ (-1;-3) dB in line with ISO EN 717-1
- Proven thermal conductivity: Reduces heat loss at $0.0345 \text{ W} / (\text{m} \cdot \text{K})$
- Based on DIN 18542 proven airtightness of $a < 0,1 \text{ m}^3 / [\text{h} \cdot \text{m}^2 \cdot (\text{daPa})^2 / 3]$
- Test for watertightness for the adhesion of manhole rings
- French VOC-emission class A+
- EMICODE® EC 1 Plus - very low emission

Functioning

- 1-component PU foam
- Building material class B2
- Processing temperature environment: +5 °C to +35 °C (can temperature: +10 °C to +30 °C)
- Non-tacky after 8 - 12 minutes
- Cutting time 40 - 60 minutes
- Hardened after approx. 80 - 100 minutes
- Temperature resistant from -40 °C to +90 °C
- Layer thicknesses > 50 mm foam in several layers and then dampen.
- Fresh foam stains can be removed immediately with fischer PU cleaner.

1c maxi gun foam PUP S 500 B2

The proven sound and thermal insulation foam with higher foam yield for professionals in a short can

Window connection joints

Closing joints in structural work

Applications

- Insulating and filling window connection joints, around window sills and shutter boxes
- Insulating and filling finished elements, wall connections, wall penetrations and cavities
- Insulating and filling in roofing work and dry construction (e.g. in the ceiling area)
- Insulating and filling pipe penetrations and ventilation ducts

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster

Advantages

- The short, handy can allows the correct positioning in awkward places and leads without premature gas loss to a high emptying of residues.
- The low level of foam expansion during the curing period avoids reworking, thus guaranteeing a simple and time-saving

application.

- The thermal protection and proven airtightness allows compliance with energy saving according to EnEV and substantiated as effective reduction of heat loss.
- The high joint soundproofing of 61dB fulfils the standards of modern sound insulation and helps to reduce noise.

12

Certificates

- General test certificate from building authorities P-NDS04-137 für B2
- Proven joint soundproofing: $R(ST,w)=61$ (-1;-3) dB in line with ISO EN 717-1
- Proven thermal conductivity: Reduces heat loss at $0.0345 \text{ W}/(\text{m} \cdot \text{K})$
- Based on DIN 18542 proven airtightness of $a < 0,1 \text{ m}^3/[\text{h} \cdot \text{m}^3 \cdot (\text{daPa})^2/3]$

1c premium gun foam PUP 750 B3

The one-component gun foam with the perfect dosage

Window connection joints

Connection joints around shutter boxes

Applications

- Insulating and filling window connection joints, around window sills and shutter boxes
- Insulating and filling in roofing work and dry construction
- Insulating and filling finished elements, wall connections, wall penetrations and cavities
- Insulating and filling pipe penetrations and ventilation ducts

Advantages

- The low level of foam expansion during the curing period avoids reworking, thus guaranteeing a simple and time-saving application.
- The easy dosage allows for a controlled filling and sealing, and ensures that the

correct amount is used.

- The proven 60dB sound insulation fulfils the standards of modern sound insulation and helps to reduce noise.
- The new non-sticking safety valve guarantees long-lasting functionality.

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster

Certificates

- Proven joint soundproofing $R(ST,w)=60$ (-1;-4) dB in line with ISO EN 717-1
- EMICODE® EC 1 Plus - very low emission

Functioning

- 1-component PU foam
- Building material class B3
- Processing temperature environment: +5 °C to +35 °C (can temperature: +10 °C to +30 °C)
- Non-tacky after approx. 15 minutes
- Can be cut after approx. 45 minutes
- Cures within 5 to 8 hours
- Temperature resistant from -40 °C to +90 °C
- Layer thicknesses > 50 mm: foam in several layers and then dampen.
- Fresh foam stains can be removed immediately with fischer PU cleaner.

Technical data

1c premium gun foam PUP 750 B3

¹⁾ Dangerous goods - no express shipping possible.

1c premium gun foam PUP B1 750

The hardly flammable B1 one-component gun foam

Filling cavities in the insulation

Foaming steel door frames

Applications

- High-efficiency thermal insulation on façades
- Insulating and filling in roofing work
- Insulating and filling window connection joints, around window sills and shutter boxes
- Insulating and filling finished elements, wall connections, wall penetrations and cavities

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster

Advantages

- The PUFS is hardly flammable in line with the B1 test and can therefore be used between solid, mineral or metal building materials. Thus it provides the highest level of safety.
- The new high-quality safety valve prevents adhesion when being stored

horizontally or during long interruptions of work, thus guaranteeing long-lasting functionality.

- The easy dosage allows for a controlled filling and sealing, and ensures that the correct amount is used.

Certificates

- General test certificate from building authorities P-NDS04-620
- Proven joint soundproofing: of 10 and 20 mm joint width: $R_{s,w} (C; Ctr) \geq 63$ (-2;-5) dB
- French VOC-emission class A+

Functioning

- 1-component PU foam
- Building material class B1
- Foam yield of extruded foam 45 l
- Processing temperature environment: +10 °C to +25 °C (can temperature: +10 °C to +25 °C)
- Non-tacky after approx. 10 minutes
- Can be cut after approx. 40 minutes
- Cures within 5 to 8 hours
- Temperature resistant from -40 °C to +90 °C
- Layer thicknesses > 50 mm: foam in several layers and then dampen.
- Fresh foam stains can be removed immediately with fischer PU cleaner.

Technical data

1c premium gun foam PUP BS 750 B2

The one-component gun foam with proven resistance to water pressure

Sealing concrete manhole rings

Filling pipe penetrations

Applications

- To quickly fill joints between hinged manhole rings
- To seal and bind well shafts, manhole shafts, domestic sewage treatment plants and cisterns
- To insulate and fill wall penetrations, cavities, wall connections and finished elements

Advantages

- External testing of watertightness when used in connection with hinged manhole rings fulfils the requirements for a well foam.
- The special foam is ready and easy to use, and replaces the time- and work-intensive application of mortar.
- The high resistance to dilute chemicals and mineral oil, the resistance to

acids and bacteria found in soil, and the resistance to rot all guarantee a lasting function.

- The easy dosage allows for a controlled filling and sealing, and ensures that the correct amount is used.
- The new non-sticking safety valve guarantees long-lasting functionality.

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Fibre cement
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster
- Stone

Certificates

- General test certificate from building authorities P-NDS04-137
- Test for watertightness up to 0.5 bar for the adhesion of manhole rings
- Proven joint soundproofing: $R(ST,w)=61$ (-1;-3) dB in line with ISO EN 717-1
- Proven thermal conductivity: Reduces heat loss by $0.0345 \text{ W}/(\text{m}^2\text{K})$
- Based on DIN 18542, proven airtightness of $a < 0.1 \text{ m}^3/[\text{h}^* \text{m}^2(\text{daPa})^{2/3}]$
- French VOC-emission class A+

Functioning

- 1-component PU foam
- Building material class B2
- Processing temperature environment: $+5 \text{ }^\circ\text{C}$ to $+35 \text{ }^\circ\text{C}$ (can temperature: $+10 \text{ }^\circ\text{C}$ to $+30 \text{ }^\circ\text{C}$)
- Non-tacky after 8 - 12 minutes
- Bind manholes together before skin formation.
- Do not cut or spread foam coming from the hinge.
- Hardened after 80 - 100 minutes
- Temperature resistant from $-40 \text{ }^\circ\text{C}$ to $+90 \text{ }^\circ\text{C}$
- Layer thicknesses $> 50 \text{ mm}$ foam in several layers and then dampen.
- Fresh foam stains can be removed immediately with fischer PU cleaner.

PUBS 750 B2	513763 ¹⁾	750	50	beige	12

1) Dangerous goods - no express shipping possible.

1c perimeter adhesive foam PUP P 750

The economic adhesive one-component foam for perimeter insulation boards

Bonding perimeter insulation boards

Filling pipe penetrations

Applications

- Bonding expanded polystyrene panels
- Insulating and filling wall penetrations
- Foaming in electrical installations
- Filling joints and cavities in all internal constructions
- Fixing and sealing walls and ceilings

Building materials

- Concrete
- Bitumen coatings
- Anodised layer
- Gypsum plasterboard
- Wood
- Cold bitumen sheeting
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster

Advantages

- The high foam yield allows for the bonding of approx. 13 m² of wall space, and is therefore especially economical.
- The use of the can/gun system provides a time saving of approx. 30% and thus guarantees efficient work.
- The special PU foam formulation ensures the best adhesion to concrete and

- bituminous substrates, and allows for the long-term fixing of insulation boards.
- The very low level of post-expansion avoids the formation of cavities and guarantees a long-lasting insulation.
- The new non-sticking safety valve guarantees long-lasting functionality.

Certificates

- General test certificate from building authorities P-NDS04-772
- French VOC-emission class A+
- EMICODE® EC 1 Plus - very low emission

Functioning

- 1-component PU foam
- Building material class B2
- Processing temperature environment: +10 °C to +25 °C (can temperature: +5 °C to +25 °C)
- Non-tacky after approx. 10 minutes
- Can be cut after approx. 40 minutes
- Temperature resistant from -40 °C to +90 °C
- Low heat conductivity
- Apply a min. of 3 end-to-end stripes per board, vertically from bottom to top on the external wall (spacing approx. 30 cm). The bottom board should be on fixed ground as protection from later slipping. After approx. 10 minutes apply the boards onto the holding surface and press hard.
- Fresh foam stains can be removed immediately with fischer PU cleaner.

Technical data

1c perimeter adhesive foam PUP P 750					
Item	Item No.	Content per can [ml]	Max. foam yield (free foaming) [l]	Colour	Sales unit [pcs]
PUP P 750 G B2	506671 ¹⁾	750	45	concrete grey	12

1) Dangerous goods - no express shipping possible.

1c adhesive foam PUP ETICS 750

The adhesive one-component foam for ETIC systems with general technical approval

Insulation of cellar ceiling

Wall insulation

Applications

- Bonding of EPS rigid foam panels in accordance with ETAG Guideline 004/2013
- Fixing of external wall insulation, internal wall insulation and attic insulation
- Fixing of basement ceiling insulation
- Bonding of perimeter insulation panels

Advantages

- The special recipe guarantees high adhesive tensile strength for secure fixing.
- The high foam yield allows for the bonding of up to 12 m² of wall space and is therefore especially economical.
- Really low post-expansion avoids the formation of cavities between the wall and

insulation panel and guarantees a secure connection.

- The use of the can/gun system provides a time saving of approx. 30% and thus guarantees efficient work.
- The new non-sticking safety valve guarantees long-lasting functionality.

Building materials

- EPS-insulation panels
- Concrete
- Bitumen coatings
- Anodised layer
- Gypsum plasterboard
- Wood
- Cold bitumen sheeting
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster

Certificates

- Building approval for bonding EPS boards in ETIC systems
- Adhesive tensile strength values (based on ETAG guideline 004/2013, section 5.1.4.1.2)
- French VOC-emission class A+

Functioning

- 1-component PU foam
- Foam yield sufficient for up to 12 m² wall area
- Processing temperature environment: +5 °C to +25 °C (can temperature: +10 °C to +25 °C)
- Open Time approx. 10 minutes
- Can be cut after approx. 20 minutes
- Temperature resistant from -40 °C to +90 °C
- Extremely high heat insulation properties
- Shear resistance (EN 12090) 38,7 kPa
- Fresh foam stains can be removed immediately with fischer PU cleaner.
- When pressed on, an adhesive surface percentage of at least 40% must be achieved.
- Do not knock the insulation panels against the wall (this damages the foam structure).

2c premium rapid foam 2K PU 400 Plus

The high-quality 2c rapid foam for fast and secure fixation with optimized activation system

Foaming door frames

Foaming below bath tubs

Applications

- For mounting door frames made of wood, plastic and steel (DIN 18111 T4) and window frames
- Filling and insulating of cavities in walls and ceilings with insufficient moisture access
- Assembly of foamed PS moulded parts, shower trays and bathtubs (tub support assembly foam)
- Fixing insulating elements, wooden cladding, sheet metal panels, control boxes

Building materials

Bonds to all standard building materials such as:

- Concrete
- Anodised layer
- Gypsum plasterboard
- Wood
- Sand-lime brick
- Plastics (not on PE, PP, Teflon, silicone)
- Masonry
- Metals with priming coat
- Plaster

Technical data

2c premium rapid foam 2K PU 400 Plus

Item	Item No.	Content per can [ml]	Max. foam yield (free foaming) [l]	Colour	Sales unit [pcs]
2K PU 400 PLUS B2 (DE)	053081 ¹⁾	400	10	light blue	12

1) Dangerous goods - no express shipping possible.

Advantages

- The high dimensional stability certified by the independent ift Rosenheim institute provides security and saves additional costs, as time-consuming reworking of door frames is avoided.
- The newly developed activation system guarantees a 100% fail-safe opening of the inner activator container and thus avoids disturbances during hardening and thus subsequent pressing or shrinkage.
- The externally determined, very high

sound insulation value of 63 dB makes a major contribution to effective noise protection and leads to an increase in well-being.

- The non-adhesive safety valve prevents inoperability in horizontal storage and premature gas loss.
- The high shear strength of the PU foam ensures a secure and durable fastening of the door frame.

Certificates

- General test certificate from building authorities P-NDS04-666
- Evidence of dimensional stability certified by the ift Rosenheim
- Proven joint soundproofing for 10 and 20 mm joints: $R_{s,w} (C; C_{tr}) \geq 63 (-2; -5) \text{ dB}$
- French VOC emission class A+
- EMICODE® EC 1 Plus - very low emission

Functioning

- 2-component PU foam
- Building material class B2
- Foam yield of extruded foam 10 l
- Can and processing temperature: +15 °C to +25 °C (optimal: +20 °C; substrate temperature: min. +10 °C)
- Non-tacky after approx. 6 minutes
- Can be cut after approx. 10 minutes
- Cures after approx. 30 minutes
- Can be despread after 60 minutes (+20 °C)
- Temperature resistant from -40 °C to +90 °C
- Fresh foam stains can be removed immediately with fischer PU cleaner.

PUP K2 Plus

Advantages

- The light construction facilitates use on construction sites and allows for fatigue-free work.
- The impact-requiring control prevents the unintentional unscrewing of the regulating screw, and is therefore particularly user-friendly.
- The gun adapter is suitable for all standard systems and enables universal application.
- Opened cans can remain screwed onto the gun during interruptions of work without curing.

PUP M3

Advantages

- The PUP M3 meets the tough requirements of a construction site and thus offers a long lifespan.
- The ergonomic handle allows for an ideal position of centre of gravity, and therefore precise handling.
- The infinitely variable control of the foam expulsion allows for a controlled filling and insulating, and enables application-orientated work.
- Opened cans can remain screwed onto the gun during interruptions of work without curing.

PUP M4 BLACK

Advantages

- The complete PTFE coating reduces cleaning to a minimum.
- Non-return ball and basket are coated with PTFE. This prevents bonding and guarantees a long-lasting function.
- The perfect combination of the ergonomically shaped handle and trigger makes handling particularly user-friendly.
- The tubes included with the 19 cm long, tapered pistol pipe mean that it can be individually lengthened for use in the narrowest joints, thus offering a high degree of flexibility.

Technical data

PU-cleaner

Advantages

- The active components ensure a high cleaning effect, making the cleaner ideal for the safe removal of fresh PU foam.
- The gun adapter is suitable for all standard systems and enables universal application.
- The separate spray head allows for the cleaning of external surfaces, making the product extremely versatile.
- The highly active cleaner can etch sensitive surfaces (paint, dye, textiles, plastics). Thus you should always conduct preliminary tests.

Note: Avoid direct contact between the silicone and bituminous or plasticiser materials (e.g. EPDM, butyl, neoprene). The written and spoken information contained in this technical datasheet and our practical support is provided to the best of our knowledge and does not represent binding information or guarantees as described in § 443 of the German Civil Code. We recommend that you test the suitability of our products for the intended application prior to use. Due to the diverse range of applications of the individual product and the unpredictable conditions on site, we also recommend testing the adhesion prior to use.

Premium sanitary silicone DSSA

The high-quality premium sanitary silicone

Joints in sanitary areas

Sealings in the kitchen

Applications

- Corner, movement and connection joints in sanitary areas (sinks, showers, bath tubs, expansion joints between tiles etc.)
- Connection joints in the kitchen
- Window and glass sealings
- Seal welds for display cabinets and glass blocks
- Small-scale adhesions (e.g. window bars)

Building materials

- Chrome
- Stainless steel
- Anodised layer
- Enamel, Tiles
- Glass, glazed surfaces
- Wood (with primer)
- H-PVC
- Ceramics
- Polyester
- Sanitary acrylic

Advantages

- The high-quality formulation allows for easy application and smoothing, and ensures efficient work.
- The outstanding movement capacity means that DSSA is ideal for high-stress expansion joints. This guarantees long-lasting jointing.
- The very good hold on smooth surfaces

prevents damp from forming in the substrate and guarantees reliable functioning.

- The high wear resistance gives the surface a high level of protection when cleaning. Together with the long-term mold protection, an ideal jointing can be achieved that will last over the long term.

Certificates

- EN 15651 - Part 1: F-EXT-INT-CC (25LM)
- EN 15651 - Part 2: G-CC (25LM)
- EN 15651 - Part 3: S (XS1)
- French VOC-emission class A+

Functioning

- Chemical base: 1-component silicone acetate
- Permanently elastic
- With fungicide
- Skin formation time: approx. 10 minutes
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -40 °C to +180 °C
- Good chemical resistance
- Very good resistance to weather, ageing and UV
- Compatible with paint
- Not paintable
- Free of MDI and solvents
- Selection table for substrates - refer to page 570

Sanitary silicone DSSI

The standard sanitary silicone

Joints in sanitary areas

Wash basins

Applications

- Joints in sinks and toilets
- Expansion joints between floor and wall tiles
- Joints around enamel and plastic showers and bath tubs
- Connection joints between timber and tiles
- Connection joints in the kitchen
- Seal welds for display cabinets and glass blocks
- Glazing wood and aluminium windows

Advantages

- The 20% elasticity means that DSSI is ideal for expansion and connection joints. This guarantees long-lasting jointing.
- The very good hold on smooth surfaces, e.g. tiles, prevents damp forming in

the substrate and guarantees reliable functioning.

- The fungicidal properties ensure a clean look over the long term.

Building materials

- Stainless steel
- Anodised layer
- Epoxy
- Tiles
- Glazed surfaces
- Glass
- H-PVC
- Ceramics
- Painted wood
- Polyester

Certificates

- EN 15651 - Part 1: F EXT-INT-CC
- EN 15651 - Part 3: S

Functioning

- Chemical base: 1-component silicone acetate
- Permanently elastic
- With fungicide
- Skin formation time: approx. 10 to 15 minutes
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -40 °C to +150 °C
- Shore-A hardness 25
- 100% Modulus 0.4 N/mm²
- Elongation at break 450%
- Good chemical resistance
- Very good resistance to weather, ageing and UV
- Not paintable
- Selection table for substrates - refer to page 570

Multi-silicone DMS

The silicone sealant with an acetate base for internal and external applications

Joints in sanitary areas

Sealings in the kitchen

Applications

- Bathrooms, showers and toilets
- Connection joints to sinks
- Expansion joints between tiles
- Connection joints in the kitchen
- Joints between timber and tiles
- Seal welds for display cabinets and glass blocks

Building materials

- Stainless steel
- Anodised layer
- Epoxy
- Tiles
- Glazed surfaces
- Glass
- H-PVC
- Ceramics
- Painted wood
- Polyester

Advantages

- Thanks to the practical elasticity of 20%, DMS is ideally suited to connection joints with expansion. This guarantees long-lasting jointing.
- The fungicidal properties ensure a clean look over the long term.
- The very good hold on smooth surfaces

Certificates

- EN 15651 - Part 1: F EXT-INT-CC
- EN 15651 - Part 3: S

prevents damp from forming in the substrate and guarantees reliable functioning.

- The good resistance to UV, weathering and ageing means that DMS can be used both indoors and outdoors, and offers a high level of security over the long term.

Functioning

- Chemical base: 1-component silicone acetate
- Permanently elastic
- With fungicide
- Skin formation time: approx. 10 to 15 minutes
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -40 °C to +150 °C
- Shore-A hardness 25
- 100% Modulus 0.4 N/mm²
- Elongation at break 450%
- Very good resistance to weather, ageing and UV
- Not paintable
- Selection table for substrates - refer to page 570

Premium high temperature silicone DHS

The silicone sealant for high temperature requirements

Sealing fireplaces

Sealing cookers

Applications

- Sealing of joints around cookers, ovens and fireplaces
- Sealing of joints around boilers and industrial furnaces
- Sealing of joints around pipes and channels subjected to high temperatures
- Sealing of ventilation grilles
- Sealing of air conditioning units

Advantages

- The high temperature resistance of up to +300°C means that DHS can be used for joints with increased thermal load.
- Meanwhile, the high resistance to chemicals also allows for use in areas subjected to chemical loads, thus offering a high level of application safety.
- The very good adhesion to smooth

surfaces allows for the components to be completely sealed. This allows for reliable functioning.

- DHS is easy to apply and smooth out. This allows for efficient work, and helps to guarantee a simple and time-saving application.

Functioning

- Chemical base: 1-component silicone acetate
- Permanently elastic
- Skin formation time: approx. 10 to 15 minutes
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -40 °C to +300 °C
- Shore-A hardness 25
- Very good resistance to chemicals
- Very good resistance to weather, ageing and UV
- Not paintable
- Free of MDI and solvents
- Selection table for substrates - refer to page 570

DHS RB (DE/EN)	053125	reddish brown	310	12

Premium construction silicone DBSA

The low-odour premium construction silicone with high adhesive spectrum

External connection joints

Fixing mirrors

Applications

- Connection and expansion joints in the construction industry (e.g. windows, doors, façades, light domes)
- Window glazing
- Movement and connection joints in kitchens, sanitary areas and installations
- Fixing mirrors (transparent version)
- Sealing machines, containers and building apparatus

Building materials

- Concrete
- Chrome
- Stainless steel
- Anodised layer
- Enamel, Tiles, Ceramics
- Glass, glazed surfaces
- Wood (with primer)
- H-PVC
- Copper, brass
- Masonry
- PMMA, PC, Polyester
- Steel
- Zinc

Advantages

- The high-quality, neutral silicone sealant with a very low volume shrinkage is suitable for demanding applications in construction and the industrial sector, and guarantees a high degree of functional safety.
- DBSA is low-odour and is therefore ideal

- for use in confined spaces.
- The silicone is easy to apply and smooth out, thus allowing for efficient work and a simple and time-saving jointing.
- The high wear resistance gives the surface a high level of protection when cleaning and thus ensures a perfect look over a long period.

Certificates

- EN 15651 - Part 1: F-EXT-INT-CC (25LM)
- EN 15651 - Part 2: G-CC (25LM)
- EN 15651 - Part 3: S (XS1)
- French VOC-emission class A+

Functioning

- Chemical base: 1-component silicone neutral alkoxy
- Fulfils DIN EN ISO 11600 F+G 25
- Permanently elastic
- Low-odour
- With fungicide
- Skin formation time: 10 to 15 min
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -40 °C to +150 °C
- Shore-A hardness approx. 25
- Permitted overall deformation: 25%
- Non-corrosive
- Very good resistance to weather, ageing and UV
- Compatible with paint
- Not paintable
- Resistant to wear and streak-free
- Selection table for substrates - refer to page 570

Roof and wall silicone DBSI

The versatile construction silicone

External connection joints

Joints between buildings

Applications

- Connection and expansion joints in the construction industry (e.g. windows, doors, façades, light domes)
- Connection joints on windows and doors
- Sealing façades, curtain walling panels and metal structures
- Movement and connection joints in kitchens, sanitary areas and installations

Building materials

- Concrete
- Chrome
- Stainless steel
- Anodised layer
- Enamel
- Epoxy
- Tiles
- Glass, glazed surfaces
- Wood (with primer)
- H-PVC
- Ceramics
- Copper
- Masonry
- Brass
- Polyester
- Steel
- Zinc

Advantages

- The neutral silicone sealant is suitable for various applications in construction and the industrial sector, and thus offers a high level of flexibility.
- The high movement capacity means that DBSI is ideal for expansion joints. This

guarantees long-lasting jointing.

- DBSI is non-corrosive and is therefore well suited to copper and zinc-plated surfaces. Thus it can be used without problems in the metal processing industry.

12

Certificates

- EN 15651 - Part 1: F-EXT-INT-CC
- EN 15651 - Part 2: G-CC
- EN 15651 - Part 3: S

Functioning

- Chemical base: 1-component silicone neutral oxime
- Permanently elastic
- With fungicide
- Skin formation time: 10 to 15 minutes
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -40 °C to +180 °C
- Shore-A hardness 18±3
- Non-corrosive
- Very good resistance to weather, ageing and UV
- Compatible with paint
- Not paintable
- Selection table for substrates - refer to page 570

Premium silicone 1 For All DNS

The high performance silicone even for marble and natural stone

Joints on natural stone panels

Joints on tiles and natural stone and marble panels

Applications

- Sealing and jointing marble and natural stone for internal and external use
- Joints in sanitary areas
- Joints in façade construction
- Joints in the glazing
- Joints in the flooring
- Corner joints in floors and walls
- Movement-compensating adhesion of natural stone onto metal structures (e.g. stair treads)

Advantages

- The specially adapted formulation prevents edge soiling and gives a lasting clean look, particularly for natural stone and marble.
- With 10 years warranty on UV-, weather- and aging resistance for maximum durability.
- The outstanding movement capacity

- means that DNS is ideal for highstress expansion joints. This guarantees long-lasting jointing.
- Fungicidal agent prevents mildew formation and ensures a clean look over the long term.

Building materials

- Marble
- Natural stone (e.g. granite, porphyry, quartzite, sandstone)

Also suitable for:

- Concrete
- Stainless steel
- Anodised layer
- Tiles, Ceramics
- Glass
- Wood (with primer)
- H-PVC
- Copper
- Masonry
- Sanitary acrylic
- Steel
- Zinc

Certificates

- EN 15651 - Part 1: F-EXT-INT-CC (25LM)
- EN 15651 - Part 2: G-CC (25LM)
- EN 15651 - Part 3: S (XS1)
- EN 15651 - Part 4: PW-EXT-INT-CC (25LM)
- French VOC-emission class A+

Functioning

- Chemical base: 1-component silicone neutral curing
- Permanently elastic
- Low-odour
- With fungicide
- Skin formation time approx. 15 minutes
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -40 °C to +180 °C
- Shore-A hardness 25
- Non-corrosive
- Good chemical resistance
- Very good resistance to weather, ageing and UV
- Compatible with paint
- Not paintable
- Selection table for substrates - refer to page 570

Premium B1 silicone DFS

The hardly flammable silicone sealant

Joints on fire protection doors

Sealings in public buildings

Applications

- Sealing connection and expansion joints that are required to have a fire-resistant effect against the spreading of fire, water, smoke and poisonous fumes
- Sealing components that have increased requirements concerning their properties in the case of fire

Building materials

- Concrete
- Chrome
- Stainless steel
- Anodised layer
- Enamel
- Tiles
- Glass, glazed surfaces
- Ceramics
- Copper, brass
- Masonry
- Polyester
- Steel
- Zinc

Advantages

- The good fire-inhibiting properties provide maximum safety for the sealing of solid, mineral or metal building materials.
- Non-corrosive, thus can be used on aluminium, copper and zinc-plated surfaces. This guarantees problem-free use within

- the metal processing industry.
- Due to the audited, high 25% elasticity, DFS is particularly suitable for joints subjected to high stress. This guarantees a permanent seal.

12

Certificates

- EN 15651 - Part 1: F-EXT-INT-CC (25LM)
- EN 15651 - Part 2: G-CC (25LM)
- EN 15651 - Part 3: S (XS1)

Functioning

- Chemical base: 1-component silicone neutral
- Hardly flammable material (building material class DIN 4102-B1) in line with DIN 4102-1
- Permanently elastic
- Shore-A hardness 30±5
- Skin formation time: 10 to 15 minutes
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -40 °C to +150 °C
- Non-corrosive
- Very good resistance to weather, ageing and UV
- Compatible with paint
- Not paintable
- Selection table for substrates - refer to page 570

DFS GR (DE/EN)	053131	grey	310	12

Premium painting acrylic DMA

Quick paintable sealant with maximum security against cracks and discolourations

Wall connection joints

Internal expansion joints

Applications

- For internal and external application
- For sealing joints between wooden and metal window frames and concrete/ masonry
- Joints between walls and ceilings, steps and walls, concrete and ceiling elements and skirting
- Connection joints for shutter boxes and window sills
- Joints in dry and internal construction
- Renovation work (split jointing)

Building materials

- Concrete
- Anodised layer
- Gypsum
- Gypsum plasterboard
- Wood
- H-PVC
- Sand-lime brick
- Clinker brick
- Masonry
- Polystyrene
- Aerated concrete
- Plaster
- Brick

Advantages

- The sealant can be painted after already one hour, allowing subsequent painting work to start more quickly.
- The further-developed DMA formulation suppresses paint cracking, thus eliminating the need for time-consuming rework.
- The really good paint compatibility ensures the great adhesion of com-

- mercially available paints to the sealant and prevents the discolouration of the paint layer. This guarantees a good, even appearance.
- The water-based acrylate sealant has a neutral odour and is free from phthalate plasticisers, making it ideal for use in confined spaces.

Prüfzeugnis

- EN 15651-1:2012: Type F -EXT-INT (class 7,5P)
- GEV-EMICODE EC1 PLUS - very low emission
- French VOC-emission class A+

Functioning

- Chemical base: 1-component dispersion acrylic
- Elasto-plastic
- Low-odour
- Skin formation time: approx. 10 minutes
- Processing temperature: +5 °C to +40 °C
- Adheres on moist substrates
- Practically no shrinkage
- Temperature resistance: -20 °C to +75 °C
- Non-corrosive
- Very good resistance to weather, ageing and UV
- Compatible with paint
- Can be painted and plastered
- Free of silicone, MDI and solvents
- Selection table for substrates - refer to page 570

Technical data

Premium painting acrylic DMA				
Item	Item No.	Colour	Contents [ml]	Sales unit [pcs]
DMA W (DE/EN)	512186	pure white	310	12

Premium structured acrylic DSA

The structured acrylic sealant for plastered walls

Joints in the roof area

Closing external masonry cracks

Applications

- Filler paste to repair coarse surfaces on internal and external walls
- Connection joints with low movement
- Joints in dry and internal construction
- Joints between walls and ceilings
- Joints on window and shutter connections

Building materials

- Concrete
- Anodised layer
- Gypsum
- Gypsum plasterboard
- Wood
- H-PVC
- Sand-lime brick
- Clinker brick
- Masonry
- Polystyrene
- Aerated concrete
- Plaster
- Brick

Advantages

- The pitted structure is ideal for coarse surfaces, and ensures a perfect appearance, e.g. on rough plaster.
- The sealant can be painted and plastered and allows for an outstanding hold of standard paints/plasters on the

Certificates

- EN 15651 - Part 1: F-EXT-INT

sealant, thus guaranteeing a non-critical post-treatment.

- The good resistance to UV, weather and ageing allows for use both indoors and outdoors. This guarantees versatile and long-lasting jointing.

Functioning

- Chemical base: 1-component dispersion acrylic
- Elasto-plastic
- Low-odour
- Skin formation time: approx. 5 minutes
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -20 °C to +75 °C (rain-resistant once cured)
- Non-corrosive
- Very good resistance to weather, ageing and UV
- Compatible with paint
- Paintable
- Frost-protected in the cartridge
- Free of silicone, MDI and solvents
- Selection table for substrates - refer to page 570

Acrylic sealant DA

The acrylic sealant for internal joints

Sealing door frames

Closing internal masonry cracks

Applications

- Fractures in masonry and other solid building materials in internal areas
- Connection joints with low movement
- Joints in window sill connections
- Connection joints inside buildings between windows, doors, stairs, ceilings and walls

Advantages

- The good hold on absorbent substrates guarantees a secure sealing and thus allows for a reliable and economic application.
- The sealant can be painted and plastered and allows for a good hold of standard

- paints/plasters on the sealant, thus guaranteeing a non-critical post-treatment.
- The water-based acrylate sealant has a neutral odour and is therefore ideal for use in confined spaces.

Building materials

- Concrete
- Anodised layer
- Gypsum
- Gypsum plasterboard
- Wood
- H-PVC
- Sand-lime brick
- Clinker brick
- Masonry
- Aerated concrete
- Plaster
- Brick

Certificates

- EN 15651 - Part 1: F-EXT-INT

Functioning

- Chemical base: 1-component dispersion acrylic
- Elasto-plastic
- Low-odour
- Skin formation time: approx. 20 minutes
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -20 °C to +75 °C
- Non-corrosive
- Compatible with paint
- Can be painted and plastered
- Frost-protected in the cartridge
- Free of silicone, MDI and solvents
- Selection table for substrates - refer to page 570

Repair mortar DEC

The ready-to-use, extrudable joint mortar for the long-lasting closing of masonry joints

Masonry joints

Wall breakthrough

Applications

- Repairing masonry joints
- Closing masonry cracks
- Repairing chipped edges
- Closing drill holes in facing masonry during repair work
- General repair work (e.g. drill holes with cracked edges)
- For a better reusability, to close opened cartridges with adhesive tape

Building materials

- Concrete
- Pumice
- Fibre cement
- Gypsum
- Wooden materials
- Sand-lime brick
- Ceramics
- Clinker brick
- Masonry
- Aerated concrete
- Plaster
- Cement
- Brick

Advantages

- The ready-to-use, sprayable joint mortar means that there is no need to add water or carry out time-consuming pre-mixing work. It enables clean, purposeful work. This means that you avoid dirtying surrounding areas and wasting material.
- Good adhesion even on slightly damp

- substrates practically allows for all-weather work and prevents forced interruptions.
- The structure of the high-quality water-based polymer has been perfectly designed with the visual appearance of the mortar in mind. This ensures a discreet joint and perfect appearance.

12

Functioning

- Chemical base: 1C polymer dispersion
- Plastic
- Consistency: Firm
- Practically odour-free
- Skin formation time: Approx. 10 minutes.
- Processing temperature: +5 °C to +40 °C (not below +5 °C)
- Temperature resistance up to -30 °C (fully cured)
- Weather-proof after approx. 24 hours.
- Very good resistance to UV, weather and ageing
- Paintable
- Frost-protected in the cartridge
- Free of silicone, MDI and solvents
- Not recommended for caulking guns with a transmission ratio of less than 10:1 (e.g. KPM1)
- Selection table for substrates - refer to page 570

Premium all-weather sealant DDK

The permanently elastic joint sealant with a strong hold on all substrates

Chimney flashings

Sealing gutters

Applications

- Sealing of roofing membranes
- Grouting roof penetrations such as chimneys or light domes, as well as edge connections
- Sealing of metal and plastic gutters
- Sealings around antennas and ventilation ducts
- Sealing of chimney flashings
- Sealant for metal structures

Advantages

- Thanks to the high elasticity of 25%, DDK is ideally suited to high-stress joints. This guarantees long-lasting jointing.
- DDK holds without a base coat, including on moist and bituminous substrates, and is therefore suitable for all applications in the roofing area. For a high degree of

economy.

- The immediate rain resistance allows for external application in all weather conditions, thus avoiding interruption of work.
- DDK is non-corrosive, and thus can be used on aluminium, copper and zinc-plated surfaces. This offers maximum flexibility.

Building materials

- Concrete
- Bitumen sheeting
- Roofing felt
- Stainless steel
- Wood
- Clinker brick
- Copper
- Masonry
- Metal
- Brick
- Zinc

Functioning

- Chemical base: 1-component synthetic rubber
- Permanently elastic
- Highly transparent formulation
- Skin formation time: 15 - 20 minutes
- Processing temperature: +5 °C to +40 °C
- Temperature resistance: -25 °C to +100 °C
- Permitted overall deformation: 25%
- Allows for emergency roof repairs
- Non-corrosive
- Very good resistance to weather, ageing and UV
- Compatible with paint
- Paintable
- Frost-protected in the cartridge
- Selection table for substrates - refer to page 570

Technical data

Roof sealing compound DD

The special sealant to fill joints between bitumen sheeting

Sealings around skylights

Sealings around roofs with bitumen sheeting

Applications

- Sealing roofing membranes and roofing felt
- Bonding bitumen shingle
- Grouting roof penetrations such as chimneys or light domes, as well as edge connections
- Sealing of metal and plastic gutters
- Sealings around antennas and ventilation ducts
- Suitable for emergency repairs

Building materials

- Concrete
- Bitumen sheeting
- Roofing felt
- Stainless steel
- Wood
- Clinker brick
- Copper
- Plastics
- Masonry
- Metal
- Brick
- Zinc
- Polystyrene

Technical data

Roof sealing compound DD				
Item	Item No.	Colour	Contents [ml]	Sales unit [pcs]
DD SW (DE/EN)	053127 ¹⁾	black	310	12

1) Dangerous goods - no express shipping possible.

Advantages

- The special bitumen-based formulation seals roofing membranes and roofing felt securely. This guarantees long-lasting functionality.
- DD also holds to moist substrates without a base layer. This makes application

- largely independent of the weather and thus helps to avoid interruption of work.
- DD is non-corrosive, and thus can be used on aluminium, copper, zinc-plated surfaces and polystyrene. This offers maximum flexibility.

Functioning

- Chemical base: 1-component bitumen
- Skin formation time approx. 30 minutes
- Processing temperature: +5 °C to +45 °C
- Temperature resistance: -20 °C to +80 °C
- Hardening time: 1 to 2 mm / d
- Max. movement absorption 5%
- Non-corrosive
- Selection table for substrates - refer to page 570

KP M1

Advantages

- The handy, robust solid metal construction for standard cartridges up to 310 ml bears up against requirements on the construction site and, as such, is also suitable for professional use.
- The continuous in-feed allows for a precise dosage, making it easy to use.
- The slim shape of the device allows for an exact application, even in difficult to reach spots, thus offering a high level of flexibility

KP M3

Advantages

- The 18:1 transmission ratio makes extrusion rapid and energy-efficient even in the case of highly viscous materials, thus guaranteeing stress-free work.
- The robust design with the hardened twice drive blocks and the hardened push rod meets the tough requirements of a construction site and thus offers a long lifespan.
- The electro-welded cartridge shell is freely rotatable.
- Due to the accessible cartridge, it is possible to align the extrusion nozzle perfectly in place and guarantee application-orientated work.
- The equipment with a ladder hook facilitates the retraction of the push rod and offers a convenient possibility of depositing during work interruptions.

KP M2 Plus

Advantages

- The 18:1 transmission ratio makes extrusion rapid and energy-efficient even in the case of highly viscous materials, thus guaranteeing stress-free work.
- The robust design with the special, hardened drive block meets the tough requirements of a construction site and thus offers a long lifespan.
- Due to the accessible cartridge, it is possible to align the extrusion nozzle perfectly in place and guarantee application-orientated work.

KP M3	541441	18:1	1
KP M2 Plus	053117	18:1	1

KP M600

Advantages

- The 18:1 transmission ratio makes extrusion rapid and energy-efficient even in the case of highly viscous materials, thus guaranteeing stressfree work.
- The robust design with the hardened push rod with anti-slip effect withstands the tough requirements of a construction site and thus offers a long lifespan.
- The equipment with a ladder hook facilitates the retraction of the push rod and offers a convenient possibility of depositing during work interruptions.
- Automatic tension remove (with on / off function) prevents run after.
- 2 different pusher plates (plastic for tubular bags & metal for cartridges) enable flexible use.

Zinc spray FTC-ZS

Fast-drying surface and corrosion protection with outstanding long-term effect for metals

Column bases

Metal stairs

Applications

- For all metals that need corrosion protection
- Rust protection base layer for surfaces threatened by water and weather
- For the coating of drilling and cutting points as well as welded joints
- Conductive interlayer for spot welding
- Repairing damaged zinc coatings

Building materials

- All iron and steel surfaces
- Blank laminations

Advantages

- In the salt spray test in line with DIN 50021, coated metal parts displayed no corrosion, even after 500 hours.
- The high proportion of zinc in the dry film provides secure protection to all metal surfaces that are permanently exposed to the elements.
- Thanks to the adhesive layer of corro-

sion protection and the fact that it can be painted over, it is also ideal as a high-quality base layer.

- The high resistance to cracking and flaking of a metal base material was confirmed by the mandrel flex test in line with DIN EN ISO 1519 (without damage).

Functioning

- Dark-grey colour (similar to RAL 7042)
- Metal proportion of over 92% in dry film
- Shake can well for approx. 3 minutes
- Apply at a distance of 20–30 cm in a cross coat
- Surface dust-dry after just approx. 8 minutes
- Fully hardened within 24 hours
- Smooth, non-porous film
- Abrasion-resistant
- Excellent corrosion protection with long-term effect
- Heat-resistant up to approx. 500 °C
- Electroconductive and suitable for spot welding
- Ideal processing temperature of 16 °C to 25 °C

Technical data

Zinc spray FTC-ZS

FTC-ZS (EN/FR/ES/PT)	509242 ¹⁾	400	12

¹⁾ Dangerous goods - no express shipping possible.

Zinc-alu spray FTC-ZA

Ideal for repairing damaged zinc coatings using colour-matching corrosion protection.

Ventilation systems

Ladders

Applications

- For post-galvanising and repairing damaged areas of galvanised parts, drilling and cutting points and welded joints
- Repairing damaged zinc coatings
- Climate control and ventilation technology
- Guard rails
- Metal constructions
- Sheet metal coverings

Building materials

- All iron and steel surfaces
- Hot-dip galvanised surfaces following drilling, ironwork or welding
- Non-ferrous heavy metal

Advantages

- Zinc-alu spray represents a subtle repair to damaged hot-dip galvanised areas thanks to its colour matching with the hot-dip galvanisation.
- Thanks to the excellent holding properties on blank metal, it guarantees a

- lasting connection to the base material.
- The fast-drying Zinc-alu spray guarantees good, weatherproof corrosion protection and, as such, is suitable for use both indoors and out.

12

Functioning

- Silver-grey colour (similar to RAL 9006) with high gloss level
- Shake can well for approx. 2 minutes
- Apply at a distance of 25–30 cm in a cross coat
- Surface dust-dry after just approx. 8 minutes
- Touch-dry after 20–25 minutes
- Fully hardened within 24 hours
- Smooth, non-porous film
- High abrasion resistance
- Long-term heat resistance up to approx. 200 °C (briefly up to 300 °C)
- Ideal processing temperature of 16 °C to 25 °C

Adhesives

Assembly adhesive MK	596	
Power adhesive express KK	597	
Multi Adhesive & Sealant KD	598	
Multi Adhesive & Sealant CRYSTAL KDC	600	
High Tack Flex-Adhesive HTM	601	

Assembly adhesive MK

The building adhesive for interior areas with high initial adhesion

Skirting

Timber constructions

Applications

- Skirting
- Timber sub-structures
- Décorative, acoustic and insulation panels
- Cable ducts
- Window sills
- Tiles
- Door signs

Advantages

- The extremely high initial adhesion of 200 kg/m² makes it possible to attach lots of components without the need for additional fixings, and thus reduces the amount of time required.
- The components can be adjusted for a few minutes after they have been attached. This makes installation easier.
- The acrylate adhesive has a neutral odour and is therefore ideal for use in confined spaces.
- The special recipe makes it compatible with foamed polystyrene, e.g. Styro-foam®. MK is, therefore, suitable for a broad range of applications.

Building materials

- Concrete
- Pumice
- Fibre cement
- Gypsum
- Gypsum plasterboard
- Wood
- H-PVC
- Sand-lime brick
- Clinker brick
- Masonry
- Metal
- Polystyrene hard foam
- Aerated concrete
- Plaster
- Brick

Certificates

- EMICODE® EC 1 Plus - very low emission
- French VOC-emission class A+

Function / assembly

- Chemical base: One-component acrylate dispersion
- Creme white in colour
- Processing temperature +10 °C to +30 °C
- Setting time approx. 15 minutes
- Very high initial adhesion of 200 kg/m²
- Fully functional after 24 to 48 hours
- High ultimate strength (up to 22 kg/cm² for wood to wood)
- Temperature resistance -20 °C to +60 °C
- Non-drip (suitable for use on ceilings)
- Addresses uneven surfaces
- At least one of the components to be bonded must be absorbent.
- Reclosable nozzle
- Free from solvents, silicone and MDI
- Extrude with silicone application gun

Technical data

Assembly adhesive MK						
Item	Item No.	Contents [ml]	Contents [g]	Type of packaging	Colour	Sales unit [pcs]
MK WHITE 310ML (DE/EN)	053128	310	400	Cartridge	white	12

Power adhesive express KK

The building adhesive for extremely fast and water-resistant bond with a high final strength

Capstones

Bonding in interior construction

Applications

- Gluing timber sub-structures
- Stair construction and stair renovations
- Laminate cladding
- Skirting boards
- Décorative, acoustic and insulation panels
- Professional modelling
- Door signs
- Cable ducts
- General repair and installation mortar

Advantages

- The polyurethane adhesive is resistant to moisture and thus can be used in exterior areas.
- The extremely quick hardening shortens the pressing and joining times. Thus subsequent work can be completed more quickly.
- The optimised recipe achieves a high adhesion, including in the case of high temperatures, for high security.
- The special recipe makes it compatible with foamed polystyrene, e.g. Styro-foam®. Thus, KK is suitable for a broad range of applications.

13

Building materials

- ABS
- Concrete
- Pumice
- Anodised layer
- Fibre cement
- Gypsum
- Gypsum plasterboard
- Wooden materials
- H-PVC
- Sand-lime brick
- Ceramics
- Clinker brick
- Masonry
- Metal
- Natural stone
- Polystyrene hard foam
- Aerated concrete
- Plaster
- Brick

Certificates

- According to the requirements of DIN EN 204-D4 to weathering resistant bondings of wood and derived wood products
- According to the requirements of DIN EN 14257 (Watt 91) to temperature-resistant bondings of wood and derived wood products
- Conform to LEED® IEQ-credits 4.1 (Indoor Environmental Quality) adhesives and sealants
- EMICODE® EC 1 Plus - very low emission

Function / assembly

- Chemical base: One-component PUR adhesive
- Beige in colour
- Processing temperature 0 °C to +35 °C
- Setting time approx. 3 minutes
- Fully functional after approx. 10 minutes (for invisible joints)
- High final strength of > 10 N/mm² (> 100 kg/cm²)
- Temperature resistance -40 °C to +110 °C
- Non-drip (suitable for use on ceilings)
- Lightly foaming / bridges gaps
- Assembly parts have to be fixed until functional strength has been reached
- Reclosable nozzle
- Free from solvents and silicone
- Extrude with silicone application gun

Multi Adhesive & Sealant KD

The flexible sealant & adhesive for indoors and outdoors with adhesive strength even on wet surfaces

Sheet metal coverings

Bonding and sealing of mirrors

Applications

Stress-compensating bonding and sealing of:

- For airtight sealing applications
- Standard mirrors
- Vibrating constructions
- Metal profiles
- Suitable for use in HVAC systems according to VDI 6022, Sheet 1
- Joints and seams in ventilated constructions
- Insulation material, ledges, panels and cladding
- Kitchens and built-in furniture
- Stair treads and window sills
- Floor joints, connection joints in car body, vehicle construction, metal construction and ship building

Advantages

- The extremely high initial adhesion of 185 kg/m² makes it possible to attach lots of components without the need for additional fixing, and thus reduces the amount of time required.
- The MS polymer® allows for an elastic adhesion for vibration-dampening and stress-compensating connections for demanding applications.
- KD is almost odour-free and therefore particularly suitable for closed rooms.
- Non-corrosive, thus can be used on copper and zinc plated surfaces for maximum flexibility in application.

Building materials

- ABS
- Concrete
- Pumice
- Gypsum plasterboard
- Glass
- Wooden materials
- H-PVC
- Ceramics
- Copper
- Masonry, clinker brick
- Metals
- Polycarbonate and PMMA
- Polystyrene hard foam
- Aerated concrete
- Plaster
- Brick

Characteristics

- EN 15651 - Part 1: F EXT-INT-CC (25HM)
- EN 15651 - Part 3: S (XS3)
- EN 15651 - Part 4: PW-EXT-INT-CC (25HM)
- DIN EN ISO 846 (Tested resistance to mould and bacteria)
- EMICODE® EC 1 Plus - very low emission
- French VOC-emission class A+
- ISEGA (Declaration of no objection: Tested for short-term contact with food)
- M1 (Emission class for building materials)

Function / assembly

- Chemical base: One-component hybrid polymer
- Processing temperature +5 °C to +40 °C
- Setting time approx. 5 minutes
- High initial adhesion of 185 kg/m²
- Curing: approx. 3 mm per day
- High elasticity of 25 %
- Shore A 52
- Temperature resistance: -40 °C to +90 °C
- Also bonds on a moist base material
- Prevents mould build-up, even without additional ingredients
- Suitable for bonding non-absorbent components (see TDS)
- Can be painted (see TDS)
- Free from solvents and silicone
- Waterproof and Sea water resistant
- Very good resistance to weather, age and UV

Technical data

Multi Adhesive & Sealant CRYSTAL KDC

The crystal clear multi adhesive for discreet adhesive and sealant joints for interior and exterior use.

Bonding and sealing aluminium profiles

For invisible glued and sealed joints

Applications

Stress-compensating bonding and sealing of:

- Glass and other transparent materials, preferably in interior areas
- Insulation material, ledges, panels and cladding
- Kitchens and built-in furniture
- Constructions in timber, bodywork, metal, container and shipbuilding industries

Advantages

- The crystal clear formula is perfect for discreet adhesion and sealing and guarantees the optimum appearance.
- The high initial adhesion of 175 kg/m² allows many components to be attached without additional fixing.
- Thanks to the high elasticity, KDC crystal clear is also ideally suited for high-stress expansion joints and guarantees perma-

- nent sealing at all times.
- Non-corrosive and non bleeding, thus can be used on copper and zinc plated surfaces as well as natural stone for maximum flexibility in application.
- KDC crystal clear is almost odour-free and therefore particularly suitable for closed rooms.

Building materials

- ABS
- Concrete
- Stainless steel
- Anodised layer
- Tiles
- Glass, glazed surfaces
- Wooden materials
- H-PVC
- Ceramics
- Copper, brass
- Masonry, clinker brick
- Metals
- Natural stone
- Polycarbonate and PMMA
- Polystyrene hard foam
- Steel
- Brick
- Zinc

Certificates

- EN 15651 - Part 1: F-EXT-INT (12,5P)
- EN 15651 - Part 3: S (S1)
- EMICODE® EC 1 Plus - very low emission
- French VOC-emission class A+

Functioning

- Chemical Base: One-component hybrid polymer
- Very easy to apply
- Prevents the formation of mould, even without additional active substances
- Skin formation time: approx. 10 minutes
- High initial adhesion of 175 kg/m²
- Fast curing rate up to 4,5 mm/24h
- Processing temperature: +5 °C to +40 °C
- High elasticity of 20%
- Shore A 40 ± 5
- Also bonds on a moist base material
- Temperature resistance: -40 °C to +110 °C
- Compatible with paint; paintable
- Free from solvents, isocyanat, silicone and phthalate

High Tack Flex-Adhesive HTM

Flexible high-performance adhesive with very high initial adhesion even on natural stone

Bonding of wall cladding

Bonding of mirrors

Applications

Stress compensating bonding of:

- Standard mirrors
- Vibrating constructions
- Metal profiles
- Seams in ventilation construction
- Insulation material, ledges, panels and cladding
- Kitchens and built-in furniture
- Stair treads and window sills
- Different types of stone
- Also of non-absorbent materials (see technical data sheet)
- A wide variety of materials in container, body, metal, ship and vehicle construction

Building materials

- ABS
- Concrete
- Stainless steel
- Anodised layer
- Natural stone, marble, granite
- Glass, glazed surfaces
- Wooden materials
- H-PVC
- Ceramics
- Copper, brass
- Masonry, clinker brick, tiles
- Metals
- Polycarbonate and PMMA
- Polystyrene hard foam
- HPL panels
- Brick
- Zinc

Advantages

- The extremely high initial adhesion makes it possible to attach lots of components without the need for additional fixings, and thus reduces the amount of time required.
- The high final tensile strength of 2.2 N/mm² guarantees really safe glued connections.

- The MS Polymer® enables elastic bonding for vibration-dampening and stress-compensating connections in challenging applications.
- HTM is practically odourless and is therefore ideal for use in confined spaces.
- It is non-corrosive and can therefore be used on aluminium, copper and zinc-plated surfaces, making it particularly flexible.

13

Test certificate

- EMICODE EC 1 Plus - very low emission
- French VOC emission class A+

Functionality

- Chemical base: One-component hybrid polymer
- Colour: White
- Processing temperature +5 °C to +40 °C
- Processing time of around 10 minutes
- Hardening time of 2-3 mm/24 h
- Extremely high initial adhesion > 290 kg/m²
- Shore A 56
- Temperature resistance: -40 °C to +90 °C
- Adhesive, even on a damp base
- Suitable for bonding non-absorbent components (see TDS)
- Can be painted (see TDS)
- Free from solvents, MDI and silicone
- Very good resistance to weather, ageing and UV

Hammer drill bit Quattric II

The expert for the best performance in reinforced concrete

Applications

To create approval-compliant drill holes in:

- Reinforced concrete
- Concrete
- Solid brick
- Sand-lime brick

Also suitable for:

- Natural stone

Advantages

- Carbide head (up to \varnothing 10 mm) for long service life.
- Power shoulders for improved breakup performance in concrete.
- Massive main cutting edges for quick drilling progress.
- Reinforcement chamfers prevent jamming in the reinforcement.
- Centring tip for simple positioning.
- Wear mark for simple recognition of wear limit in accordance with PGM.
- Two-piece spiral for quick drilling progress and increased service life.

Hammer drill bit SDS Plus II Pointer

The two-flute cutter is setting new standards when it comes to drilling speed

Applications

To create approval-compliant drill holes in:

- Concrete
- Solid brick
- Sand-lime brick

Also suitable for:

- Natural stone

Advantages

- The optimised drill bit geometry enables fast drilling progress, reduced wear and less effort.
- The centring tip allows easy and precise drilling and prevents slipping on smooth surfaces.
- The “Power Breakers” on the drill bit head have a “destructive effect”. They create micro-cracks in the material and achieve a noticeably improved drilling speed.
- The larger reinforcement chamfers (+35%) guarantee that the drill acts in the best possible way when it hits concrete

reinforcements. This considerably reduces the risk of problems caused by drill jamming.

- The new Vario KVS spiral offers further advantages: The narrow crown width behind the drill bit head reduces friction and ensures stronger energy transfer during percussion drilling. The improved helix enables ideal transport of the drill residues. The spiral shape increases the stability and thus also the break resistance.

Masonry drill bit Pointer M

The perfect drill bit for all perforated building materials

Applications

To create drill holes in:

- Hollow bricks
- Aerated concrete
- Perforated sand-lime bricks

Ideal for:

- Frame-fixings or ETICS systems e.g. SXRL, FIS HK, fischer Thermax, EWI and VBS-M

Advantages

- Shortened SDS-Plus shank reduces the impact of the machine on the drill and prevents possible damage to the substrate (it is recommended to use the drill bit without impact).
- Precise and accurate drill holes without damage to the substrate thanks to shortened SDS-Plus shank to guarantee correct fixing with increased load capac-

ities in all types of perforated building materials.

- Diamond sharpened carbide tip with advanced cutting edges ensure fast and safe drilling progress in different materials.
- Large spiral flutes for optimal removal of dust.

Hammer drill bit SDS Max II / SDS Max IV

The hammer drill bits with SDS Max drill chuck

Applications

To create approval-compliant drill holes in:

- Reinforced concrete (SDS Max IV)
- Concrete
- Solid brick
- Sand-lime brick

Also suitable for:

- Natural stone

Advantages

- The SDS Max drill chuck ensures optimum transfer of force and allows for quick drilling progress for large volume drill holes.
- The drill bit head with four cutting edges prevents jamming in the concrete reinforcement.
- The quadruple flute reliably transports

the drilling dust from the drill hole, thus reducing wear.

- The core-reinforced flute ensures maximum transfer of energy, and guarantees a low-vibration drilling.
- The PGM®-compliant cutting element guarantees perfect-fit drill holes to fulfil the highest safety requirements.

Hollow drill bit FHD

Hollow drill bit for drilling with low dust as well as for efficient and approved anchoring

Applications

To create approval-compliant drill holes in:

- Reinforced concrete
- Concrete

Also suitable for:

- Solid brick
- Solid sand-lime brick
- Natural stone

Advantages

- Drilling and drill hole cleaning in one single step saves the normal cleaning of chemical and mechanical anchoring when the hollow drill bit is regulated by their respective approvals. This saves up to 55% of the complete drill hole creation process.
- The drill hole will be cleaned thoroughly guaranteeing a secure fixing (drilling dust reduces performance of fixing materials).
- Reducing the drill dust prevents jamming when drilling therefore provides a faster and frictionless drilling progress.
- Immediate extraction of drilling dust at the drill tip for a clean and healthy work place.
- Centering tip allows for accurate positioning on uneven surfaces reducing slip.

Stone drill bit D-S

Universal masonry drill bit for impact and rotary drilling in masonry and natural stone

Applications

- For regular drilling especially in stone and masonry

Advantages

- 130° carbide cutting edge for long service life, very heat resistant.
- Robust version in accordance with DIN 8039, roll forged.
- Optimum drill dust removal through special spiral geometry.
- Suitable for rotary and impact drilling.

Characteristics

Premium chisel FCP

Premium Chisel with SDS Plus and SDS Max shank for maximum performance and lifetime

Applications

Suitable for creating holes, slots and installation paths as well as breakthroughs in:

- Concrete
- Masonry
- Natural stone

Advantages

- Extended working tip in comparison to the standard chisel for an increased lifetime.
- Self-sharpening design for economical working and reducing downtime.
- Advanced 'jam protection' for reduced friction.
- Specially designed working tip increases the performance and ensures a high removal of material.

Standard chisel

Applications

Suitable for creating holes, slots and installation paths in:

- Concrete
- Masonry
- Natural stone

Advantages

- The SDS Plus and SDS Max drill chuck for the chisel enable the use with professional hammer drilling machines and ensure proven and safe transfer of force.
- The use of a high quality, specially hardened steel with surface protection increases the life span of the tools.
- The high oscillation endurance allows for high work comfort and contributes to the achievement of clean results.

ProfiBit FPB

The all-rounding bit within convincing quality

Advantages

- The bits manufactured from special steel with high hardness degree are suitable for both hand driven and machine guided applications.
- The perfect fitting inside screws ensures working with low-wear of the product and consequently long lifetime and clean working results.
- The profile guarantees an ideal connection for an optimal power and torque transmission that prevents damages of the surface or the screw-heads.
- Also available as clearly arranged bit-set with 10 or 32pcs including bit holder.

Applications

Number of internal drives in various profile sizes, such as:

- PH, PZ cross-slot
- TX star recess
- Suitable for ¼" drives

DiamondBit FDB

The non-slip bit

Advantages

- The coating with diamond-particles ensures the best possible power-transfer and prevents the bit tip from slipping out of the screw head.
- The diamond-coated bit with a high hardness grade guarantees the greatest service life and corrosion resistance.
- The torsion zones created by the tapered bit cross-section offers relief in the case of extreme loads. For a more effortless installation and maximum operating efficiency.
- The high dimensional accuracy enables an optimum bit fit for clean results and a long lifetime.

Applications

Number of internal drives in various profile sizes, such as:

- PH, PZ cross-slot
- TX star recess
- Suitable for ¼" drives

MaxxBit FMB

The ultimate torsion-bit

Advantages

- The ultimate solution for extreme installation torques. Ideal for usage in high-performance power and impact tools.
- Optimal geometry of the profile guarantees unique performance and durability for sophisticated applications and users.
- The elastic torsion zone releases at extreme loads to ensure a gentle working and maximum operating efficiency.
- The high dimensional accuracy allows for an ideal fit. For clean results and a long lifetime.

Applications

Number of internal drives in various profile sizes, such as:

- TX star recess
- Suitable for ¼" drives

BitHolder FBH

The bit holder for rapid bit exchange

Advantages

- The bit holder family for 1/4" bits with magnetic insert hold the bit securely in the drill chuck and offers a smooth installation procedure.
- Robust and slim bit holder for an easy bit exchange.
- Ideal for direct machine connection or enlargement of the bits to reach difficult areas.
- With the FBH QuickBit Slim the bit automatically locked when plugged in and provides a secure hold. By pulling back the sleeve the bit can be easily taken out.

Applications

- The bit holders for use in cylinder drill chucks

BitSet

Useful bit sets for a multitude of applications

Advantages

- Universal use with most common bits as well as a bit holder in one set.
- Compact bit sets with easy handling.
- Safe and clearly arranged keeping of the

- content assuring a reliable usage.
- Robust and durable construction fulfilling even hardest requirements.

Applications

- The ideal bit sets for quick and efficient working
- For a high variation of applications

Vacuum cleaner FVC 35M 635

Gas actuated fastening tool FGC 100 638

Cordless impact wrenches FSS 18V

The specialists for concrete screws.

Column feet

Balcony railings

Applications

- Anchoring of railings
- Column bases
- Pipeline routes
- Canopies
- Shelving systems
- Steel-steel connections
- Tyre changes

Advantages

- The tangential impact wrenches FSS 18V are compatible with all Cordless Alliance System (CAS) chargers and rechargeable batteries worldwide.
- The FSS 18V guarantee low-vibration despite an extremely high torque.
- The additionally accessories supplied as sockets and checking gauges, enable ease of installation and checking for reusability of the concrete screws FBS II gvz.
- The tools are delivered in the compatible L-Boxx, which can be connected by a click system.

- Powerful rechargeable battery (4.0 Ah) with lithium-ion power and integrated capacity indicator to check the state of charge.

Additional advantages FSS 18V 400 BL:

- The 12 levels of regulation allow the torque of the FSS 18V 400 BL to be individually adapted to the application.
- The brushless motor has an overheat protection that increases safety while reducing downtime and wear.

Certificates

Versions

- FSS 18V 400 BL: Torque 400 Nm
- FSS 18V 600: Torque 600 Nm

Functioning

- The fischer cordless impact wrenches FSS 18V are perfectly suited for the installation of fischer UltraCut concrete screws FBS II of all diameters.
- Depending on the head shape of the concrete screw, either an appropriate socket or a special torx bit is recommended for the installation.
- The concrete screw is first screwed in and then tightened by the percussion mechanism.
- If the screw head is in contact with the attachment, correct assembly of the concrete screw is guaranteed (optical setting check).

Vacuum cleaner FVC 35 M

Universal wet and dry vac for virtually dust free applications.

Hollow drilling

Wet vacuuming

Applications

Suitable for:

- Dry suction
- Wet suction

As suction system for:

- Hollow drill bits
- Sawing machines
- Grinding machines
- Milling machines

Certificates

Advantages

- Automatic filter cleaning during suction operation without any interruption enables non-stop suction.
- Vacuum cleaner filter with dust retention capacity of 99,9 % according to dust class M, perfectly suited for use with the fischer hollow drill bit FHD.

Versions

- FVC 35 M
- FVC 35 M UK

- High performance motor for constantly high suction power.
- Matching cleaning set FVC AP enables dry and wet suction work.
- Sealable filter bags guarantee a dust-free disposal.

Functioning

- The power cable of the electrical device is plugged into the socket of the vacuum cleaner. This means that the vacuum cleaner only runs during the use of the device. The left switch can be used to adjust the suction power according to the device used.
- When the filter bag is full, the lamp to the right of the switches lights up. To change the bag, remove the top container, close the filter bag and replace it without generating any dust.

Gas actuated fastening tool FGC 100

Quick and easy fastening in concrete and steel.

Drywall tracks

Electrical installations

Applications

- Drywall tracks
- Electrical installations
- Composite decks
- Insulation systems
- Light duty building construction applications

Advantages

- The 100 joules power ensures correct penetration into the working surface, even for steel to steel applications.
- Easy nail depth adjustment switch to choose how to set the nails.
- Long lifetime with service intervals after every 20,000 fixings under standard conditions.
- Quick release system for a fast disassembling of the magazine and clearing of

- jammed nails.
- Rechargeable battery with Li-Ion power: 8,000 fixings with one charge.
- Battery-LED status.
- A 10 minutes charge allows to fix at least another 300 nails.
- The FGC 100 is delivered in the practical XL-BOXX, which is fully compatible with the L-BOXX.

Certificates

Building materials

- Concrete
- Sand-lime brick
- Solid brick
- Steel

Functioning

- The fischer gas actuated fastening tool FGC 100 is suitable for a fast and reliable installation of e. g. drywall tracks and electrical connections in all directions - on floors, walls and ceilings.
- For optimum installation, the tool must be positioned perpendicularly to the working surface.
- The attached stand gives support but can also be removed to drive nails in narrow areas.
- The tool will operate within the temperature range of -7°C to +50°C.
- The dimensions of the tool are: L 336 mm x W 121 mm x H 404 mm.

Building material – Concrete.

The substrate's quality is crucial when selecting the correct fixing:

Concrete

A differentiation is made between concrete, masonry and panel building materials. Concrete is made from a mixture of cement, aggregates and water.

Concrete's main properties are:

- High level of compressive strength, but only low tensile strength ($\approx 10\%$ of the compressive strength).
- Inserting individual rebars and or mats will increase tensile strength (steel + concrete = reinforced concrete).
- Structure easily reproducible as it is regulated by standards, therefore it is an ideal anchor base.

Concrete is mainly split into two categories:

- **Standard concrete and lightweight concrete.** While standard concrete contains gravel; lightweight concrete contains additives such as pumice, expanded clay or polystyrene® usually with a lower compressive strength or bulk density. This leads to unfavourable conditions for anchor fixings.
- **The load bearing capacity of heavy duty fixings depends on the concrete's compressive and tensile strength.** This is indicated by the numbers in the abbreviations: e.g. the most commonly used concrete compressive strength is C20/25 with a cube compressive strength of 25 N/mm^2 .

Expert tip

Standard concrete qualities:

C12/15 to C50/60, even higher grades are also available for special applications. The majority of anchors approved for concrete may only be used from concrete quality from C20/25 up to a max. of C50/60. In the past, designations from DIN 1045 were used in Germany: B25 (~ C20/25) to B55 (~ C45/55).

- C = concrete
- 20 = compressive strength f_{ck} or $f_{ck, cyl}$ of a concrete test cylinder ($\varnothing 150 \text{ mm}$, height 300 mm) in N/mm^2
- 25 = compressive strength f_{ck} , cube of a concrete test cube (edge length 150 mm) in N/mm^2

Normal concrete without accelerating additives reaches its nominal strength after 28 days. Only then can the fixing be installed in compliance with the approval/assessment.

Fresh concrete: still workable up to approx. one hour after pouring.

Green concrete: starts to harden after four hours, no longer workable.

New concrete: is hardened after 28 days, however minimum compressive strength not yet reached.

Hard concrete: more than 28 days old, nominal strength reached.

Compressive strength classes in different countries

Country	Specimen	Dimensions ¹⁾ [cm]	Concrete strength class	Unit	Standard

Expert tip

- **Anchors** used in **new concrete** must be **suitable** for this purpose, or may only bear loads after reaching the minimum compressive strength.
- **Concrete** always shows **cracks** (shrinkage during hardening, loading).
- In **cracked concrete**, anchors which are tested in cracked concrete must be used. These anchors must be able to **expand** when concrete starts to crack e. g., expansion anchors (e. g. FAZ II), form locking anchors or undercut anchors (e. g. FZA), or bonded anchors (e. g. FIS SB).
- **Cutting** through **reinforcement steel** while making **drill holes** is **not permitted**. In special cases, non load-bearing steels can be cut after consultation with the responsible engineer.
- The load bearing capacity of the concrete along the entire drill hole must be guaranteed (no honeycombing in the concrete, no voids and pockets).
- **Pre-stressed concrete**: A certain drilling distance must be maintained from the tensioning strands as stated in the approval/assessment (e. g. FHY, FBS 6 or EA II).

Building material – Masonry.

Compared to concrete, there is a larger variety of masonry building materials.

Solid brick

Solid sand-lime brick

Vertically perforated brick

Porous sand brick

Masonry can be classified according to:

- brick type used (e. g. natural stone, lime stone or aerated concrete).
- wall type (e. g. single or double layer).
- brick strength class and gross density.

Generally, masonry is classified into four groups:

- 1 Solid bricks with a dense structure are a highly compression resistant building material, without cavities or low hole surface percentage (up to a max. 15 % e. g. as grip holes). This type is very well suited for anchor fixings.
- 2 Solid bricks with porous structure usually have a very large number of pores and low compressive strength. Therefore, special fixings should be used, e. g. fixings with a longer expansion zone or bonded anchors.
- 3 Perforated bricks with a compact structure (perforated and hollow bricks) are mostly manufactured from the same compressive strength materials as solid blocks but with cavities. If higher loads are introduced into these building materials, special fixings should be used (e. g. bonded anchors, FIS V), which bridge or fill the cavities.
- 4 Perforated bricks with porous structure have many cavities and pores and thus generally a low compressive strength. In this case, special care is required when selecting the fixing. Suitable fixings include those with a long expansion zone or form locking injection anchors.

Lightweight concrete solid block

Aerated concrete

Lightweight concrete hollow block

Expert tip

- Before fixing in masonry, determine which brick type (designation, size, compressive strength) and mortar type (mortar category) has been used.
- For safety anchoring in unknown or old masonry, pull out tests must be carried out on-site to determine the anchor load bearing capacity.
- For fixings close to the edge, it is important to know if the wall is a load bearing wall as this prevents the risk of brick pull out.
- Even solid brick can have holes (e. g. MZ, KS). The holes are mostly larger grip-holes in the centre of the brick (up to max. 15 % cavity proportion per brick).
- Always drill without hammer function in perforated and hollow bricks. Here, special, sharply ground drills with hard metal tips are suitable.
- Plaster or other non load-bearing layers may not be added to the load-bearing base and are not to be used in calculating the anchorage depth.
- Avoid anchoring into masonry joints as much as possible due to joint inhomogeneity. If anchoring into a joint cannot be avoided (e. g. plaster on masonry) loads should be reduced.
- For systems approved by building authorities, anchoring in joints (vertical or horizontal joints) is regulated in the approval notices.
- For anchoring high loads in perforated bricks, the anchorage depth should be increased.
- Expansion fixings (e. g. FAZ II or FBN II) are not suitable for use in masonry due to its high expansion forces which may lead to cracks in the brick. Frame fixings are suitable due to its longer expansion part.
- Bonded anchors achieve the highest possible loads in masonry

Building material – Drywall panels.

Laminated wood panel

OSB boards

Chipboard

Panel building materials are thin-walled materials that often have limited strength – e. g. plasterboard like “Rigips”, “Knauf”, “LaGyp”, “Norgips”; Gypsum fibreboard like “Fermacell”, “Rigicell” or chip board, hard fibre boards, plywood and others.

The main characteristics of panel building materials are:

- Often thin-walled materials, mainly with limited strength.
- Easy-to-process materials for non load-bearing walls and also used as cladding material (e. g. walls, roofs or ceilings).
- A wide range of different building materials.

Special fixing elements must be used:

- **Cavity fixings** are fixings made of plastic or metal, which anchor by form locking into the material, e. g. by knotting or a snap on mechanism (e. g. toggles).

Plasterboard

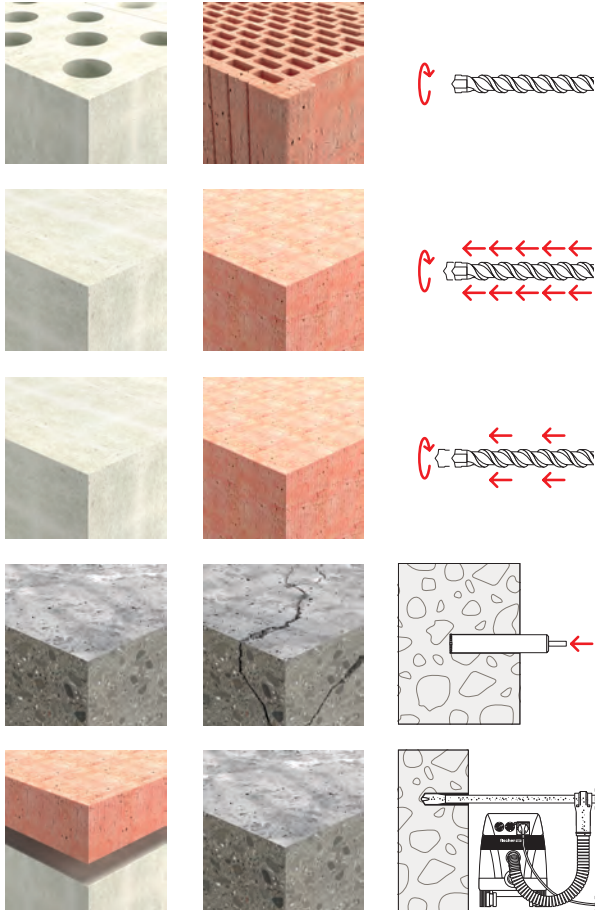

Gypsum fibre reinforced

Expert tip

- Only approved anchors should be used for **lightweight materials, prestressed hollow core** slabs and panel materials.
- Contact your fischer consultant on site before anchoring **heavy or safety-relevant loads** in the above-mentioned substrates

Drilling.

The building material determines the drilling method.
Five methods are possible:

Rotary drilling

Rotary drilling without impact, uses a sharply ground carbide drill bit. When this method is used, the drill hole does not become too large and the perforated brick's webs do not break.

Impact drilling (mechanical)

Impact drill with rotation and a high number of light strokes, is suitable for dense structured building materials..

Hammer drilling (pneumatic)

Hammer drill uses rotation and a low number of light strokes with high impact energy, also suitable for dense structured solid building materials.

Diamond or core drilling process

Mainly used for larger drill hole diameters or for heavily reinforced components and/or if noise or vibration must be reduced.

Hollow drilling

Special drill with a hollow core, which is connected to a vacuum cleaner. Cleans the drilled hole during the drilling operation. No further brushing or blowing is required. Can be used in concrete and masonry with dense structure.

Expert tip

- The drilling method for approved anchors is specified in the **approval / assessment**.
- Drill bits with **excessively worn cutting edges** should **not be used** (see approval/assessment).
- For certain fixings, **special drills** are required (e. g. a stop drill) as per approval/assessment.
- **Drill holes** must be **carefully cleaned** (blown out and brushed). See the respective approval/assessment or manufacturer's specifications.
- The **drill hole depth** is always exactly specified and relates to a given anchoring base thickness. For general applications without an approval/assessment the following applies: the drill hole depth + 30 mm should not exceed the anchoring base thickness.
- In case of **incorrect drilled** holes (hitting reinforcements or wrong location), the location for the new drill hole depends on the applicable fixing). Usually, the distance for the new drill hole must be twice the depth of the incorrect drill hole. The wrong drill hole must be filled with injection mortar (e. g. FIS V).
- **Diamond core drilling** is only permitted if stated in the approval/assessment or according to manufacturer's guidelines (e. g. RSB, FIS EM Plus, FAZ II, FBS II...).
- **The load bearing capacity is reduced** by water filled holes or wet substrates especially for chemical or plastic fixings.
- **Cutting** through a reinforcement must be avoided.
- **The drill hole** must be drilled perpendicular to the anchor base (an inclination of up to 5° is permitted). Exceptional cases are regulated in the anchor approval/assessment and or according to manufacturer's guidelines.

Installation.

In general, the following aspects must be taken into consideration during installation.

The edge distance c and centre distance s , as well as the component thickness and width, must be carefully observed to ensure that the fixing can take the required load. Otherwise, it may lead to spalling of the construction material or cracks. For fixings without approval, e.g. nylon fixings, a minimum edge distance of $c = 1 \times h_{ef}$ (h_{ef} = anchorage depth) and a minimum spacing of $s = 1 \times h_{ef}$ must be adhered to for concrete. When using non approved metal anchors, a minimum edge distance of $c = 1.5 \times h_{ef}$ and a minimum spacing of $s = 3 \times h_{ef}$ is recommended. When using hammer-set anchors, spacing and edge distance can increase due to higher expansion forces.

The drill hole depth h_b must be larger than the anchorage depth (exception chemical anchor systems), to ensure that the screw has enough room at the end of the fixing element to penetrate at least one time the screw's diameter.

Drill hole cleaning after drilling, e.g. by blowing out, brushing or suction, is generally necessary. The load bearing capacity will be reduced, if the hole is not cleaned. Exceptions: approved anchor systems where no hole cleaning is required, e.g. FHB II + PF - High speed capsule.

Expert tip

- **Strictly adhere to specifications** for component geometry, edges and spacings distances. If this is not taken into account, the component will be damaged or the anchor capacity will be reduced.
- **Drill hole cleaning is essential.** The specifications in the approvals and the manufacturer's specifications must be observed.

Installation types.

There are three different types of installation.

Anchor bolt FAZ II

Frame fixing SXRL

Zykron anchor FZA

Aircrete anchor GB

Threaded rod FIS A

Push-through installation

In particular for simplifying installation for series installations or for attachments with two or more fixing points:

- If the attachment's hole diameter is larger than the drill bit diameter, then the attachment can be used as a template. Please note: The drill bit tip is generally larger than the nominal diameter of the drill.
- In addition to facilitating a simple installation, an exact fit is also achieved.
- The fixing is inserted into the drill hole through the attachment and then tightened (e.g. FAZ II, FBN II, FH II).

Pre-positioned installation

The anchor is installed before fastening the attachment. If drilling is not done precisely, then the holes in the attachment will not match up. This could mean that the anchors cannot be installed or could cause damage to the anchors. The installation sequence:

- Transfer the hole pattern of the fixture to the anchor base.
- Drill and clean the holes, install the attachment and then fix the attachment (e.g. plastic fixings: S, SX, UX; metal fixings: FZA, EA II).

Stand-off installation

This allows attachments to be compression and tension resistant at a certain distance from the anchor base. For this purpose, external threaded metal anchors (e.g. FAZ II, FBN II) or internal threaded anchors (e.g. EA II) with screws or threaded rods are clamped against the anchor base surface while using a bearing washer and nut. When using chemical systems with threaded rods (e.g. FIS SB, FIS V, FIS V Plus, FIS EM Plus, and FIS A), the installation can be done without using a bearing washer and nut. A stand-off installation is absolutely not recommended in seismic regions.

Expert tip

- **Clearance holes in the attachment** are specified for the respective anchor size in the approvals/assessments and manufacturer's guidelines.
- For **stand-off installations** with shear loads on the anchor, additional bending moment occurs and this must be considered.
- **The attachment must lie** fully flush on the surface base or it must have either a compression resistant levelling layer of max. 3 mm or half the anchor's diameter, otherwise the anchor must be checked for bending.
- **The attachment shall be in contact with the anchor** over its entire thickness, otherwise the anchor must be checked for bending.
- **Usable length is the maximum fixing height** t_{fix} which takes into account the attachment's thickness plus additional non-bearing layers (e.g. plaster, air, insulation etc.).
- Post-installed anchors must be tightened with a specific torque. A calibrated torque wrench must be used to ensure the correct pre-stressing force and the correct installation of the anchor. **For chemical anchors, the prescribed hardening time must be adhered** to before tightening torque or service load can be applied.
- Anchors must be mounted as a standard unit as delivered. The exchange or removal of parts is not permitted.

Loads.

When selecting an anchor, it is necessary to know the load on the total construction and the resulting action forces.

Action forces can differ based on:

Dimension · Direction · Type of load · Point of application

- There are various types of loads: Approvals generally give characteristic resistance. In the manufacturer's guidelines, "permissible loads" are specified for products with approvals. For anchors without an approval, "recommended loads" are given by the manufacturer.
- Determine the size, direction and point of application** of the load. These parameters determine which anchor should be used.
- Characteristic resistance** (N_{RK} or V_{RK}) describes the 5% fractile of resistance. (Value with a 95% probability of being exceeded, with a confidence level of 90%).
- Permissible loads** are working loads that already include an appropriate safety factor. These only apply if the approval conditions are complied with (N_{perm} or V_{perm}).
- Recommended loads or maximum working loads** include an adequate safety factor. These only apply if the manufacturer's specifications are complied with (F_{REC} – valid for all load directions, N_{REC} – for compressive or tensile load or V_{REC} for shear load).
- The calculation** is carried out by dividing the respective failure load or characteristic loads by a safety factor.
- Recommended safety factors compared to the average failure load:**
 - Steel and bonded anchors $\gamma \geq 4$
 - Plastic anchors $\gamma \geq 7$
 - Hammerfix anchors N $\gamma \geq 4$
- Recommended safety factors compared to the characteristic failure loads:**
 - Steel and bonded anchors $\gamma \geq 3$
 - Plastic anchors $\gamma \geq 5$

For deviations to the regulation, see load tables. For certain products, the safety factors may deviate. In general, the global safety factor is calculated using the scatter of the failure load, the failure probability and the reliability index of a product.
- The specified loads** apply to individual anchors that are installed away from the edge, i. e. there is no influence from edges or other anchors.
- The characteristic spacing and edge distances**, marked with $c_{Cr,N}$ and $c_{Cr,V}$, give the distances at which an anchor achieves its max. characteristic load.
- The specified minimum spacing and edge distance**, marked with s_{min} and c_{min} , indicates the distance at which no failure of the building material will occur when installing the anchor (cracks). These distances are mandatory and must be complied with. The characteristic spacing and edge distances may be shorter but not less than the minimum values but at the same time the load bearing capacity must

Load directions

Types of loads

be reduced. When combined loads occur, loads are determined separately for tensile and shear load and the overall utilization is determined by means of an interaction equation. As a rule, the sum of the ratio values of the applied load divided by the resistance from tensile and shear loads is less than or equal to one point two.

Working principles.

There are different load transfer mechanisms which induce forces acting on the anchor in a building material.

Sleeve anchor (e.g. FH II)

Nylon anchor (e.g. SX)

For **frictional locking**, the expanding part of the anchor is pressed against the drill hole wall.

Undercut anchor (e.g. FZA)

Injection anchor (e.g. FIS V with cone drill PBB)

For **form locking**, the anchor geometry adapts to the substrate's form or drill hole shape (e.g. conical drill hole).

Resin anchor (e.g. Superbond RSB)

Subsequent reinforcement connector with concrete reinforcing bars (e.g. FIS EM Plus)

For **adhesive bonding**, the load will be transferred by a combination of adhesion and micro-keying (e.g. using resin / injection mortar).

Expert tip

- For many fixings, a combination of working principles occurs (e.g. in soft base material a combination of friction and form locking takes place).

Failure modes.

If there is excessive stress, incorrect installation or a substrate with inadequate load bearing capacity, the following types of failure can occur.

Steel failure tension

Steel failure shear

Pull out

Combined failure

Steel failure:

- Insufficient steel strength for the applied load

Pull out failure:

- Friction failure and or adhesion failure due to high load or incorrect installation

Combined failure:

- Pull out
- Concrete failure near the surface

Concrete cone failure

Pry-out failure

Concrete splitting failure

Concrete edge failure

Anchor base failure:

- Tensile load "N" or shear load "V" too high
- Inadequate strength of anchor base
- Insufficient embedment depth

Anchor base splitting:

- Insufficient component dimensions
- Deviation from the spacing and edge distances
- Excessive expansion pressure

Expert tip

- In most anchor approvals/assessments, the anchoring of **predominately static loads** is regulated. However, there are also approvals which regulate non-static loads (fatigue loads, e. g. FHB dyn).
- Seismic loads for post-installed anchors are regulated in Europe according to the Eurocode 1992-4 and the testing of the product for the seismic services is carried out with a European Technical Assessment ETA. The seismic performance of an anchor system is described according to performance categories in C1 and C2. In the American methods according to

ACI-318-14 these categories do not exist for the seismic case, the testing of the product is always carried out according to an ICC-ESR in concrete for the earthquake case without dividing the product into categories. Classification in accordance with C1 and C2 is not necessary). The performance category and the characteristic values are found in the respective ETA (e. g. FAZ II, FH II, FIS SB, FIS EM Plus...).

- **The main causes for anchor failure are overloading, incorrect installation or an insufficient load bearing anchoring base.**

Cracks in concrete components.

Cracks can occur anywhere in concrete at any time:

Factors involved in this are loads such as dead loads, traffic or wind loads, concrete shrinkage and creeping or external influences such as seismic activity or ground motion result in stresses and deformations thus leading to cracks.

Example

If a bridge designed as a single-span element is loaded, the bridge will buckle. Due to this buckling, cracks could occur in the element's tensile area.

Concrete is not able to support tensile loads, therefore, reinforcements are placed in the element to take the tensile load area numerous cracks are formed that are barely visible to the naked eye. This is called the cracked tensile zone.

Suitable anchor systems for cracked concrete

When fixing in concrete, **cracks** are always **expected in the anchoring area which will have an impact on the load bearing capacity** of the anchor system. However, it is very complicated, if not impossible, to prove whether the concrete is cracked or not cracked.

For safety reasons, designers and craftsmen should **always use anchor bolts which are suitable for cracked concrete**. Fixings with an approval/assessment according to EN 1992-4 for cracked concrete have proven their suitability in cracks, therefore they can be used without any restrictions in tensile and compression zones of a concrete member.

Undercut anchor FZA

Bolt anchor FAZ II

Threaded rod FHB II

Frame fixing SXRL

Due to safety reasons, always use crack-suitable anchor systems such as FAZ II, FH II, FHB II, FIS SB, FIS EM Plus, FIS V or FIS V Plus.

Fire protection – Fundamentals.

General requirements of building structures for fire protection.

Structural installations

They are to be ordered, erected, changed and brought into commission in such a way that:

- The emergence of a fire is prevented from breaking out.
- The spread of fire and smoke (spread of fire) is prevented.
- In the event of a fire, the rescue of people and animals is possible.
- Effective fire-fighting operations are possible.

German regulation

In Germany, the procedure for construction and operational fire protection are specified by the fire protection standard DIN 4102, the Model Building Ordinance (MBO), Regional Construction Ordinances (LBO) and various trade-specific regulations from professional associations.

The following applies as per Section 1 and 2 of DIN 4102:

Building materials such as **concrete, wood, stone, metal** etc., are classified according to their behaviour **into flammable or non-flammable building material classes.**

However, **components composed of different flammable and non-flammable materials** are not classified into fire classes in building construction but they are evaluated as a complete system according to their fire resistance duration. The fire resistance duration R is indicated in minutes and classified according to two categories:

- **Components with a fire resistance duration of R30 and R60 are fire-inhibiting.**
- **Fire-resistant**, are all components with a fire resistance duration of R90, R120 and R180.

Tested systems such as cable, ventilation or duct systems are not only tested for fire resistance, but also for functional capability in the event of fire (e. g. supply lines to sprinkler systems). The fire resistance duration of these systems is e. g. E30 to E120 for electrical cable systems or L30 to L120 for specified ventilation ducts. The anchors that are used to fasten these systems must have at least the same fire resistance duration.

European standardisation

In accordance with the European Norm DIN EN 13501-1, the classification of fire behaviour of building materials / products is similar to that of DIN 4102. The classifications are, however, much more precise.

In addition to, the main classification criteria concerning flammability, flame spread and heat released, e. g. smoke development and dropping behaviour is tested.

Fire resistance of components has been tested in Germany in accordance with the European Norm DIN EN 1363 or DIN EN 1365 since 2000. The fire resistance duration is then labelled with the letter R for "Resistance".

The standard temperature-time curve (ETK) of DIN 4102 and ISO 834 is based on a simulation of real fire conditions and forms the evaluation basis that is used worldwide to determine the fire resistance duration. In addition, there are other temperature curves for special fire exposures, e. g. the hydrocarbon curve for destructive fires caused by flammable liquids or the RAB/ZTV tunnel curve (Germany) or the Rijkswaterstaat tunnel curve (the Netherlands), which describe tunnel fires.

Temperature curves: — (ETK), — Hydrocarbon curve, -- RABT/ZTV tunnel curve — Rijkswaterstaat tunnel curve

Fire protection in fastening technology.

The fastening technology has a vital importance in fire protection. To ensure the functional capability and stability of railings, pipe systems, fire safety doors or ceiling elements.

Before the fire test

Assessing fixings for fire is carried out in accordance with the technical regulation EOTA TR020 or in accordance with fire protection reports.

The labelling and classification of anchors and fixings is classified in:

- 1 Fire behaviour (e. g. non-flammable)
- 2 Fire resistance duration (e. g. R90)

For this purpose, the legal regulations set down in the final draft of the Delegated Act "Fire Behaviour" must be observed.

EOTA TR020 only states anchor performance ratings that have an **ETA for cracked concrete!** Meanwhile, a new evaluation document issued by the German Institute for Construction Engineering (DIBt) is used to determine the characteristic load values and the corresponding fire resistance duration. A partial safety factor of $\gamma_M = 1.0$ on the load side is used in the event of fire.

The fire values only refer to anchor bolts that are directly exposed to flames.

Alternatively, anchors can be protected from direct exposure to fire by using fire protection panels or fire protecting coatings.

For fixing cladding systems, it is assumed that the load bearing capacity of specified plastic screw anchors in concrete with an external diameter of 10 mm and a metal screw diameter of 7 mm and an anchoring depth of $h_{ef} = 50$ mm with a polyamide PA6 plastic sleeve has a sufficient fire resistance of at least 90 minutes (R90), if the permissible load (no permanent centric tensile load) is ≤ 0.8 kN.

During the fire test

After the fire test

Corrosion – Fundamentals.

Corrosion is a chemical reaction which degrades metal.

The less noble the metal (“electrochemical potential”), the more severe the material damage is, resulting in metal loss or corrosion flakes. For this reason, different appearance patterns have been determined. **The most common types of corrosion in fixings and anchors are:**

Surface corrosion: In this case, the metal corrodes relatively uniformly over the entire surface or over a part of the surface. An example of this is the invisible rusting of a screw in the transition area from anchor plate to hole due to condensation. The result: A connection that appears completely intact from the outside, but suddenly fails.

Contact corrosion: If metals with a different nobility are in contact with each other in a conductive medium, the less noble metal always corrodes (the anode). Whereas stainless is not affected. A decisive factor is the surface ratios of the two types of metal: The greater the surface area of the most noble metal in comparison with the less noble, the greater the corrosion. For example, if larger stainless steel sheets are screwed with galvanised screws, the screws will be aggressively attacked within a very short time. Whereas using stainless screws in galvanised sheets poses no problems.

Stress corrosion cracking: Permanent internal or external tensile stresses lead to metal strain or corrosion. In this process, a crack develops due to mechanical stresses, which grows under increasing loads and thus creates a path for progressive corrosion. For example, this occurs with stainless steel of corrosion resistance Class III e.g. R-Steel, in an atmosphere containing chlorine (swimming pools). Generally, stress corrosion cracking is not visible with fixings and usually leads to sudden failure of the anchoring.

In 1985, the suspended concrete ceiling of an indoor swimming pool collapsed in Uster, Switzerland. The stainless steel ceiling attachments exhibited no external defects, but were completely destroyed internally in some cases due to stress corrosion cracking.

Corrosion protection.

There are different ways to protect fastenings from corrosion. The most important are:

Galvanised zinc coating (or also electrolytic zinc coating) followed by passivation is the most common corrosion protection used in metal finishing. A zinc coating thickness of 3–10 µm offers excellent corrosion protection for damp rooms and outdoor use.

Hot-dip galvanising is the application of a metal zinc coating by dipping it in molten zinc (at approx. 450 °C). Zinc layer thickness's of 45–80 µm offer an excellent corrosion protection for moist rooms and outdoor use.

Stainless steel fixings of corrosion resistance class III e.g. R, material no. 1.4401, 1.4404 and 1.4571 as well as two phased duplex steel (austenitic and ferritic structure / magnetic) are suitable for anchoring in damp rooms, in open air, in industrial atmospheres or near the sea (but not directly in sea water).

Stainless steel anchors made from high corrosion-resistant steel of the corrosion resistance class V e.g. HCR material no. 1.4529 are used in especially aggressive environments e.g. in atmospheres containing chlorine (swimming pools), in road tunnels or with direct sea water contact. Due to their high molybdenum content they are resistant in such aggressive environments. That means that steel type 1.4529 – containing chrome, molybdenum and nickel – has an alloy content of 58%. The rest consists of iron and carbon. Due to this very high alloy content, the production for this steel type is very expensive, but on the other hand the connection is safe and maintenance-free in terms of corrosion.

Example of trans-crystalline stress corrosion cracking on stainless steel 1.4401 with high chloride concentration

Dynamics.

For predominantly non-static loads.

Elevator guide rails

Industrial robots

Blast fans

Antenna and masts

The general building approvals issued by the **German Institute of Construction Engineering (DiBt) and the European Technical Approvals / Assessments (ETA)** are mainly valid for predominately static loads. However, there are certain applications e.g. swing-ing cranes, crane rails, jib cranes, elevator guide rails, machines, industrial robots and blast fans in tunnels including antenna and masts which are subjected to dynamic effects.

In general, the anchoring of components with more than > 1000 load cycles must be carried out using fastening elements that have been checked and approved for this purpose. Until recently, the design for post-installed anchors for such dynamically loaded applications was nearly impossible. Time consuming and costly expert reports and or approvals for individual applications were required.

The bonded anchors: fischer Highbond anchor FHB dyn and fischer UMV multicone dyn and FDA **have a German DiBt approval for dynamic loads.** In the approval, only fatigue loads are considered as dynamic loads and not loads from shock or seismic activity.

The approvals apply to the anchoring of dynamic loads with unlimited numbers of load cycles, for tension and for shear loads.

In addition, the FHB dyn is manufactured in anchor size M12 and M16 from highly corrosion-resistant steel (e.g. corrosion resistant Class V - 1.4529).

Dynamic load tests have shown - compared to normal stainless steel grades of corrosion resistant class III (e.g. 1.4401 also known as 316) - that this material is not only highly suitable for indoor and outdoor humid environments, as well as other aggressive conditions, it is also highly suitable for dynamic loadings.

Wöhler curve

Action	Run of the oscillation	Possible cause
harmonic	 sinusoidal	Unbalances, tumbling machines
periodic	 optional, periodical	Regularly abutting parts (e.g. punching machines), rail- and road traffic
transient	 optional, nonperiodical	Earthquakes
impulsive	 optional, with very short time of influence	Impact, explosion

Legal basis.

The European Union (EU) determines the legal foundation for the assessment, CE labelling and bringing building products into the European Economic Area (EEA).

The aim is to reduce trade barriers by harmonising the requirements of building products.

REGULATION (EU) No 305/2011 (Construction Products Regulations) OF THE EUROPEAN PARLIAMENT AND COUNCIL fully came into force on 1st July 2013. The Construction Products Regulation is law in all EU countries. However, the Construction Product Directive 89/106 / EEC is not law in all EU countries.

Important building requirements include:

1. Mechanical strength and stability
2. Fire protection
3. Hygiene, health and environmental protection
4. Safety and accessibility during use
5. Sound protection
6. Energy saving and heat protection
7. Sustainable use of natural resources

When a construction product is covered by a harmonised standard (hEN), or a European Technical Assessment or Approval (ETA) has been issued for this product, the manufacturer is obligated to draw up a Declaration of Performance (DoP) for this product and affix the CE marking on the product. The application for an ETA for a construction product by the manufacturer is voluntary. National approvals may only be issued if a construction product is not marked with a CE label.

Existing European Technical Approvals (ETA) are valid until the end of the validity date and will be amended with the Declaration of Performance (DoP) by the manufacturer from the due date.

The reference number of the DoP is part of the CE marking and must be determined by the manufacturer. The Declarations of Performance (DoP) are available on the fischer website under "Approvals/Assessments": <http://www.fischer.de/sdb>.

Construction products are products, or parts which are permanently incorporated into buildings. Their performance influences the structure's basic requirements (e. g. mechanical strength). Therefore, construction products and materials for safety relevant applications are affected.

The CE mark is the only means to certify whether the manufacturer has conformed to the applicable harmonised requirements of construction products. The CE label allows the construction product to be freely traded without trade barriers in the European Economic Area.

Each Member State determines the essential characteristics for use of the construction product and its performance in its territory. The unrestricted use of a construction product in a Member State depends on whether performance values exist in the DoP for the essential characteristics determined by the Member State. If one characteristic is declared with "NPD" (No Performance Determined), this can lead to a ban on use in a Member State. Therefore, each member State must establish Product Contact Points, which will provide information on these regulations. In Germany, this is the Federal Institute for Material Research and Testing (BAM: see www.pcp.bam.de).

Assessment procedure.

Fasteners which are not covered by a harmonised standard (hEN) can apply for an ETA (European Technical Assessment) on the basis of a European Assessment Document (EAD).

Existing assessment documents, such as ETAGs (European Technical Approval Guidelines) for metal and plastic fixings are still valid and transferred into EADs in accordance with the EU Construction Products Regulation (CRP). The ETAGs and the new EADs can be downloaded from the EOTA website: <http://www.eota.eu>

The assessment document for mechanical fasteners (ETAG 001-1, -2, -3, -4 or in the future, EAD 33-0232) and the assessment document for bonded anchors (ETAG 001-5 or in the future, EAD 33-0499) divides possible approvals of metal fixings into 12 options.

Options 1-6 are for use in cracked and non-cracked concrete, options 7-12 are only for use in non-cracked concrete. Anchors of Option 1 offer the largest range of flexibility for assessment, since performance values for concrete of the strength classes C20/25 to C50/60, as well as the minimum spacing and edge distances are available (see table below).

Section 6 of the ETAG 001 (in the future, EAD 33-0747) regulates the assessment of metal fixings in cracked and non-cracked concrete for multiple use for non-structural systems. Non-load bearing systems include components which do not contribute to the stability of the construction, they only transmit their dead or wind load. These are, for instance, simple suspended ceilings and false ceilings, pipelines and façade claddings.

When using fixings for multiple use, it is assumed that if excessive slippage or failure of a fixing point occurs, that the load will be transferred to neighbouring fixing point. A fixing point can be defined as a single anchor or a group of anchors.

This is known as a redundant system, where stability is not affected by an individual anchor failure.

Possible assessment options according to EAD

Options	Cracked concrete	Non-cracked concrete	One value for all concrete strengths	Different values for C20/25 to C50/60	One value for load direction	Separate values for tensile and shear capacity	C_{Cr}/S_{Cr}	$C_{min} < C_{Cr}/S_{min} < S_{Cr}$	Design method as per EN 1992-4

Design of fastenings.

Two different anchor designs are differentiated.

Method with global safety factors

Permissible loads are determined from the average failure load or from the 5% fractile load and compared with the action load.

The safety factor depends on the anchoring system, the type of installation and external influences such as temperature and or humidity. Global safety factors are generally $\gamma = 3$ for steel and bonded anchors and $\gamma = 5$ for plastic anchors.

Methods with partial safety factors

According to this method, it is shown that the value of the design actions S_d does not exceed the value of the design resistance R_d ($S_d \leq R_d$).

The action on fixings are determined according to the same rules and used the same partial safety factors employed in reinforced concrete design (see Eurocode 1990; national appendix must be observed).

The design resistance is determined by using the characteristic resistance and the partial safety factor of the material (γ_M), which takes into account the scatter of the material. The values can be taken directly from the ETA. Safety is national law. The design method as well as the related partial safety factors are determined by the Member State.

Only the product-specific coefficient for installation is specified in the ETA, which is used to calculate the partial factor γ_M . The design standard EN 1992-4, contains the national determined partial safety factors (observe the respective national appendix).

The design method as set down according to ETAG 001, Annex C - design method for metal anchors and the design method according to TR029 - bonded anchor design in concrete, as well as CEN/TS 1992-4, Section 4 (mechanical anchors) and Section 5 (chemical anchors) are the current methods for anchor design based on a European Technical Approval or Assessment (ETA). Moreover, the ETAG 001 Annex C distinguishes between three different design methods (A, B and C), method A being the most important and the most economical method since anchors are considered separately for all load directions and failure modes. Methods B and C play a minor role and are hardly used.

Other important design provisions are:

EOTA TR020

Anchor design in concrete under fire exposure, or CEN/TS 1992-4, Part 1, Appendix D

EOTA TR045

Anchor design in concrete for seismic actions

The applicable assessment design methods are generally indicated in the respective ETA. It is important that design methods are not commingled.

The design for metal anchor (under static and seismic loads as well as under fire exposure) is summarised in EN1992-4, i.e. in Section 4 of the Eurocode 2, ratified by each Member State and, adapted for national annexes.

fischer has developed a simple yet powerful design software for daily use: the fischer Fixperience-Module C-FIX. The software enables designers and users to carry out anchor designs according to different design methods. Complex anchor arrangements can be calculated quickly and easily. The feature "multiple design" makes it possible to select the best technical and cost saving solution.

The CE mark is the only means to certify whether the manufacturer has conformed to the applicable harmonised requirements of construction products. The CE label allows the construction product to be freely traded without trade barriers in the European Economic Area.

Each Member State determines the essential characteristics for use of the construction product and its performance in its territory. The unrestricted use of a construction product in a Member State depends on whether performance values exist in the DoP for the essential characteristics determined by the Member State. If one characteristic is declared with "NPD" (No Performance Determined), this can lead to a ban on use in a Member State. Therefore, each member State must establish Product Contact Points, which will provide information on these regulations. In Germany, this is the Federal Institute for Material Research and Testing (BAM: see www.pcp.bam.de).

Approvals, markings and their importance.

In the following, excerpts of approvals that are currently issued in Europe and their symbols will be given with their corresponding importance. Please check whether your application is safety relevant.

An application is safety relevant when failure of anchorages would cause risk to human life or serious injuries and/or lead to considerable economic consequences. In this case please use anchors with a European Technical (ETA) or with a German Approval. You may recognise these anchors by:

ETA-05/0069, for cracked concrete

European Technical Approval/Assessment

Issued by a European approval authority (e.g. DIBt) on the basis of the guidelines for European technical approvals (ETAG). ETA (English): European Technical Approval/Assessment. CE: The CE marks the conformity of the product to all applicable legal provisions in which their installation is intended. This means that the CE mark only certifies that the requirements determined in the relevant harmonisation legal provisions of the union have been complied with. Products with the CE mark can be freely traded in the European Economic Market.

ICC ESR-2948

ICC = International Code Council, formed from BOCA, ICBO & SBCCI:

ICC Evaluation Service Inc. (ICC ES) issues reports, e.g. for subsequent anchoring on the basis of the International Building Code® and the related standards in the United States of America.

from M10

FM Certificate:

Recognised for use in local water-based fire extinguisher systems (Factory Mutual Research Corporation for Property Conservation, American insurance company).

General Building Authority Approval:

German approval, issued by the DIBt, Berlin with the accompanying certificate of conformity for construction products with the general building authority approval. Confirmed by a material testing institute.

Fire resistance classification R120

Fire-tested fixing:

German approval, issued by the DIBt, Berlin with the accompanying certificate of conformity for construction products with the general building authority approval. Confirmed by a material testing institute.

INOX STAINLESS STEEL

Product is available in highly corrosion resistant steel of corrosion resistance class IV, e.g. 1.4529.

Dynamically loadable anchors

The anchor is suitable and approved for anchoring of “not predominantly static” (i.e. dynamic) loads. static” (i.e. dynamic) loads. static” (i.e. dynamic) loads.

General construction-related test certificate

The fixing is suitable for anchoring under **seismic influence**.

Please note: The ICC-ESRs also allow seismic stress (see Category C1 and C2 in accordance with the ETAG 001 Annex E).

Mark for labels that confirm compliance with the VDS-CEA guidelines for sprinkler systems, planning and installation. Fixings labelled as such may be used for fixing pipes for extinguishing systems.

Tested for flammability in accordance with VDE.

Fixings for tensile zones

The fixing is suitable and approved for anchoring in cracked concrete (tensile zone) and in uncracked concrete (compression zone).

Fixing made of high-quality, ageing-resistant **nylon** (polyamide).

Component test with window frame screws in accordance with ift guideline MO-01/1; Testing structural connections on windows.

The term “approvals” used in the catalogue consists of documents that are available and can be used as evidence of the usability of building products for which the documents were issued. These are (fire) reports, general construction-related approvals issued by the German Institute for Construction technology Berlin (e.g. Z-21...) or European Technical Approvals or Assessments (ETA). In general, the usability of construction

products in an EU Member State is given, if the performance of the significant characteristics required in each Member State has been clarified/ confirmed by the manufacturer. Information on the significant necessary characteristics in a country can be found at the national Product Information Contact (Link: <http://ec.europa.eu/Docs-Room/documents/4170/attachments/1/translations/en/renditions/native>).

Our service to you.

„We are a reliable partner, one that will stand at your side and address your individual requirements with advice and action.“

By implementing the fischer process system (fPS) we offer you the quickest and most efficient service.

17

Global presence with the fischer international sales team

- One-on-one assistance from multi lingual staff.
- Immediate information and individual solutions regarding the widest range of fixings and fasteners worldwide.
- 50 own subsidiaries and distribution to more than 100 countries worldwide.
- Visit organization A - Z and training programs.

Qualified technical consulting from the fischer technical team

- Support for engineers, consultants and craftsmen.
- More than 130 engineers worldwide give legally compliant technical advice and product recommendations.
- Services include test installations, pull-out tests, individual designs and comparative calculations.
- Special solutions in the scope of fixing technology.

Competence and innovation through own research, development and production

- Market research of trends and customer requirements.
- Own research and development teams for chemical, steel and plastic fastenings.
- In-house tool making, special machine construction and production facilities for total process control.
- fischer Process System (FPS) ensures innovative and high quality products.

17

Wide range of fastening and supplementary products for professional and DIY customers

- Comprehensive assortment of chemical, steel and plastic fastenings.
- Supplementary ranges of installation systems, construction chemicals, wood screws, drill bits, facade systems etc.
- Broadest coverage of applications.
- Standard products, project-based solutions and customer-specific developments.

Professional training sessions with the fischer academy

- Wide range of seminars for craftsmen, engineers and specialist dealers.
- Fixing technology at its best based on over 30 years of training experience.
- Theoretical knowledge and practical exercises in line with the demands of the approval.
- Full service programme in modern training rooms, including accomodation.
- Numerous seminar offers online or on site.

17

FiXperience design and construction software for demanding applications

- Design software for planners and structural engineers.
- Modular program including engineering software and application modules.
- Based on international design standards (ETAG 001, EC1, EC2, EC3, EC5), including national application documents.
- Free choice of all common power and measurement units.
- Graphical representation in 3D, 2D, move, 360° rotate, pan, tilt, zoom.

Catalogues for other product groups.

Catalogue Installation Systems

All facts about the fischer installation systems and their applications.

- Presentation of products and systems with detailed technical data and illustrations.
- Anchors suitable to fix installation system components.
- Application support.
- Basic knowledge of installation systems.
- Available design software.

→ Order now: info@fischer.com.

Catalogue Screws

All facts about the fischer screw range and their applications.

- Presentation of products with detailed technical data and illustrations.
- Load tables for construction screws.
- Application support.
- Basic knowledge about connections with screws
- Available design software.

→ Order now: info@fischer.com.

International FireStop Handbook

All facts about the fischer FireStop systems and their applications.

- Presentation of products and systems with detailed technical data and accordance to relevant international standards.
- Anchors suitable to fix sprinkler systems.
- Application support.
- Basic knowledge about active and passive fire prevention as well as air and acoustic sealing systems.

→ Order now: info@fischer.com.

17

Catalogue Façade Systems

All facts about the fischer façade range and their applications.

- Presentation of Zykon panel anchor, machine technology, drill bits, subframes, general fixing products and accessories with detailed technical data and illustrations.
- Application support.
- Basic knowledge about undercut anchors and subframe systems.
- Available design software.
